PRINCIPLES OF WORKING OF AUTOMATED HEMATOLOGY ANALYZER Hematology analyzers are used to count and identify blood cells at high speed and accuracy. During the 1950s, laboratory technicians counted each individual blood cell underneath a microscope. Tedious and inconsistent, this was replaced with the first, very basic hematology analyzer, engineered by Wallace H. Coulter. The early hematology analyzers relied on Coulter's Principle. However, they have evolved to encompass numerous techniques. Hematology analyzer - Wikipedia An automated analyser is a medical laboratory instrument designed to measure different chemicals and other characteristics in a number of biological samples quickly, with minimal human assistance. These measured properties of blood and other fluids may be useful in the diagnosis of disease.
