This collection presents educational assessment research from Latin America, adding to a relatively small but growing body of research considering educational assessment and evaluation issues in this large region. The predominance of Chile reflects its early highly centralized education system, and the fact that it adopted national testing before other Latin American countries. It was also an early participant in international assessment programmes. Other countries have followed the trend of implementing national testing, and to a lesser extent participating in international surveys. The complementary development of technical expertise in quantitative research methods has enabled extensive analysis of the large data sets generated by these testing and assessment programmes. Taken together, the evidence reported provides a means not only of reviewing educational quality issues in Latin America, but also of facilitating comparisons that allow the context specificity of equivalent research conducted in western

developed countries to be considered. The chapters in this book were originally published as a special issue of *Assessment in Education: Principles, Policy and Practice*.

This book presents a narrative inquiry into the cross-cultural educational experiences of a family living in Hong Kong and Toronto, Canada. At heart a go-and-return story, Lau reflects on the difficulties of adjusting to the different practices of teaching and learning in two places with their own distinctive cultures. Ever more prescient now amid the current social and political upheavals in Hong Kong and around the world, the book considers the profound impacts such transitions have on families. By delving into the challenges of living, working, and learning across cultures, he reflects upon the deep-rooted values in both family and school landscapes to gain new insights about educational and cultural practices in Hong Kong and Toronto.

The issues raised by the role of language in education are some of the most important and contentious faced by education systems across the globe. Language is embedded in the concepts of nationhood and identity, and is therefore directly linked to the very social and political fabric of a country. In a climate of increasing globalisation, development and mobility of populations, nations around the world are concerned with the tension between cultivating a sense of cultural and linguistic cohesion and making use of the linguistic diversity that exists in every country and region. This book examines the implications and impacts, the dilemmas and potential for language education in relation to education systems and wider society. Split into three key parts, it considers: *current issues in language education, including the role of language in maintaining power and inequalities, in encouraging participation and inclusion and in challenging the status quo; *different approaches to language education around the world; *the potential for language to provide opportunities for the disadvantaged, illustrated by case studies of three cities. This recent volume of the internationally respected World Yearbook of Education continues the tradition of offering a wide range of international perspectives from leading commentators on a universal concern. The material amassed here will be essential reading for teacher educators, education researchers and school leaders across the world.

Primary Science: Promoting positive attitudes to conceptual learning is a full colour, core textbook to support, inform and inspire anyone training to teach Science at primary level. This book is a new kind of text linking subject knowledge and pedagogy in one package, rather than treating them as separate entities. The text aims to encourage trainee teachers to teach scientific concepts in contexts which will inspire the children to look at the world in new and intriguing ways, rather than presenting it as a list of facts and definitions. Encouraging critical reflection and offering practical support, this book will help trainee teachers to overcome negative attitudes to Science. The two part structure of the book first presents insights into the nature of science and science education, exploring issues such as the value and purpose of teaching Science in the primary school and the value of scientific enquiry. It then moves on to cover subject knowledge, relating it to pedagogy.

Foucault and School Leadership Research illustrates the application of Foucauldian theory to an educational leadership research context, thus staging the ways a researcher negotiates the methodological tensions and contradictions in the conduct of qualitative inquiry within education research. The book draws on an empirical study of a multi-site school collaborative that investigates relations of power within the unfolding network among the various leadership hierarchies in school governance. The book is anchored around a narrative dramatization that the author, Denise Mifsud, crafts from her data, using the dramatic play as a medium to present her research findings so as to show rather than just tell readers about network leadership dynamics. Mifsud's innovative use of dramatization to communicate her findings and analysis serves to problematize the representation of qualitative research, as well as to incorporate researcher interpretation and explicate the intertwining nature of theory and methodology. Through the use of Foucauldian theory, mainly his notions of webs of power, discipline, governmentality, discourse, and subjectification, the research narrative critiques and problematizes traditional understandings of educational leadership. The book focuses on and demonstrates the challenging enterprise of the art of theory application in method by outlining the epistemological, operational and analytical challenges encountered: the application of Foucauldian concepts in education research contexts; the adaptation of methodological and theoretical concerns; in addition to showing how the quality of research outcomes is shaped by social theory.

Assessment of student learning outcomes (ASLO) is one of the key activities in teaching and learning. It serves as the source of information in determining the quality of education at the classroom and national levels. Results from any assessment have an influence on decision making, on policy development related to improving individual student achievement, and to ensure the equity and quality of an education system. ASLO provides teachers and school heads with information for making decisions regarding a students' progress. The information allows teachers and school heads to understand a students' performance better. This report reviews ASLO in three South Asian countries---Bangladesh, Nepal, and Sri Lanka---with a focus on public examinations, national assessment, school-based assessment, and classroom assessment practiced in these countries.

Until the nineteenth century, music occupied a marginal place in British universities. Degrees were awarded by Oxford and Cambridge, but students (and often professors) were not resident, and there were few formal lectures. It was not until a benefaction initiated the creation of a professorship of music at the University of Edinburgh, in the early nineteenth century, that the idea of music as a university discipline commanded serious consideration. The debates that ensued considered not only music's identity as art and science, but also the broader function of the university within education and society. Rosemary Golding traces the responses of some of the key players in musical and academic culture to the problems surrounding the establishment of music as an academic discipline. The focus is on four universities: Edinburgh, Oxford, Cambridge and London. The different institutional contexts, and the approaches taken to music in each university, showcase the various issues surrounding music's academic identity, as well as wider problems of status and professionalism. In examining the way music challenged conceptions of education and professional identity in the nineteenth century, the book also sheds light on the way the academic study of music continues to challenge modern approaches to music and university education.
