SCHMITT NYLAH

1995 Annual Mercatus Center at George Mason University

A consensus has recently emerged among academics and policymakers that US copyright law has fallen out of balance. Lawmakers have responded by taking up proposals to reform the Copyright Act. But how should they proceed? This book offers a new and insightful view of copyright, marking the path toward a world less encumbered by legal restrictions and yet richer in art, music, and other expressive works. Two opposing viewpoints have driven the debate over copyright policy. One side questions copyright for the same reasons it questions all restraints on freedoms of expression, and dismisses copyright, like other forms of property, as a mere plaything of political forces. The opposing side regards copyrights as property rights that deserve—like rights in houses, cars, and other forms of property—the fullest protection of the law. Each of these viewpoints defends important truths. Both fail, however, to capture the essence of copyright. In Intellectual

Privilege, Tom W. Bell reveals copyright as a statutory privilege that threatens our natural and constitutional rights. From this fresh perspective come fresh solutions to copyright's problems. Published by the Mercatus Center at George Mason University.

A serious problem facing museum professionals is the protection of collections from damage due to insects. This book describes successful insect eradication procedures developed at the Getty Conservation Institute and elsewhere, whereby objects are held in an atmosphere of either nitrogen or argon containing less than 1000 ppm of oxygen—a process known as anoxia—or in an atmosphere of more than 60 percent carbon dioxide. Techniques, materials, and operating parameters are described in detail. The book also discusses adoption of this preservation technology, presenting the development of these methods and instructions for building and upgrading treatment systems, as well as recent case histories. The Research in Conservation reference series presents the findings of research conducted by the Getty Conservation Institute and its individual and institutional research partners, as well as state-of-the-art reviews of

conservation literature. Each volume covers a topic of current interest to conservators and conservation scientists.

The Internet has often been labeled a disruptive technology, and nowhere has that been more clearly the case than in the field of intellectual property (IP) law. Although debates over IP policy have raged in academic circles and law and economics journals for decades, with the rise of the Internet, IP issues have captured the public's collective attention like never before. Suddenly, the teenage creator of file-swapping sensation Napster appeared on the cover of Time magazine as the mass media took notice of an explosion of interest in digital downloads, CD burning, and widespread peer-to-peer file sharing among the general public. But the mass movement to share songs and other digital content online was met with a firestorm of criticism from copyright and

patent holders, who struck back with a vengeance, filing lawsuits and pursuing legislative and regulatory remedies for what they regarded as intellectual property piracy on a scale never before envisioned. This debate has sparked a newfound interest in timeless questions about the nature of intellectual property and how it should be protected, including why do we protect intellectual property at all; do we really have "property rights" in our intangible creations the same way we have property rights to our homes and our land; aren't there better ways to encourage artistic creation and scientific discovery than through the use of copyright and patent laws that protect a limited monopoly? Copy Fights presents a thought-provoking exploration of these questions.
