*Computational and
Corpus-Based
Phraseology* John
Benjamins Publishing
Company

Discourse topics are a
frequently mentioned
but rarely
operationalised
concept in linguistics.
Taking a text linguistic
approach and defining
discourse topics as
clustering of
concepts, this book
examines and
compares methods for

investigating topic
boundaries, topic
identification and topic
development. The first
book to be devoted to
topics in extended
discourse, *Discourse
Topics* examines topics
in several genres and
generates new insights
into the nature of
discourse topics that
challenge the status
quo. It is essential
reading for researchers
in linguistics, discourse
analysis, natural
language processing
and psychology whose
work concerns topics.

Storytelling is a
fundamental mode of

everyday interaction. This book is based upon the Narrative Corpus (NC), a specialized corpus of naturally occurring narratives, and provides new paths for its study. Christoph Rühlemann uses the NC's narrative-specific annotation and XPath and XQuery, query languages that allow the retrieval of complex data structures, to facilitate large-scale quantitative investigations into how narrators and recipients collaborate in storytelling. Empirical analyses are validated using R, a programming language and environment for statistical computing and graphics. Using this unique data and methodological base, Rühlemann reveals new insights, including

the discovery of turntaking patterns specific to narrative, the first investigation of textual colligation in spoken data, the unearthing of how speech reports, as discourse units, form striking patterns at utterance level, and the identification of the story climax as the sequential context in which recipient dialogue is preferentially positioned.

A Synthesis of Corpus and Literary Perspectives Springer

Textual Patterns Key Words and Corpus Analysis in Language Education John Benjamins Publishing

Academic Vocabulary in Learner Writing Springer

Springer
Offers a wide-ranging overview of the issues

and research approaches in the diverse field of applied linguistics Applied linguistics is an interdisciplinary field that identifies, examines, and seeks solutions to real-life language-related issues. Such issues often occur in situations of language contact and technological innovation, where language problems can range from explaining misunderstandings in face-to-face oral conversation to designing automated speech recognition systems for business. The Concise Encyclopedia of Applied Linguistics includes entries on the fundamentals of the discipline, introducing readers to the concepts, research,

and methods used by applied linguists working in the field. This succinct, reader-friendly volume offers a collection of entries on a range of language problems and the analytic approaches used to address them. This abridged reference work has been compiled from the most-accessed entries from The Encyclopedia of Applied Linguistics (www.encyclopediaofappliedlinguistics.com), the more extensive volume which is available in print and digital format in 1000 libraries spanning 50 countries worldwide. Alphabetically-organized and updated entries help readers gain an understanding of the essentials of the field with entries on topics such as

multilingualism, language policy and planning, language assessment and testing, translation and interpreting, and many others. Accessible for readers who are new to applied linguistics, *The Concise Encyclopedia of Applied Linguistics*: Includes entries written by experts in a broad range of areas within applied linguistics Explains the theory and research approaches used in the field for analysis of language, language use, and contexts of language use Demonstrates the connections among theory, research, and practice in the study of language issues Provides a perfect starting point for pursuing essential topics in applied linguistics Designed to

offer readers an introduction to the range of topics and approaches within the field, *The Concise Encyclopedia of Applied Linguistics* is ideal for new students of applied linguistics and for researchers in the field.

Planes, Trains and Automated Text

Analysis Rodopi

Informed by the

APPRAISAL Theory, this book analyses the

construction of evaluative meanings in

web-based English

tourism texts (ETTs). It

investigates the

semantic potentiality of

evaluative meaning in

English tourism texts

on Chinese, British and

American websites, as

well as the similarities

and differences in

constructing evaluation

among the three

varieties of ETTs. It is

aimed to discover the characteristic preferences for particular appraisal resources in constructing evaluation in native ETTs, and to find out the deficiencies in using evaluation in ETTs on Chinese websites. Two analytical procedures are adopted: first, based on large corpus files, it discusses the semantic potentiality for evaluative meaning in the three types of ETTs; then, various evaluation features are explored in detail concerning resources of ATTITUDE, ENGAGEMENT and GRADUATION under the APPRAISAL framework. All discussions are conducted by combining quantitative statistics with qualitative analyses.

Theoretically, the study modifies and extends some aspects of the APPRAISAL Theory so as to facilitate the analysis of evaluation in tourism discourse. The study is also instructive for Chinese ESL/EFL writers in writing English tourist texts or translating Chinese tourism texts into English.

Using Corpus Analysis to Describe Discourse Structure Springer

Nature

An interactive, multimedia text that introduces students to reading and writing at the college level.

Pragmatics of

Discourse John

Benjamins Publishing

Methods of

approaching the study of discourse have developed rapidly in the last ten years, influenced by a

growing interdisciplinary spirit among linguistics and anthropology, sociology, cognitive and cultural psychology and cultural studies, as well as among established sub-fields within linguistics itself. Among the more recent developments are an increasing 'critical' turn in discourse analysis, a growing interest in historical, ethnographic and corpus-based approaches to discourse, more concern with the social contexts in which discourse occurs, the social actions that it is used to take and the identities that are constructed through it, as well as a reevaluation of what counts as 'discourse' to include multi-modal texts and

interaction. Advances in Discourse Studies brings together contributions from leading scholars in the field, investigating the historical and theoretical relationships between new advances in discourse studies and pointing towards new directions for the future of the discipline. Featuring discussion questions, classroom projects and recommended readings at the end of each section, as well as case studies illustrating each approach discussed, this is an invaluable resource for students of interdisciplinary discourse analysis. *Mapping Landscapes in Transformation* Routledge
 János S. Petőfi (1931-2013) was one

of the founders of Text Linguistics in Germany in the early '70s. He developed different text models, the most famous of which were the Text Structure World Structure Theory (TeSWeST) and Semiotic Textology. In this volume, some of his colleagues and disciples discuss his theoretical contributions to prove the enormous impact of his thoughts in the fields of linguistics, literary theory, rhetoric and semiotics. The essays here consider the notion of coherence, which Petőfi deemed to be the only sufficient condition for textuality, the relationships between his textual models and disciplines such as cognitive, computational and corpus linguistics, and

his contributions to the analysis of literary and multimedial texts. *The Word on College Reading and Writing* Textual Patterns Key Words and Corpus Analysis in Language Education This book provides a systematic, scientific explanation of natural language as well as the author's Communicative Positioning Program and Text Representation Systems (CPP-TRS) framework. The framework is a visual language based on a highly articulated Theory of Text Comprehension and a related Theory of Text Compression, and is presented in a way that is both accessible to an audience not familiar with it yet informative for those

who are. The approach considers natural language as an information state, reflecting its inherent complexity. The book proceeds towards the organising of a theoretical framework, based on a new way of viewing language, in terms of a Quantum Linguistics based on quantitative and qualitative reasoning about communication via natural language.

Publishing

Corpus linguistics has had a revolutionary impact on grammar and discourse research. Not only has it opened up entirely new theoretical perspectives and methodological possibilities for both

fields, but it has also to a considerable extent erased the boundaries that have traditionally been drawn between them. This book showcases a variety of current corpus-based approaches to the study of grammar and discourse, and makes a case for seeing grammar and discourse as fundamentally inter-related phenomena. The book features contributions from leading experts in cognitive linguistics, construction grammar, critical discourse studies, genre and register analysis, phraseology, language learning and teaching, languages for specific purposes, second language acquisition, sociolinguistics, systemic functional linguistics and text

linguistics. An essential reference point for future research, *Corpora, Grammar and Discourse* has been edited in honour of Susan Hunston, whose own work has consistently pushed at the boundaries of corpus-based research on grammar and discourse for over three decades.

Patterns of Text John Benjamins Publishing
The Routledge Handbook of Chinese Translation presents expert and new research in analysing and solving translation problems centred on the Chinese language in translation. The Handbook includes both a review of and a distinctive approach to key themes in Chinese translation, such as translatability and equivalence, extraction

of collocation, and translation from parallel and comparable corpora. In doing so, it undertakes to synthesise existing knowledge in Chinese translation, develops new frameworks for analysing Chinese translation problems, and explains translation theory appropriate to the Chinese context. The Routledge Handbook of Chinese Translation is an essential reference work for advanced undergraduate and postgraduate students and scholars actively researching in this area.

The Concise Encyclopedia of Applied Linguistics Bloomsbury Publishing
Corpus Linguistics in Literary Analysis provides a theoretical introduction to corpus

stylistics and also demonstrates its application by presenting corpus stylistic analyses of literary texts and corpora. The first part of the book addresses theoretical issues such as the relationship between subjectivity and objectivity in corpus linguistic analyses, criteria for the evaluation of results from corpus linguistic analyses and also discusses units of meaning in language. The second part of the book takes this theory and applies it to *Northanger Abbey* by Jane Austen and to two corpora consisting of 1) Austen's six novels and 2) texts that are contemporary with Austen. The analyses demonstrate the impact of various features of text on

literary meanings and how corpus tools can extract new critical angles. This book will be a key read for upper level undergraduates and postgraduates working in corpus linguistics and in stylistics on linguistics and language studies courses.

Text Mining with R

Springer

The State of Stylistics contains a broad collection of papers that investigate how stylistics has evolved throughout the late 20th and early 21st centuries. In so doing, it considers how stylisticians currently perceive their own respective fields of enquiry. It also defines what stylistics is, and how we might use it in research and teaching.
The Routledge Handbook of Chinese

Translation Springer
Nature
Textual Patterns
introduces corpus
resources, tools and
analytic frameworks of
central relevance to
language teachers and
teacher educators.
Specifically it shows
how key word analysis,
combined with the
systematic study of
vocabulary and genre,
can form the basis for
a corpus informed
approach to language
teaching. The first part
of the book gives the
reader a strong
grounding in the way in
which language
teachers can use
corpus analysis tools
(wordlists,
concordances, key
words) to describe
language patterns in
general and text
patterns in particular.
The second section
presents a series of

case studies which
show how a key word /
corpus informed
approach to language
education can work in
practice. The case
studies include:
General language
education (i.e. students
in national education
systems and those
following international
examination
programmes), foreign
languages for
academic purposes,
literature in language
education, business
and professional
communication, and
cultural studies in
language education.

Publishing
This book constitutes
the thoroughly
refereed post-
workshop proceedings
of the Third
International
Symposium, SETE
2018, held in

conjunction with ICWL 2018, Chiang Mai, Thailand, in August 2018. The 23 full and 3 short papers were carefully reviewed and selected from 51 submissions. The papers have been organized in the following topical sections: Emerging Technologies of Design, Model and Framework of Learning Systems; Emerging Technologies Support for Intelligent Tutoring; Emerging Technologies Support for Game-Based and Joyful Learning; Emerging Technologies of Pedagogical Issues; UMLL (International Symposium on User Modeling and Language Learning); ETLTL (International Workshop on Educational Technology for

Language and Translation Learning)
Academic Evaluation
 "O'Reilly Media, Inc."
 In the context of increased movement across borders, this book examines how key cultural texts and concepts are transferred between nations and languages as well as across different media. The texts examined in this book are considered fundamental to their source culture and can also take on a particular relevance to other (target) cultures. The chapters investigate cultural transfers and differences realised through translation and reflect critically upon the implications of these with regard to matters of cultural identity. The book offers an important

contribution to cultural approaches in translation studies, with ramifications across different disciplines, including literary studies, history, philosophy, and gender studies. The chapters offer a range of cultural and methodological frameworks and are written by scholars from a variety of language and cultural backgrounds, Western and Eastern.

**Corpus
Investigations into
Environment**

Journals John Benjamins Publishing
The relational complexity of urban and rural landscapes in space and in time The development of historical geographical information systems (HGIS) and other methods from the

digital humanities have revolutionised historical research on cultural landscapes. Additionally, the opening up of increasingly diverse collections of source material, often incomplete and difficult to interpret, has led to methodologically innovative experiments. One of today's major challenges, however, concerns the concepts and tools to be deployed for mapping processes of transformation—that is, interpreting and imagining the relational complexity of urban and rural landscapes, both in space and in time, at micro- and macro-scale. Mapping Landscapes in Transformation gathers experts from different

disciplines, active in the fields of historical geography, urban and landscape history, archaeology and heritage conservation. They are specialised in a wide variety of space-time contexts, including regions within Europe, Asia, and the Americas, and periods from antiquity to the 21st century.

University), Ralf Vandam and Jeroen Poblome (KU Leuven), Reinout Klaarenbeek (KU Leuven), Sanne Maekelberg (KU Leuven), Steffen Nijhuis (TU Delft), Cristina Purcar (TU Cluj-Napoca), Changxue Shu (KU Leuven, FWO), Bram Vannieuwenhuyze (University of Amsterdam), May Yuan and Arlo McKee (University of Texas, Dallas) Ebook available in Open Access. This publication is GPRC-labeled (Guaranteed Peer-Reviewed Content).

Communication Patterns and Textual Forms Routledge Interdisciplinary Research Discourse: Corpus Investigations into Environment Journals provides cutting-edge insights

into the nature of communication in interdisciplinary research domains. Using a corpus of nearly 12,000 articles taken from 11 journals, this book addresses the key questions that surround writing for an interdisciplinary audience. This book also explores: the ways in which writers write if they are writing for an interdisciplinary audience as well as for a specialist disciplinary audience; the different natures and instances of the term 'interdisciplinarity'; and whether an analysis of the rhetorical contexts in which research is relayed to interdisciplinary audiences is critical to understanding interdisciplinary research activities and communications.

Written by two leading figures in the field of Corpus Linguistics, this is an essential text for researchers and upper-level undergraduates working in the areas of Corpus Linguistics, Discourse Analysis and Linguistics in areas of interdisciplinary communication. *PALA 26* John Benjamins Publishing The Discourse of Customer Service Tweets studies the discursive and pragmatic features of customer service interactions, making use of a corpus of over 1.5 million tweets from more than thirty different companies. With Twitter being used as a professional service channel by many transport operators, this book features an empirical analysis of British and

Irish train companies and airlines that provide updates and travel assistance on the platform, often on a 24/7 basis. From managing crises in the midst of strike action to ensuring passengers feel comfortable on board, Twitter allows transport operators to communicate with their customers in real time. Analysing patterns of language use as well as platform specific features for their communicative functions, Ursula Lutzky enhances our understanding of customers' linguistic expectations on Twitter and of what makes for successful or unsuccessful interaction. Of interest to anyone researching discourse analysis, business communication and

social media, this book's findings pave the way for practical applications in customer service.

Text Linguistics, Literary Theory and Semiotics Routledge

This book deals with the construction of the 'other' in European media at a time when the recently expanded EU is facing new political, economic and social challenges. The aim of the book is to document the diverse discursive forms of othering, ranging from differentiation to discrimination, that are directed against various 'other Europeans' in both institutionalized media and such non-elite semi-public contexts as discussion forums and citizen blogs. Drawing on data from British, Polish, French, Czech,

Italian, Hungarian, Spanish and Estonian contexts, the individual papers investigate how various social groupings – regions, nations, ethnicities, communities, cultures – are discursively constructed as ‘outsiders’ rather than ‘insiders’, as ‘them’

rather than ‘us’. While most of the papers are grounded in linguistics and critical discourse studies, the book will also appeal to numerous other social scientists interested in the interface between language, media and social issues.
