ALANA VALENTINE

Essays of a Taboo-stalker Scholastic Inc.
Examining the social roots of an environmental crisis, this study demonstrates how environmental degradation goes hand-in-hand with the history of the enclosure of the local commons, a process which fragmented communities from medieval Britain to present-day Brazil. *Social Responsibility, Entrepreneurship and the Common Good* Vintage Canada
This book gives an overview of the

problem of providing economics with a biophysical foundation, explains the importance of energy in economic valuation and aims to develop novel ways of evaluating the physical constraints of our planet and the services provided by the natural environment.

The Ostrich Factor

Urbana : University of Illinois Press
The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of

your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. The Great Mental Models: General Thinking Concepts is the first book in The Great Mental Models series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. This volume details nine of the most versatile, all-purpose mental models you can use right away to improve your decision making, productivity, and how clearly you see the world. You will discover what forces govern the universe and how to focus your efforts so you can harness them to your

advantage, rather than fight with them or worse yet- ignore them. Upgrade your mental toolbox and get the first volume today. AUTHOR BIOGRAPHY Farnam Street (FS) is one of the world's fastest growing websites, dedicated to helping our readers master the best of what other people have already figured out. We curate, examine and explore the timeless ideas and mental models that history's brightest minds have used to live lives of purpose. Our readers include students, teachers, CEOs, coaches, athletes, artists, leaders, followers, politicians and more. They're not defined by gender, age, income, or politics but rather by a shared passion for

avoiding problems, making better decisions, and lifelong learning. AUTHOR HOME Ottawa, Ontario, Canada

Ancient Guides to Living with Nature

Oxford University Press
This best-selling text continues to fill an existing gap in the literature taught in applied ethics courses. As a growing number of courses that include the perspectives of diverse cultures are being added to the university curriculum, texts are needed that represent more multicultural and diverse histories and backgrounds. This new edition enhances gender coverage, as nearly half of the pieces are now authored by women. The new edition also increases the

percentage of pieces written by those who come from a non-Western background. It offers twelve up-to-date articles (not found in previous editions) on human rights, environmental ethics, poverty, war and violence, gender, race, euthanasia, and abortion; all of these topics are addressed from Western and non-Western perspectives.

An Introduction to Population Geographies W. W.

Norton & Company
Environment and Society connects the core themes of environmental studies to the urgent issues and debates of the twenty-first century. In an era marked by climate change, rapid urbanization, and resource scarcity, environmental studies

has emerged as a crucial arena of study. Assembling canonical and contemporary texts, this volume presents a systematic survey of concepts and issues central to the environment in society, such as: social mobilization on behalf of environmental objectives; the relationships between human population, economic growth and stresses on the planet's natural resources; debates about the relative effects of collective and individual action; and unequal distribution of the social costs of environmental degradation. Organized around key themes, with each section featuring questions for debate and suggestions for further

reading, the book introduces students to the history of environmental studies, and demonstrates how the field's interdisciplinary approach uniquely engages the essential issues of the present. Former Members of Parliament Speak Out about Canada's Failing Democracy Routledge 'One of the most important books I've read in years' Brian Eno We are losing the commons. Austerity and neoliberal policies have depleted our shared wealth; our national utilities have been sold off to foreign conglomerates, social housing is almost non-existent, our parks are cordoned off for private events and our national art galleries are sponsored by banks and oil

companies. This plunder deprives us all of our common rights, recognized as far back as the Magna Carta and the Charter of the Forest of 1217, to share fairly and equitably in our public wealth. Guy Standing leads us through a new appraisal of the commons, stemming from the medieval concept of common land reserved in ancient law from marauding barons, to his modern reappraisal of the resources we all hold in common - a brilliant new synthesis that crystallises quite how much public wealth has been redirected to the 1% in recent decades through the state-approved exploitation of everything from our land to our state housing, health and

benefit systems, to our justice system, schools, newspapers and even the air we breathe. Plunder of the Commons proposes a charter for a new form of commoning, of remembering, guarding and sharing that which belongs to us all, to slash inequality and soothe our current political instability.

The Limits to Growth

Living within Limits Ecology, Economics, and Population Taboos An Introduction to Population Geographies provides a foundation to the incredibly diverse, topical and interesting field of twenty-first-century population geography. It establishes the substantive concerns of the subdiscipline,

acknowledges the sheer diversity of its approaches, key concepts and theories and engages with the resulting major areas of academic debate that stem from this richness. Written in an accessible style and assuming little prior knowledge of topics covered, yet drawing on a wide range of diverse academic literature, the book's particular originality comes from its extended definition of population geography that locates it firmly within the multiple geographies of the life course. Consequently, issues such as childhood and adulthood, family dynamics, ageing, everyday mobilities, morbidity and differential ability assume a prominent

place alongside the classic population geography triumvirate of births, migrations and deaths. This broader framing of the field allows the book to address more holistically aspects of lives across space often provided little attention in current textbooks. Particular note is given to how these lives are shaped through hybrid social, biological and individual arenas of differential life course experience. By engaging with traditional quantitative perspectives and newer qualitative insights, the authors engage students from the quantitative macro scale of population to the micro individual scale. Aimed at higher-level undergraduate and graduate students,

this introductory text provides a well-developed pedagogy, including case studies that illustrate theory, concepts and issues.

Plunder of the

Commons Changing
Suns Press

"We fail to mandate economic sanity," writes Garrett Hardin, "because our brains are addled by...compassion." With such startling assertions, Hardin has cut a swathe through the field of ecology for decades, winning a reputation as a fearless and original thinker. A prominent biologist, ecological philosopher, and keen student of human population control, Hardin now offers the finest summation of his work to date, with an eloquent argument for accepting the limits of

the earth's resources--and the hard choices we must make to live within them. In *Living Within Limits*, Hardin focuses on the neglected problem of overpopulation, making a forceful case for dramatically changing the way we live in and manage our world. Our world itself, he writes, is in the dilemma of the lifeboat: it can only hold a certain number of people before it sinks--not everyone can be saved. The old idea of progress and limitless growth misses the point that the earth (and each part of it) has a limited carrying capacity; sentimentality should not cloud our ability to take necessary steps to limit population. But Hardin refutes the notion that goodwill

and voluntary restraints will be enough. Instead, nations where population is growing must suffer the consequences alone. Too often, he writes, we operate on the faulty principle of shared costs matched with private profits. In Hardin's famous essay, "The Tragedy of the Commons," he showed how a village common pasture suffers from overgrazing because each villager puts as many cattle on it as possible--since the costs of grazing are shared by everyone, but the profits go to the individual. The metaphor applies to global ecology, he argues, making a powerful case for closed borders and an end to immigration from poor nations to

rich ones. "The production of human beings is the result of very localized human actions; corrective action must be local....Globalizing the 'population problem' would only ensure that it would never be solved." Hardin does not shrink from the startling implications of his argument, as he criticizes the shipment of food to overpopulated regions and asserts that coercion in population control is inevitable. But he also proposes a free flow of information across boundaries, to allow each state to help itself. "The time-honored practice of pollute and move on is no longer acceptable," Hardin tells us. We now fill the globe, and we have no where else to go. In this powerful

book, one of our leading ecological philosophers points out the hard choices we must make--and the solutions we have been afraid to consider. Living with Death, Competition, and Triage Routledge

An objective, comprehensive, and accessible examination of today's most crucial problem: preserving the environment in the face of society's insatiable demand for energy. In *Energy at the Crossroads*, Vaclav Smil considers the twenty-first century's crucial question: how to reconcile the modern world's unceasing demand for energy with the absolute necessity to preserve the integrity of the biosphere. With this book he offers a comprehensive,

accessible guide to today's complex energy issues—how to think clearly and logically about what is possible and what is desirable in our energy future. After a century of unprecedented production growth, technical innovation, and expanded consumption, the world faces a number of critical energy challenges arising from unequal resource distribution, changing demand patterns, and environmental limitations. The fundamental message of *Energy at the Crossroads* is that our dependence on fossil fuels must be reduced not because of any imminent resource shortages but because the widespread burning of oil, coal, and natural gas damages

the biosphere and presents increasing economic and security problems as the world relies on more expensive supplies and Middle Eastern crude oil. Smil begins with an overview of the twentieth century's long-term trends and achievements in energy production. He then discusses energy prices, the real cost of energy, and "energy linkages"—the effect energy issues have on the economy, on quality of life, on the environment, and in wartime. He discusses the pitfalls of forecasting, giving many examples of failed predictions and showing that unexpected events can disprove complex models. And he examines the pros and cons not only of fossil

fuels but also of alternative fuels such as hydroenergy, biomass energy, wind power, and solar power. Finally, he considers the future, focusing on what really matters, what works, what is realistic, and which outcomes are most desirable.

An Anthology in Environmental Ethics

Routledge
Garrett Hardin's seminal essay "The Tragedy of the Commons" appeared in 1968 and has been at the center of the debate on commonly owned ground or resources such as Western public grazing or the oceans. This is the second edition of a book exploring the issues raised in Hardin's essay. As scarce resources are increasingly strained. It

is ever more crucial to identify those resources which are held in common and are therefore prone to "tragic" waste and abuses. The essay in this volume focus on alternate institutional approaches to managing these resources to prevent such tragedy.

The Choices That Shape Our Future
Stanford University Press

Our world is overpopulated. This fact lies outside of the typical activist's perspective and doesn't fit into society's dominant anthropocentric worldview. When it comes to our use of natural resources, we are taught to consider issues related to consumption such as energy efficiency and

recycling. However, the number of people - and how fast that number is growing - is a more important factor. More people consume more resources, need more services, produce more waste, and create more world conflict as resources diminish.

Working on downstream issues, such as saving the environment, feeding the hungry, and ending homelessness, is noble but ineffective and inefficient without also working to solve the primary cause of these and other important issues. In *Move Upstream: A Call to Solve Overpopulation*, Karen Shragg challenges social and environmental activists to stop working downstream and take the problem of overpopulation

seriously. She also provides compassionate ideas to solve the problem.

PRAISE FOR MOVE

UPSTREAM "The bravest book on human overpopulation yet. It will open your eyes, even if you have taped them shut. Shocking and

provocative, Move Upstream has the courage to name names and proscribe the simple truth on how to combat the overpopulation crisis." -

Alexandra Paul, actress and activist "A boldly truthful and hopeful book." -World

Population Balance "Karen Shragg has hit the nail on the head of overpopulation denial and offers sensible solutions to this crisis."

-Bruce Phillips of One Planet One Child

The State of

Knowledge at the Turn of the Century Oxford University Press on Demand

An exploration of the interplay between social responsibility, entrepreneurship and the common good which is organized into four sections: business and the common good; educating responsible entrepreneurs; corporate social responsibility (CSR) challenges and the common good; and CSR and

entrepreneurship in emerging economies

The Commons: Its Tragedies and Other Follies Springer

Science & Business Media

Why is incest widely prohibited? Why does the scope of the prohibition vary from society to society? Why does incest occur

despite the prohibition? What are the consequences? To reexamine these questions, this book brings together contributions from the fields of genetics, behavioral biology, primatology, biological and social anthropology, philosophy, and psychiatry.

A Good That Transcends Changing Suns Press
Using the ethical premise that there can be too much of a good thing, an ecologist attempts to find what the limits of medical research should be, where competition and cooperation should be balanced, and how triage should be used in making global decisions
Lives Across Space
Penguin Books

The Greeks and Romans have been charged with destroying the ecosystems within which they lived. In this book, however, M. D. Usher argues rather that we can find in their lives and thought the origin of modern ideas about systems and sustainability, important topics for humans today and in the future. With chapters running the gamut of Greek and Roman experience - from the Presocratics and Plato to Roman agronomy and the Benedictine Rule - Plato's Pigs brings together unlikely bedfellows, both ancient and modern, to reveal surprising connections. Lively prose and liberal use of anecdotal detail, including an afterword

about the author's own experiments with sustainable living on his sheep farm in Vermont, add a strong authorial voice. In short, this is a unique, first-of-its-kind book that is sure to be of interest to anyone working in Classics, environmental studies, philosophy, ecology, or the history of ideas.

The Immigration

Dilemma MIT Press

Earthcare: Readings and Cases in

Environmental Ethics

presents a diverse collection of writings

from a variety of

authors on

environmental ethics,

environmental science,

and the environmental movement overall.

Exploring a broad

range of world views,

religions and

philosophies, David W.

Clowney and Patricia

Promethean Ethics

Beacon Press (MA)

This two-volume

Encyclopedia of Global

Justice, published by

Springer, along with

Springer's book series,

Studies in Global

Justice, is a major

publication venture

toward a

comprehensive

coverage of this timely

topic. The

Encyclopedia is an

international,

interdisciplinary, and

collaborative project,

spanning all the

relevant areas of

scholarship related to

issues of global justice,

and edited and advised

by leading scholars

from around the world.

The wide-ranging

entries present the latest ideas on this complex subject by authors who are at the cutting edge of inquiry. The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come. The entries number around 500 and consist of essays of 300 to 5000 words. The inclusion and length of entries are based on their significance to the topic of global justice, regardless of their importance in other areas.

International and Interdisciplinary Perspectives Springer
International efforts to regulate fertility rates so that populations do not grow beyond the earth's capacity have included technical assistance and capital;

improved health care conditions to lower the risk of infant mortality; increased opportunities to develop literacy; the democratization of governments; and several decades of liberal immigration and refugee policies favoring third world nations. The persistence of high fertility despite international efforts confounds demographers. 'Population Politics' brilliantly dissects the paradigm responsible for the counterproductive efforts of nations and international agencies. Abernethy, a renowned anthropologist, shows why policies hamper the shift to lower fertility. Ireland, Indonesia, Cuba, China, Turkey and Egypt are but a few of the

countries Abernethy examines, showing how economic, sociocultural, and agricultural factors that have caused population growth can be harnessed to stabilize population size. 'Population Politics' is a provocative examination of the influence of aid and liberal immigration policies on world population growth, and often counterproductive to the role of the United States as an industrial power. This volume's uniquely interdisciplinary perspective will enlighten the lay reader, as well as demographers and epidemiologists, conservationists, reproduction and family specialists,

agricultural economists, and public health personnel. Virginia D. Abernethy is professor emeritus of psychiatry (anthropology) at Vanderbilt Medical School and was for 11 years the editor of the scholarly journal 'Population and Environment. Garrett Hardin is emeritus professor of human ecology in the Department of Biological Sciences and the University of California, Santa Barbara. The Palgrave Environmental Reader NYU Press Africa's Middle-Class Motor finds growing evidence that a recent resurgence in the continent's economic well-being has staying power. In his overview article, Harvard

professor Calestous Juma says the emphasis for too long has been on eradicating poverty through aid rather than promoting prosperity through improved infrastructure, education, entrepreneurship, and trade. That is now changing: there is a growing emphasis on policies that produce a middle class. The new African middle class may not have the buying power of a Western middle class but it demands enough goods and services to support stronger economic growth, which, as IMF African Department head Antoinette Sayeh points out, in turn helps the poorest members of society. Oxford University economist Paul Collier

discusses a crucial component of Africa's needed infrastructure: railways. It is a continent eminently suited to rail, development of which has been held back more by political than economic reasons. But even as sub-Saharan African thrives, its largest and most important economy, South Africa, has had an anemic performance in recent years. We also profile Ngozi Okonjo-Iweala, Nigeria's colorful economic czar. "Picture This" mines current trends to predict what Africa will look like a half century from now and "Data Spotlight" looks at increased regional trade in Africa. Elsewhere, Cornell Professor Eswar Prasad, examines a global role reversal in

which emerging, not advanced, economies are displaying resilience in the face of the global economic crisis. The University of Queensland's John Quiggin, who wrote *Zombie Economics*, examines whether it makes sense in many cases to sell public enterprises.

Economists Raghuram Rajan of the University of Chicago and Rodney Ramcharan of the U.S. Federal Reserve find

clues to current asset booms and busts in the behavior of U.S. farmland prices a century ago.

Managing the Commons

International Monetary Fund

Imagines a village in which there are too many people consuming shared resources and discusses the challenge of handling our world's environment safely.
