Miss the old days when the best place in the world was your grandfather's house? Well, rekindle that family spirit through the stories in this book and relive some of those fond memories! Watch as a boy and his grandfather, his "Gumpa", pronounced "GOOM-pah", grow together in the small upstate New York town of Endwell. Laugh as their light hearted enchanting adventures enjoy a fun and carefree Gumpa flair, taking them from barbers to nursing homes to football to homework and oftentimes to Gumpa's house. Learn from Gumpa's unique spin on the world as he teaches valuable lessons about life, love, and self. Be humbled as Gumpa gives of himself without concern, placing the needs of others before his own. As you wonder if he can do and deal with anything, discover no man can take the world on alone. Be inspired when together they must come to grips with their greatest obstacle yet, death. There is nothing quite like the bond shared between grandson and grandfather-because there is nothing quite like the love of a grandparent and ultimately, the love of a family. Read it, and then read it again. Or better yet, go call your grandfather.

There is scarcely a small child in the English speaking western world, particularly the United States of America, who does not recognize the name of Mohamed Atta. He made a name for himself that was horrifyingly notorious, as the ringleader of a 20 man terrorist group, the pilot who flew a hijacked plane laden with terrified passengers, into the North Tower of the World Trade Center. Conversely, there would be many fundamentalist Islamics who revere the name of Mohamed Atta. To them, he goes down in history as a martyr, someone heroic not only to be admired but emulated. This book will show that, at least on the part of Atta and some others involved, this was not only politically/religiously motivated, but was an aircraft assisted suicide. A numerical criminal analysis and profile of all 20 suicide terrorists who carried out the 9/11 attacks, including the lone terrorist who helped coordinate the attacks from overseas, having failed to obtain a visa. He now is a prisoner of the United States government.

West Africa's Women of God examines the history of direct revelation from Emitai, the Supreme Being, which has been central to the Diola religion from before European colonization to the present day. Robert M. Baum charts the evolution of this movement from its origins as an exclusively male tradition to one that is largely female. He traces the response of Diola to the distinct challenges presented by conquest, colonial rule, and the post-colonial era. Looking specifically at the work of the most famous Diola woman prophet, Alinesitoué, Baum addresses the history of prophecy in West Africa and its impact on colonialism, the development of local religious traditions, and the role of women in religious communities.

When Jennifer Arthur gets an inter-galactic message from Nitty the Newfangler, she misinterprets its meaning, so Jenny and her marmalade cat Atta Girl find themselves without warning back on the White World. There is no one to meet them, but they are just in time to witness the brutal kidnap of Morgan the Wonderful Wandering Wohht right from the path to Nitty Gritty's front door, where Jenny and Atta had landed. When Nitty returns, she is shocked to hear about Morgan's ill fate, but reveals that there are more tragedies on the surface of the planet; children have been disappearing from locked and barred homes and in various places right out from under their parents' noses. She also discovers that the powerful alien Chrystal, an irreplaceable part of the Chrystal Gate, is also missing. There is no way, now, for Jenny and Atta to return home. With the help of the gallant Behrrn the Remember, a carved stoned pirate, a parrot named Marvin, a lost boy named Harrell (Rell to his friends) and a Molly Kahdel, an experienced guide, Jennifer and Atta join a group one of the groups dedicated to finding the lost children, Morgan the Wohht, and the Chrystal necessary for their way back home. While with this company, she saves a toddler from falling into a VERY VERY VERY DEEP HOLE, only to fall into it herself. At the bottom, she realizes she has become invisible, unable to feel anything, or even to call for help. She floats to the surface, but is still unable to be seen, to be felt, or even to communicate in any way. Lonely and lost, she floats into one of several misty tunnels which try their hardest to trap her there...

It is perhaps obvious to state that terrorists cannot plan and carry out attacks in the United States if they are unable to enter the country. Yet prior to September 11, while there were efforts to enhance border security, no agency of the U.S. government thought of border security as a tool in the counterterrorism arsenal. Indeed, even after 19 hijackers demonstrated the relative ease of obtaining a U.S. visa and gaining admission into the United States, border security still is not considered a cornerstone of national security policy. We believe, for reasons we discuss in the following pages, that it must be made one. A disorienting fictionalized portrayal of 9/11 mastermind Mohamed Atta and the meaning of madness. Ours is a century of fear. Governments and mass media bombard us with words and images: desert radicals, "rogue states," jihadists, WMDs, existential enemies of freedom. We labor beneath myths that neither address nor describe the present situation, monstrous deceptions produced by a sound bite society. There is no reckoning of actuality, no understanding of the individual lives that inaugurated this echo chamber. In the summer of 1999, Mohamed Atta defended a master's thesis that critiqued the introduction of Western-style skyscrapers in the Middle East and called for the return of the "Islamic-Oriental city." Using this as a departure point, Jarett Kobek's novel ATTA offers a fictionalized psychedelic biography of Mohamed Atta that circles around a simple question: what if 9/11 was as much a matter of architectural criticism as religious terrorism? Following the development of a socially awkward boy into one of history's great villains, Kobek demonstrates the need for a new understanding of global terrorism. Joined in this volume by a second work, "The Whitman of Tikrit"—a radical reimagining of Saddam Hussein's last day before capture—ATTA is a brutal, relentless, and ultimately fearless corrective to ten years of propaganda and pandering.

In his introduction De Vries sketches the canonical setting of the books of Chronicles, especially in relation with Ezra-Nehemiah, and then discusses the redacted and original versions of Chronicles. He describes Chronicles as genealogical and narrative history that tells who/what ideal Israel is, how it has suffered by its unfaithfulness, and how it will remain true Israel by trusting in God.

Ants have always fascinated the nature observer. Reports from ancient Egypt and Mesopotamia indicate that ants interested humans long ago. Myrmecology as a science had its beginning in the last century with great naturalists like Andre, Darwin, Emery, Escherich, Fabre, Fields, Forel, Janet, Karawaiew, McCook, Mayr, Smith, Wasmann and Wheeler. They studied ants as an interesting biological phenomenon, with little thought of the possible beneficial or detrimental effects ants could have on human activities (see Wheeler 1910 as an example). When Europeans began colonizing the New World, serious ant problems occurred. The first reports of pest ants came from Spanish and Portuguese officials of the fifteenth and sixteenth centuries in Trinidad, The West Indies, Central America and South America. Leaf-cutting ants were blamed for making agricultural development almost impossible in many areas. These ants, Atta and Acromyrmex species, are undoubtedly the first ants identified as pests and may be considered to have initiated interest and research in applied myrmecology (Mariconi 1970).

The American economy faces two deep problems: expanding innovation and raising the rate of quality job creation. Both have roots in a neglected problem: the resistance of Legacy economic sectors to innovation. While the U.S. has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology, most of its economy is locked into Legacy sectors defended by technological/ economic/ political/ social paradigms that block competition from disruptive innovations that could challenge their models. Americans like to build technology "covered wagons" and take them "out west" to open new innovation frontiers; we don't head our wagons "back east" to bring innovation to our Legacy sectors. By failing to do so, the economy misses a major opportunity for innovation, which is the bedrock of U.S. competitiveness and its standard of living. Technological Innovation in Legacy Sectors uses a new, unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors: energy, air and auto transport, the electric power grid, buildings, manufacturing, agriculture, health care delivery and higher education, and develops approaches to understand and transform them. It finds both strengths and obstacles to innovation in the national innovation environments - a new concept that combines the innovation system and the broader innovation context - for a group of Asian and European economies. Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process. By increasingly offshoring production, the U.S. is losing important parts of its innovation capacity. "Innovate here, produce here," where the U.S. took all the gains of its strong innovation system at every stage, is being replaced by "innovate here, produce there," which threatens to lead to "produce there, innovate there." To bring innovation to Legacy sectors, authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation. They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations. In the specific case of advanced manufacturing, the production ecosystem can be recreated to reverse "jobless innovation" and add manufacturing-led innovation to the U.S.'s still-strong, research-oriented innovation system.

Omnipresent in virtually all terrestrial ecosystems and of undisputed ecological and economical importance, the study of social insects is an area that continues to attract a vast number of researchers. As a consequence, a huge amount of information about their biology and ecology has accumulated. Distilling this scattered information into a highly focused reference, Food Exploitation by Social Insects: Ecological, Behavioral, and Theoretical Approaches unites traditional behavioral and ecological studies with theoretical and mathematical models. The book covers foraging ecology and behavior of social insects, their communication mechanisms, and theoretical models of important aspects. It examines two different but inseparably interlaced levels of social insect foraging: the macroscopic or colony level and the microscopic or individual level. The chapters include discussions of foraging decisions, patterns and strategies of social insect colonies, and information use and information transfer between workers. The book provides examples of how this biological knowledge can be used as a basis for the construction of mathematical and neural network models that in return may increase understanding of social insect foraging. The contributors provide a fresh look on their topics, covering a wide range of subjects and recent scientific developments that are unprecedented in breadth and depth. The coverage of ants, bees, and wasps in one resource is a unique feature of the book. This taxonomic content combined with the variety of research approaches, allows the book to provide deeper insight into the subject.

On the tenth anniversary of the September 11, 2001 terrorist attacks, David Ray Griffin reviews the troubling questions that remain unanswered 9/11 Ten Years Later is David Ray Griffin's tenth book about the tragic events of September 11, 2001. Asking in the first chapter whether 9/11 justified the war in Afghanistan, he explains why it did not. In the following three chapters, devoted to the destruction of the World Trade Center, Griffin asks why otherwise rational journalists have endorsed miracles (understood as events that contradict laws of science). Also, introducing the book's theme, Griffin points out that 9/11 has been categorized by some social scientists as a state crime against democracy. Turning next to debates within the 9/11 Truth Movement, Griffin reinforces his claim that the reported phone calls from the airliners were faked, and argues that the intensely debated issue about the Pentagon—whether it was struck by a Boeing 757—is quite unimportant. Finally, Griffin suggests that the basic faith of Americans is not Christianity but "nationalist faith"—which most fundamentally prevents Americans from examining evidence that 9/11 was orchestrated by U.S. leaders—and argues that the success thus far of the 9/11 state crime against democracy need not be permanent.

Sefi Atta is one of the latest in a great line of female Nigerian writers. her works have garnered several literary awards; these include the Red Hen Press Short Story Award, the PEN International David TK Wong Prize, the Wole Soyinka Prize for Literature in Africa, and the Noma Award for Publishing in Africa. Atta's oeuvre has received the praise and respect of several noted African writers such as Buchi Emecheta, Chimamanda Ngozi Adichie and Helon Habila. Atta's insights into the roles and treatment of women, neocolonial government structures, patriarchy, 21st-century phenomena such as Nigerian e-mail phishing and the role of geography and place in characters' lives make her works some of the most indelible offerings across contemporary African fiction. Nevertheless, there exists a relative dearth of critical analyses of her works. That Atta writes across the genres perhaps explains some of the lack of literary criticism of her works. This study will facilitate continued examination of Atta's writings and further dissemination of critique. In this premiere edited volume on the works of Sefi Atta, Collins has assembled contributors from around the globe who offer critical analysis on each of Atta's published novels and several of her short stories. The volume is divided into four sections with chapters grouped by thematic connections-Sisterhood, Womanhood and Rites of Passage, The City, Dark Aspects of Atta's Works and Atta's Literature in Application. The book examines Atta's treatment of these themes while referencing the proficiency of her writing and style. The collection includes an

interview with Atta where she offers an insightful and progressive perspective on current language use by Africans. This book is the first aggregate of literary critique on selected works of Sefi Atta. This book is an important volume of literary criticism for all literature, world literature and African literature collections. It is part of the Cambria African Studies Series headed by Toyin Falola (University of Texas at Austin) with Moses Ochonu (Vanderbilt University).

In 1943, ritual murder was committed in a large African kingdom in the south of Ghana, then a colony of Great Britain. Palace officials and close kin of a recently deceased king had reputedly killed one of his chiefs in order to smooth the king's passage into the afterlife. This riveting study tells the story of the murder, the trials and appeals of those accused of the crime, and the effect of the case on politics in Ghana and Great Britain. In recounting this fascinating case, the book also provides important insights into law and politics in the colonial Gold Coast, the clash between traditional and modern values, and the nature of African monarchy in the colonial period. Drawing on newly available oral and written evidence from Ghana and Britain, Richard Rathbone builds a detailed picture of the leading characters in the case, as well as of the thirty-year rule of Nana Ofori Atta, the king. He shows how the death of the king destroyed the economic, social, and moral fabric of the kingdom, and how this destruction was further exacerbated by legal proceedings resulting from the murder. The case set the indigenous royal family against the colonial government, challenging the authority of each. Close kinsmen of the accused, hitherto in the vanguard of moderate nationalism, were radicalized by their extended confrontation with the colonial justice system. It was their political initiatives that accelerated the formation of the Gold Coast's first national political party in the late 1940s, and which led in turn to the struggle for self-government and to the achievement of Ghanaian independence in 1957.
