 This book series gives a comprehensive overview of the adverse effects of botanical medicines. It provides introductory information on Botany, Chemistry, Pharmacology and Uses, followed by an Adverse Reaction Profile subdivided according to

organ and function. The third contribution to the series gives important information about eighteen specific medicinal herbs and important plant constituents. The herbs and constituents have been selected for several reasons, such as a prominent place in phytotherapy, clinical expectations about therapeutic potential and recent concern about a serious adverse reaction. The World Health Organization Regional Office for Europe (Copenhagen) has supported the book in the form of an acknowledgement that has been prepared by this Office.

 The Getty Museum building recreates an ancient Roman villa on the shores of the Pacific Ocean, where guests can feel that they are visiting the Villa dei Papiri before it was buried by the eruption of Mount Vesuvius in AD 79. The climate of southern California has made it possible to plant the gardens with dozens

of herbs, flowers, and fruit trees known to the Greeks and Romans. In classical times they were practical as well as beautiful, providing color, perfume, home medicines, and flavorings for food and drink. Martha Breen Bredemeyer, a San Francisco Bay area artist, was inspired to paint two dozen of the garden's herbs. Her watercolor gouaches combine vibrant color with the fragile delicacy of these short-lived plants while her pen-and-ink drawings share their wiry grace. Jeanne D'Andrea discusses twenty-one of the herbs in detail after presenting their place in myth, medicine, and home in the introduction.

The British Pharmacopoeia has provided official standards for the quality of substances, medicinal products and articles used in medicine since its first publication in 1864. It is used in over 100 countries and remains an essential global reference in pharmaceutical research and development and quality control. This book explores how these standards have been achieved through a comprehensive review of the history and development of the pharmacopoeias in the UK, from the early London, Edinburgh and Dublin national pharmacopoeias to the creation of the British Pharmacopoeia and its evolution over 150 years. Trade in medicinal substances and products has always been global, and the British Pharmacopoeia is placed in its global context as an instrument of the British Empire as it first sought to cover the needs of countries such as India and latterly as part of its role in international harmonisation of standards in Europe and elsewhere. The changing contents of the pharmacopoeias over this period reflect the changes in medical practice and the development of dosage forms from products dispensed by pharmacists to commercially manufactured products, from tinctures to the latest monoclonal antibody products. The book will be of equal value to historians of medicine and pharmacy as to practitioners of medicine, pharmacy and pharmaceutical analytical chemistry.

Recommended procedures - whether involving visual inspection or the use of thin-layer chromatography for the qualitative

determination of impurities - should also prove useful to the pharmaceutical industry and pharmacists working with these materials.

Healthcare professionals, including doctors, pharmacists and nurses, are often confronted with patients who use over-the-counter (OTC) herbal medicinal products and food supplements. While taking responsibility for one's own health and treatment options is encouraged, many patients use these products based on limited (and sometimes inaccurate) information from non-scientific sources, such as the popular press and internet. There is a clear need to offer balanced, well-informed advice to patients, yet a number of studies have shown that, generally, conventionally trained health practitioners consider their knowledge about herbal medicinal products and supplements to be weak. Phytopharmacy fills this knowledge gap, and is intended for use by the busy pharmacist, nurse, or doctor, as well as the 'expert patient' and students of pharmacy and herbal medicine. It presents clear, practical and concise monographs on over a hundred popular herbal medicines and plant-based food supplements. Information provided in each monograph includes: • Indications • Summary and appraisal of clinical and pre-clinical evidence • Potential interactions • Contraindications • Possible adverse effects An overview of the current regulatory framework is also outlined, notably the EU Traditional Herbal Medicinal Products Directive. This stipulates that only licensed products or registered traditional herbal medicinal products (THRs), which have assured quality and safety, can now legally be sold OTC. Monographs are included of most of the major herbal ingredients found in THRs, and also some plant-based food supplements, which while not strictly medicines, may also have the potential to exert a physiological effect.
