A classic and influential work that laid the theoretical foundations for information theory and a timely text for contemporary informations theorists and practitioners. With the influential book *Cybernetics*, first published in 1948, Norbert Wiener laid the theoretical foundations for the multidisciplinary field of cybernetics, the study of controlling the flow of information in systems with feedback loops, be they biological, mechanical, cognitive, or social. At the core of Wiener's theory is the message (information), sent and responded to (feedback); the functionality of a machine, organism, or society depends on the quality of messages. Information corrupted by noise prevents homeostasis, or equilibrium. And yet *Cybernetics* is as philosophical as it is technical, with the first chapter devoted to Newtonian and Bergsonian time and the philosophical mixed with the technical throughout. This book brings the 1961 second edition back into print, with new forewords by Doug Hill and Sanjoy Mitter. Contemporary readers of *Cybernetics* will marvel at Wiener's prescience—his warnings against “noise,” his disdain for “hucksters” and “gadget worshipers,” and his view of the mass media as the single greatest anti-homeostatic force in society. This edition of *Cybernetics* gives a new generation access to a classic text.

 This volume is a logical sequel of Volume I, *The Search for System*: indeed, it concerns the ways theoretical systems are put to work and subjected to

test. Yet it can be read independently by anyone familiar with some factual theories, referring back to Volume I when necessary. Special Symbols

"[An] important essay by a philosopher who more convincingly than any other I can think of demonstrates the continuing significance of his vocation in the life of our culture."—Karsten Harries, *The New York Times Book Review* With *The Presence of Myth*, Kolakowski demonstrates that no matter how hard man strives for purely rational thought, there has always been-and always will be-a reservoir of mythical images that lend "being" and "consciousness" a specifically human meaning. "Kolakowski undertakes a philosophy of culture which extends to all realms of human intercourse—intellectual, artistic, scientific, and emotional. . . . [His] book has real significance for today, and may well become a classic in the philosophy of culture."—Anglican Theological Review

Karl Barth was the master theologian of our age. Whenever men in the past generation have reflected deeply on the ultimate problems of life and faith, they have done so in a way that bears the mark of the intellectual revolution let loose by this Swiss thinker. But his life was not simply one of quiet reflection and scholarship. He was obliged to do his thinking and writing in one of the stormiest periods of history, and he always attempted to speak to the problems and concerns of the time. In June 1933 he emerged as the theologian of the Confessional movement, which was attempting to preserve the integrity of the Evangelical Church in Germany against corruption from within and terror from without. His leadership in this struggle against Nazism also made it necessary for him to say something about the totalitarianism that the Soviet power was clamping down upon a large part of Europe. In this indirect way, a Barthian social philosophy emerged, and this theologian, who abjured apologetics and desired nothing but to expound the Word of God, was compelled by circumstances to propound views on society and the state that make him one of the most influential social thinkers of our time. David Haddorff is Associate Professor of Theology and Religious Studies at St. John's University, New York. He is the author of several articles and reviews, and the book: *Dependence and Freedom: The Moral Thought of Horace Bushnell* (1994). Even though scholars have known of Neo-Babylonian legal texts almost since Assyriology's very beginnings, no comprehensive study of court procedure has been undertaken. This lack is particularly glaring in light of studies of court procedure in earlier periods of Mesopotamian history. With these studies as a model, this book begins by presenting a comprehensive classification of the text-types that made up the "tablet trail" of records of the adjudication of legal disputes in the Neo-Babylonian period. In presenting this text-typology, it considers the texts' legal function within the adjudicatory process. Based on this, the book describes the adjudicatory process as it is attested in private records as well as in records from the Eanna at Uruk.

The acid test of corporate social responsibility (CSR) is simply this: does it lead to positive impacts on society and the environment or is it just rhetoric? And if it does lead to positive impacts, how can these be enhanced? This timely book tackles this cutting-edge challenge by presenting empirical findings from a range of surveys and in-depth case studies. These build on a new methodological and theoretical framework for assessing and explaining the sustainability impact of CSR. For selected sustainability issues mitigation of climate change and chemical risk, resource management in marine fisheries, promotion of gender equality and countering of bribery and within different European industries, the authors show that the rhetoric of CSR is still stronger than its reality. They do so by investigating into CSR practices which encompass the creation of a vision on CSR, its strategic and operative implementation and its organisational and cultural embedding within companies and their supply chains. The authors conclude that the reality of CSR is strong enough to allow for some rhetoric. They name intra- and extra-company success factors for, and limits of, producing sustainability impacts through CSR. Finally, they discuss its contribution to achieving public policy goals and the governance paradigms that are necessary to make CSR effective. The volume successfully combines a business and public policy perspective, based on an interdisciplinary approach. This book will be invaluable for both students and researchers interested in the effects of CSR, and will prove a useful tool for policy-makers and CSR practitioners alike.

How should we assess and present information about the quality of research-doctorate programs? In recommending that the 1995 NRC rankings in *Assessing the Quality of Research-Doctorate Programs: Continuity and Change* be updated as soon as possible, this study presents an improved approach to doctoral program assessment which will be useful to administrators, faculty, and others with an interest in improving the education of Ph.D.s in the United States. It reviews the methodology of the 1995 NRC rankings and recommends changes, including the collection of new data about Ph.D. students, additional data about faculty, and new techniques to present data on the qualitative assessment of doctoral program reputation. It also recommends revision of the taxonomy of fields from that used in the 1995 rankings.

Doctoral programs at U.S. universities play a critical role in the development of human resources both in the United States and abroad. This volume reports the results of an extensive study of U.S. research-doctorate programs in five broad fields: physical sciences and mathematics, engineering, social and behavioral sciences, biological sciences, and the humanities. *Research-Doctorate Programs in the United States* documents changes that have taken place in the size, structure, and quality of doctoral education since the widely used 1982 editions. This update provides selected information on nearly 4,000 doctoral programs in 41 subdisciplines at 274 doctorate-granting institutions. This volume also reports the results of the National Survey of Graduate Faculty, which polled a sample of faculty for their views on the scholarly quality of program faculty and the effectiveness of doctoral programs in preparing research scholars/scientists. This much-anticipated update of such an essential reference will be useful to education administrators, university faculty, and students seeking authoritative information on doctoral programs.
