Conceptualizing the World BRILL

This work explores the role of canon law in the ecclesiastical reform movement of the eleventh century, commonly known as the Gregorian Reform. Focusing on the *Collectio canonum* of Bishop Anselm of Lucca, it explores how the reformers came to value and employ law as a means of achieving desired ends in a time of social upheaval and revolution.

Papacy and Law in the Gregorian Revolution Springer Nature

The worst economic crisis since the Great Depression has generated a fundamental re-evaluation of the free-market policies that have dominated American politics for three decades. *State of Innovation* brings together critical essays looking at the 'innovation industry' in the context of the current crisis. The book shows how government programs and policies have underpinned technological innovation in the US economy over the last four decades, despite the strength of 'free market' political rhetoric. The contributors provide new insights into where innovations come from and how governments can support a dynamic innovation economy as the US recovers from a profound economic crisis. *State of Innovation* outlines a 21st century policy paradigm that will foster cutting-edge innovation which remains accountable to the public.

What is—and what was—"the world"? Though often treated as interchangeable with the ongoing and inexorable progress of

globalization, concepts of "world," "globe," or "earth" instead suggest something limited and absolute. This innovative and interdisciplinary volume concerns itself with this central paradox: that the complex, heterogeneous, and purportedly transhistorical dynamics of globalization have given rise to the idea and reality of a finite—and thus vulnerable—world. Through studies of illuminating historical moments that range from antiquity to the era of Google Earth, each contribution helps to trace the emergence of the world in multitudinous representations, practices, and human experiences.

"The author focuses on Adam Smith and his contemporaries, who pondered these issues, particularly the nature and development of commercial society. They attempted to come to terms with the claim that, on the one hand, the market was a decisive element in economic progress, and, on the other, that its workings depended upon the release of the immoral desires of fallen men and that its consequences were socially and politically destabilizing. Hont reconstructs the salient features of this controversy between the proponents of market sociability and its most trenchant critics. In doing so, he has helped to locate historically the most important arguments at the heart of the emergence of modernity."--Jacket.

This book is a collection of papers presented at the conference "Forum Math-for-Industry 2014" for which the unifying theme was "Applications + Practical Conceptualization + Mathematics = fruitful Innovation" in October 2014. This epigram encapsulates the dynamics of the process that takes an application through to an innovation. Industrial mathematics can be viewed as the causal engine that implements the epigram by taking an Application such as input and convolving it with a mixture of Practical Conceptualization and Mathematics to generate a fruitful Innovation as output. The book illustrates various aspects of the

two-way interaction between applications and their association highlighting how practical conceptualization assists with the linking of the question that encapsulates the current application to the relevant mathematics. The contents of this volume address productive and successful interaction between industry and mathematicians, as well as the cross-fertilization and collaboration that result when mathematics is involved with the advancement of science and technology.

This book engages the reader in exploring the relationships between digital social innovation initiatives and the city. It delivers a fresh, accessible and case-based discussion on the emergence of digitally-enabled social innovation practices in Europe that are redesigning the urban space and challenging the consolidated urban governance processes. By adopting a critical geography perspective, this ground-breaking analysis of digital social innovation provides the reader with an accessible overview of the way in which urban reproductive processes mobilise the physical and the virtual dimensions of the city and generate distinctive spatial configurations. Together with novel urban narratives and socio-technical imaginaries, these support the existing geometries of power or construct new ones. The author clearly describes contemporary cities as the new battlegrounds for controlling the digital sphere, shaped by the interplay between digital capitalism and resistance movements. In light of grassroots initiatives advanced by cyber-activists, e-makers and hackers, the book unveils the socio-political and cultural underpinnings of the revolution produced by the digital social innovations in the city

and the socio-technological regimes supporting them. This author successfully sheds new critical light on traditional innovation studies exploring the debate on digital innovation through the lens of social and cultural geography providing an invaluable reference for those working in this field.

"When and how did public health become modern? In *Governing Systems*, Tom Crook re-examines this key question in the context of Victorian and Edwardian England, long regarded as one of the 'homes' of modern public health. The modernity of modern public health, Crook argues, should be located not in the rise of a centralized, bureaucratic and disciplinary State, but in the contested formation and intricate functioning of systems of governing, from the administrative to the technological. Equally, we need to embrace a dialectical understanding of modern governance, one that is rooted in the interaction of multiple levels, agents and times. Theoretically ambitious, but empirically grounded, *Governing Systems* will be of interest to historians of modern public health and modern Britain, as well as anyone interested in the complex gestation of the governmental dimensions of modernity"--Provided by publisher.

This new edition reintroduces on the central texts of late nineteenth-century political thought. In addition to the fourth and final edition of the *Philosophical Theory of the State*, the editors have added a comprehensive selection of Bosanquet's most important essays on political theory and social policy. Also added is a detailed new introduction, a guide to further reading, and an index. Together they make clear the social and political background and implications of Bosanquet's political philosophy and allow a more complete understanding of British idealism.

Theories of Social Innovation World Scientific

In this original and thoughtful book, Govindan Parayil draws together current scholarship from disciplines ranging from history to economics to sociology as he develops a cohesive theory of technological change. Drawing on a detailed case study of the Green Revolution in Indian agriculture, Parayil convincingly argues that technological change is contingent upon the social-historical process of knowledge change.

Conceptualizing Technological Change Springer Nature

This book develops new theoretical perspectives on the economics and politics of innovation and knowledge in order to capture new trends in modern capitalism. It shows how giant corporations establish themselves as intellectual monopolies and how each of them builds and controls its own corporate innovation system. It presents an analysis of a new form of production where Google, Amazon, Facebook, Apple and Microsoft, and their counterparts in China, extract value and appropriate intellectual rents through privileged access to AI algorithms trained by data from organizations and individuals all around the world. These companies' specific form of production and rent-seeking takes place at the global level and challenges national governments trying to regulate intellectual monopolies and attempting to build stronger national innovation systems. It is within this context that the authors provide new insights on the complex interplay between corporate and national innovation systems by looking at the US-China conflict, understood as a struggle for global technological supremacy. The book ends with alternative scenarios of global governance and advances policy recommendations as well as calls for social activism. This book will be of interest to students, academics and practitioners (both

from national states and international organizations) and professionals working on innovation, digital capitalism and related topics.
