'Mission is not the ultimate goal of the church. Worship is. Missions exist because worship doesn't. Worship is ultimate.' John Piper's contemporary classic draws on key biblical texts to demonstrate that worship is the ultimate goal of the church and that proper worship fuels missionary outreach. Piper offers a biblical defence of God's supremacy in all things, providing a sound theological foundation for

missions. He examines whether Jesus is the only way to salvation and issues a passionate plea for God-centredness in the missionary enterprise, seeking to define the scope of the task and the means for reaching 'all nations'. Let the Nations Be Glad! is a trusted resource for missionaries, pastors, church leaders, youth workers, seminary students, and all who want to connect their labours to God's global purposes. This third edition has been revised and expanded throughout and includes new material on the 'prosperity gospel'. *The Emerald Planet* UNM Press

Plants have profoundly
moulded the Earth's
climate and the
evolutionary trajectory of
life. Far from being 'silent
witnesses to the passage
of time', plants are
dynamic components of
our world, shaping the
environment throughout
history as much as that
environment has shaped
them. In *The Emerald
Planet*, David Beerling
puts plants centre stage,

revealing the crucial role
they have played in
driving global changes in
the environment, in
recording hidden facets of
Earth's history, and in
helping us to predict its
future. His account draws
together evidence from
fossil plants, from
experiments with their
living counterparts, and
from computer models of
the 'Earth System', to
illuminate the history of
our planet and its
biodiversity. This new
approach reveals how
plummeting carbon
dioxide levels removed a
barrier to the evolution of
the leaf; how plants
played a starring role in
pushing oxygen levels
upwards, allowing
spectacular giant insects
to thrive in the
Carboniferous; and it
strengthens fascinating
and contentious fossil
evidence for an ancient
hole in the ozone layer.
Along the way, Beerling
introduces a lively cast of
pioneering scientists from
Victorian times onwards
whose discoveries
provided the crucial
background to these and
the other puzzles. This
understanding of our
planet's past sheds a
sobering light on our own
climate-changing
activities, and offers clues
to what our climatic and

ecological futures might look like. There could be no more important time to take a close look at plants, and to understand the history of the world through the stories they tell.
