Binocular Vision and Stereopsis Springer

The Fix is the most explosive story of sports corruption in a generation.

Intriguing, riveting, and compelling, it tells the story of an investigative

journalist who sets out to examine the world of match-fixing in professional

soccer. From the Introduction

Understand how gambling fixers work to corrupt a soccer game and you will

understand how they move into a

basketball league, a cricket tournament, or a tennis match (all places, by the way,

that criminal fixers have moved into). My views on soccer have changed. I still

love the Saturday-morning game

between amateurs: the camaraderie and the fresh smell of grass. But the

professional game leaves me cold. I

hope you will understand why after

reading the book. I think you may never look at sport in the same way again.

From the Hardcover edition.

This book includes the thoroughly refereed post-conference proceedings of

the 14th RoboCup International

Symposium, held in Singapore, in June,

2010 - representing the scientific tracks

structured in four sessions entitled

simulation and rescue robots; robot

perception and localization; robot motion

and humanoid robots; and human robot

interaction and semantic scene analysis.

The 20 revised full papers and 16

revised short papers presented were carefully reviewed and selected from 78 submissions. Documenting the research advances of the RoboCup community since the predecessor symposium, this book constitutes a valuable source of reference and inspiration for R&D professionals interested in RoboCup or in robotics and distributed AI more generally.

Confidently face the challenges of proteomics research specific to plant science with the information in *Plant Proteomics*, which will introduce you to the techniques and methodologies required for the study of representative plant species. Read about proteomics studies in Arabidopsis, rice, and legumes and find information about common technologies like mass spectrometry and gel electrophoresis. Discover expression proteomics, functional proteomics, structural proteomics, bioinformatics, and systems biology, understand how to conduct proteomics studies in developing countries and underfunded laboratories, and gain access to guidelines for sample preparation.

Whether it be one pound on the National Lottery or a million pounds on the turn of a card, the instinct to bet is the same.

Over the centuries there have been many strange gamblers - and even more strange gambles - and in this unique collection of punts and punters, Graham Sharpe reveals fearless, flamboyant and

fantastic flutters. Some of the most extraordinary bets include the male gambler who had a boob job to win a big bet; the gambler who set off to walk round the world wearing an iron mask to land a wager; the man who could genuinely dream winners. Sharpe is also haunted by a couple of ghostly gambles, and looks at the betting propensities of US Presidents - including one who gambled away the White House's finest china. Celebrities who indulge in strange betting practices are unmasked, too - the Marx Brothers, Ben Affleck, James Bond, Kerry Packer, Richard Burton, Oscar Wilde, Professor Stephen Hawking, to name a few. This painstakingly researched, original and unusual offering is an overdue addition to the ever-popular 'Strangest' series - and you can bet on that!

 Since the first athletic events found a fan base, sports and statistics have always maintained a tight and at times mythical relationship. As a way to relay the telling of a game's drama and attest to the prodigious powers of the heroes involved, those reporting on the games tallied up the numbers that they believe best described the action and best defined the winning edge. However, they may not have always counted the right numbers. Many of our hallowed beliefs about sports statistics have long been fraught with misnomers. Whether it concerns Scottish football or American baseball, the most revered statistics often have little to do with any winning edge. Covering an international collection of sports, *Statistical Thinking in Sports* provides an accessible survey of current research in statistics and sports, written by experts from a variety of arenas. Rather than rely on casual

observation, they apply the rigorous tools of statistics to re-examine many of those concepts that have gone from belief to fact, based mostly on the repetition of their claims. Leaving assumption behind, these researchers take on a host of tough questions- Is a tennis player only as good as his or her first serve? Is there such a thing as home field advantage? Do concerns over a decline in soccer's competitive balance have any merit? What of momentum-is its staying power any greater than yesterday's win? And what of pressure performers? Are there such creatures or ultimately, does every performer fall back to his or her established normative? Investigating a wide range of international team and individual sports, the book considers the ability to make predictions, define trends, and measure any number of influences. It is full of interesting and useful examples for those teaching introductory statistics. Although the articles are aimed at general readers, the serious researcher in sports statistics will also find the articles of value and highly useful as starting points for further research.

Match Fixer takes place inside the murky underbelly of Asian Football. The so-called squeaky clean city-state of Singapore plays host to betting syndicates which have for decades fed off the insatiable illegal gambling habits of the local population and in the process made a select few bookies very rich and far too powerful. Neil Humphreys, a former Football correspondent for the national Singapore press, lifts the lid off a previously unexplored - but very real - subject. In his debut novel, corruption is destroying the Beautiful Game in Asia

and has spread its tentacles into the UK via spread betting cartels that have already knocked out floodlights and caused chaos in the English Premier League. Against such a background, former West Ham United apprentice striker Chris Osborne arrives in Singapore for a final roll of the dice to get his once promising career back on track. However not even a boyhood spent growing up in the East End prepares him for the crooked shenanigans, bloated former British footballing jetsam and the underground party drugs scene that welcomes him to life in paradise.

Every spring, the first four days of the NCAA men's basketball tournament attracts a horde of basketball bettors to Las Vegas. From the tip-off of the tournament's first game on Thursday morning to the final whistle on Sunday, throngs of bettors overwhelmingly male sit in smoky casinos obsessively watching as many as forty-eight college basketball games. This book immerses readers in that action. In *The Madness of March: Bonding and Betting with the Boys in Las Vegas*, Alan Jay Zaremba travels to The Strip and gives us a front-row view of the betting culture that surrounds the frenzied first weekend of the tournament. Alternating between humorous accounts of gamblers exploits and cultural theories on sports in society, Zaremba provides an engaging analysis of the sporting ritual that such gambling has become. With forays into the history of the tournament, the background of sports betting, and a little betting of his own, Zaremba raises the question of whether this subculture of March Madness is a blessing or a curse

and what, finally, it all means.

This book constitutes the proceedings of the 9th International Conference on the Foundations of Augmented Cognition, AC 2015, held as part of the 17th International Conference on Human-Computer Interaction, HCII 2015, which took place in Los Angeles, CA, USA, in August 2015. HCII 2015 received a total of 4843 submissions, of which 1462 papers and 246 posters were accepted for publication after a careful reviewing process. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The 78 papers presented in the AC 2015 proceedings address the following major topics: cognitive performance and work

load, BCI and operational neuroscience, cognition, perception and emotion measurement, adaptive and tutoring training, applications of augmented cognition.

This volume offers state-of-the-art research in service science and its related research, education and practice areas. It showcases recent developments in smart service systems, operations management and analytics and their impact in complex service systems. The papers included in this volume highlight emerging technology and applications in fields including healthcare, energy, finance, information technology, transportation, sports, logistics, and public services. Regardless of size and service, a service organization is a service system.

Because of the socio-technical nature of a service system, a systems approach must be adopted to design, develop, and deliver services, aimed at meeting end users' both utilitarian and socio-psychological needs. Effective understanding of service and service systems often requires combining multiple methods to consider how interactions of people, technology, organizations, and information create value under various conditions. The papers in this volume present methods to approach such technical challenges in service science and are based on top papers from the 2019 INFORMS International Conference on Service Science.

Learn how to bet on sports safely, smartly, and responsibly—and profit big—with this easy-to-use guide, perfect for beginners! Betting money on sports

can be great fun and is a sure way to turn any sports game into an exciting must-watch event. However, it can be dangerous to the uninitiated—new gamblers can risk too much, bet randomly, or even lose it all. The Everything Guide to Sports Betting won't let that happen. Filled with tips, tricks, and tactics, this handy guide shows you how to place bets strategically. You'll learn all of the different types of bets you can make, how to spot a potentially profitable bet, and when to walk away. Covering all of the major sports leagues, The Everything Guide to Sports Betting will introduce you to the sports betting world and show you how to beat the casinos at their own games. In no time, you'll be a gambling pro—and cash in on some major wins!

The capabilities and possibilities of emerging game-based learning technologies bring about a new perspective of learning and instruction. This, in turn, necessitates alternative ways to assess the kinds of learning that is taking place in the virtual worlds or informal settings. accordingly, aligning learning and assessment is the core for creating a favorable and effective learning environment. The edited volume will cover the current state of research, methodology, assessment, and technology of game-based learning. There will be contributions from international distinguished researchers which will present innovative work in the areas of educational psychology, educational diagnostics, educational technology, and learning sciences. The edited volume will be divided into four major parts.

Drawing on the work of internationally

acclaimed experts in the field, *Handbook of Item Response Theory, Volume 3: Applications* presents applications of item response theory to practical testing problems. While item response theory may be known primarily for its advances in theoretical modeling of responses to test items, equal progress has been made in its providing innovative solutions to daily testing problems. This third volume in a three-volume set highlights the major applications. Specifically, this volume covers applications to test item calibration, item analysis, model fit checking, test-score interpretation, optimal test design, adaptive testing, standard setting, and forensic analyses of response data. It describes advances in testing in areas such as large-scale educational assessment, psychological testing, health measurement, and measurement of change. In addition, it extensively reviews computer programs available to run any of the models and applications in Volume One and Three. Features Includes contributions from internationally acclaimed experts with a history of advancing applications of item response theory Provides extensive cross-referencing and common notation across all chapters in this three-volume set Underscores the importance of treating each application in a statistically rigorous way Reviews major computer programs for item response theory analyses and applications. Wim J. van der Linden is a distinguished scientist and director of research and innovation at Pacific Metrics Corporation. Dr. van der Linden is also a professor emeritus of measurement and data analysis at the University of Twente. His research interests include test theory, adaptive testing, optimal test assembly, parameter linking, test equating, and

response-time modeling as well as decision theory and its applications to problems of educational decision making.

This important text and reference for researchers and students in machine learning, game theory, statistics and information theory offers a comprehensive treatment of the problem of predicting individual sequences. Unlike standard statistical approaches to forecasting, prediction of individual sequences does not impose any probabilistic assumption on the data-generating mechanism. Yet, prediction algorithms can be constructed that work well for all possible sequences, in the sense that their performance is always nearly as good as the best forecasting strategy in a given reference class. The central theme is the model of prediction using expert advice, a general framework within which many related problems can be cast and discussed. Repeated game playing, adaptive data compression, sequential investment in the stock market, sequential pattern analysis, and several other problems are viewed as instances of the experts' framework and analyzed from a common nonstochastic standpoint that often reveals new and intriguing connections. [The Fix Is Still In](#) Simon and Schuster Biometrics is a rapidly evolving field with

applications ranging from accessing one's computer to gaining entry into a country. The deployment of large-scale biometric systems in both commercial and government applications has increased public awareness of this technology. Recent years have seen significant growth in biometric research resulting in the development of innovative sensors, new algorithms, enhanced test methodologies and novel applications. This book addresses this void by inviting some of the prominent researchers in Biometrics to contribute chapters describing the fundamentals as well as the latest innovations in their respective areas of expertise.

This edited volume explores the fundamental aspects of the dark web, ranging from the technologies that power it, the cryptocurrencies that drive its markets, the criminalities it facilitates to the methods that investigators can employ to master it as a strand of open source intelligence. The book provides readers with detailed theoretical, technical and practical knowledge including the application of legal frameworks. With this it offers crucial insights for practitioners as well as academics into the multidisciplinary nature of dark web investigations for the identification and interception of illegal content and activities addressing both theoretical and practical issues.
