Representing the state of the art in multimedia

applications and their promise for enhancing early literacy development, this volume broadens the field of reading research by looking beyond print-only experiences to young readers' encounters with multimedia stories on the Internet and DVD. Multimedia storybooks include, in addition to static pictures and written text, features such as oral text, animations, sounds, zooms, and scaffolds designed to help convey meaning. These features are changing how young

children read text, and also provide technology-based scaffolds for helping struggling readers. Multimedia and Literacy Development reports experimental research and practices with multimedia stories indicating that new dimensions of media contribute to young children's ability to understand stories and to read texts independently. This is the first synthesis of evidence-based research in this field. Four key themes are highlighted:

Understanding the multimedia environment for learning Designing multimedia applications for learning New approaches to storybook reading Multimedia applications in classroom instruction. Written in jargon-free language for an international audience of students in university courses on literacy and information technology, researchers, policymakers, program developers, and media specialists, this volume is essential reading for all professionals interested in

early literacy and early interventions.

Offers a broad view of leadership and shareholder value based on multiple business disciplines In Why the Bottom Line Isn't! authors Dave Ulrich and Norm Smallwood argue that sustainable shareholder value comes increasingly from assets not accounted for on an organization's balance

sheet. These assets include a company's reputation, its ability to attract talent, and its ability to react quickly to new opportunities in the marketplace. Why the Bottom Line Isn't! harnesses research from a number of disciplines including human resources, finance, and leadership to establish a hierarchy of such intangibles. The authors extrapolate from these intangibles to establish leadership tools that will help create sustainable

shareholder value. The book offers a broad, expansive perspective on leadership while eschewing convoluted theory for concrete practice. Dave Ulrich, Ph.D., (DOU@UMICH.EDU) has been listed by BusinessWeek as the top "guru" in management education. He has co-authored 10 books and over 100 articles, serves on the Board of Directors of Herman Miller, and has consulted with over half of the Fortune 200 companies. He is

currently on professional leave as Professor at the University of Michigan to serve as Mission President for the Church of Jesus Christ of Latter-day Saints in Montreal. Norm Smallwood (nsmallwood@rbl.net) is co-founder of Results-Based Leadership (www.rbl.net), which provides education and consulting services based on this book as well as the ideas in Results-Based Leadership: How Leaders Build the Business and Improve the Bottom Line, which he co-

authored with Ulrich. He has led leadership development, business strategy, organization capability, change management, and HR projects for a wide variety of clients spanning multiple industries.
