Recent stock market crises are exacerbated by investors who don't understand what has been happening to companies because investors lack an understanding of financial ratio analysis. Stock markets are efficient in that they incorporate, and even anticipate, information about companies based on financial accounting data provided by companies. However, market efficiency results from extensive analysis performed

by financial analysts. Much of this financial analysis is based on the analysis of financial information provided by companies and analyzed using financial ratio analysis. This book provides a step-by-step demonstration of how to download data from Internet sources, transfer the data to a spreadsheet, and conduct a financial ratio analysis of any company. The book outlines the steps needed to perform a financial ratio analysis, the financial statements to be retrieved from EDGAR, and the five categories of financial ratios used in the financial analysis of the company. The data retrieved from the financial statements is copied to a worksheet and used to compute and graph the financial ratios. The ratios and graphs are used to determine the performance drivers of this company.

Promoting confidence in one's financial accounting strategies and ability, this series of preliminary activities helps readers learn to prepare a comprehensive financial statement analysis. Each activity concentrates on only one aspect of the analysis, and uses data from well-known corporations, such as American Airlines, AT&T, Chrysler, Microsoft, Wal-Mart, and more. Focuses on interpretation and analysis, providing many numbers and keeping calculations to a minimum. Involves a researching component in a least one activity per chapter, i.e., reading the Wall Street Journal, surfing the world-wide-web, or calling a local bank. Uses four-years of comparative information when introducing financial statements,

helping readers develop an overall strategy to analyze the financial statement. Emphasizes the significant role ratios have in analyzing financial statements, and uses trend analysis to evaluate both the income statement and the balance sheet. A 'final project' requires readers to research, analyze, and prepare a comprehensive written report on the public corporation of their choice.
