This unique book closes the gap between psychology books and the research that made them possible. Its journey through the "headline history" of psychology presents 40 of the most famous studies in the history of the science, and subsequent follow-up studies that expanded their findings and relevance. Readers are granted a valuable insider's look at the studies that continue to be cited most frequently, stirred up the most controversy when they were published, sparked the most subsequent related research, opened new fields of psychological exploration, and changed most dramatically our knowledge of human behavior. For individuals with an interest in an introduction to psychology.

This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann. He traces LSD's path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. We follow Dr. Hofmann's trek across Mexico to discover sacred plants related to LSD, and listen in as he corresponds with other notable figures about his remarkable discovery. Underlying it all is Dr. Hofmann's powerful conclusion that mystical experience may be our planet's best hope for survival. Whether induced by LSD, meditation, or arising spontaneously, such experiences help us to comprehend the wonder, the mystery of the divine in the microcosm of the atom, in the macrocosm of the spiral nebula, in the seeds of plants, in the body and soul of people. Now, more than sixty years after the birth of Albert Hofmann's problem child, his vision of its true potential is more relevant, and more needed, than ever.

Human Molecular Genetics, Textbook and Problems Set Princeton Review

SOON TO BE A MAJOR MOTION PICTURE—The #1 New York Times bestselling worldwide sensation with more than 12 million copies sold, "a painfully beautiful first novel that is at once a murder mystery, a coming-of-age narrative and a celebration of nature" (The New York Times Book Review), now in paperback for the first time. For years, rumors of the "Marsh Girl" have haunted Barkley Cove, a quiet town on the North Carolina coast. So in late 1969, when handsome Chase Andrews is found dead, the locals immediately suspect Kya Clark, the so-called Marsh Girl. But Kya is not what they say. Sensitive and intelligent, she has survived for years alone in the marsh that she calls home, finding friends in the gulls and lessons in the sand. Then the time comes when she yearns to be touched and loved. When two young men from town become intrigued by her wild beauty, Kya opens herself to a new life—until the unthinkable happens. Where the Crawdads Sing is at once an exquisite ode to the natural world, a heartbreaking coming-of-age story, and a surprising tale of possible murder. Owens reminds us that we are forever shaped by the children we once were, and that we are all subject to the beautiful and violent secrets that nature keeps.

Our fascination with eating and drinking behaviors and their causes has resulted in a huge industry of food-related pop science. Every bookstore, every magazine stand, every grocery store checkout counter is filled with publications about how to get your child to eat vegetables, how to tell if someone has an eating disorder or, most commonly, how to lose weight. But the degree to which any of these is based on scientific research is very limited. In contrast to the literature for the general reader, the scientific research on eating and drinking behaviors is usually too technical for the general reader. *The Psychology of Eating and Drinking* is a unique volume; a textbook that can be comprehended by the general educated reader. Just as in her past editions of this book, Alexandra Logue grounds her investigation into the complex interactions between our physiology, our surroundings, and our eating and drinking habits in laboratory research and up-to-date scientific information. The chapters move from the general -- hunger and thirst, taste and smell, and eating behaviors -- to the more specialized -- overeating and overdrinking, anorexia and bulimia, and alcohol use. In each case, Logue provides a brief synopsis of the most historically influential scientific research and then relates this history to the most up to date advances. This method provides the reader with a general introduction to the physiology of sensations related to eating and drinking and how these sensations are influenced by the individual's social surroundings. *The Psychology of Eating and Drinking* provides the general reader and student with a biological and psychological framework to understand his or her eating behaviors.

A Path Forward Pearson

A woman and her husband rent a summer house, but what should be a restful getaway turns into a suffocating psychological battle. This chilling account of postpartum depression and a husband's controlling behavior in the guise of treatment will leave you breathless. 2018 Reprint of 1892 Edition. This short story is regarded as an important early work of American feminist literature, illustrating attitudes in the 19th century toward women's health, both physical and mental. Presented in the first person, the story is a collection of journal entries written by a woman whose physician husband (John) has rented an old mansion for the summer. Forgoing other rooms in the house, the couple moves into the upstairs nursery. As a form of treatment, the unnamed woman is forbidden from working, and is encouraged to eat well and get plenty of exercise and air, so she can recuperate from what he calls a "temporary nervous depression - a slight hysterical tendency", a diagnosis common to women in that period. Gilman used her writing to explore the role of women in America at the time. She explored issues such as the lack of a life outside the home and the oppressive forces of the patriarchal society. Through her work Gilman paved the way for writers such as Alice Walker and Sylvia Plath. Written with barely controlled fury after she was confined to her room for 'nerves' and forbidden to write, Gilman's pioneering feminist horror story scandalized nineteenth-century readers with its portrayal of a woman who loses her mind because she has literally nothing to do.
