 A kidney stone is a

buildup of solid material that clumps together within the urine and forms within the kidney. Kidney stones are usually hard because they are made up mainly of crystals. Almost all (98%) of the kidney stone weight is made up of crystals. But kidney stones also have soft mushy parts. What is a kidney stone and what happens if I get one? Kidney stones (Nephrolithiasis is the fancy word) are the PHYSICAL STONES that are present along the urinary tract (starting from the kidney and eventually making it's way down through the ureters, bladder, urethra, etc.). Renal Colic/Kidney Stones Revised and updated by experts in both nephrology and clinical nutrition, this seventh edition of Handbook of Nutrition and the Kidney provides practical and clinically relevant information for addressing the nutritional needs of patients with acute and chronic kidney disease. Concise yet in-depth, the book is packed with tables and charts in every chapter, and outlines detailed and daily nutritional requirements, including proteins, vitamins, minerals, lipids, other fatty acids, and
