The electric field at point P can be found by adding the electric field vectors due to each of the two lower point charges:

The electric field from a point charge is  $E = k_e \frac{q}{r^2}$ . As shown in the solution figure at right,  $E$  is to the right and upward at  $600 \text{ N/C}$  to the left and upward ...

Physics 42 HW Set 1 Serway Solutions Chapter 23 Questions Available within WebAssign. Most questions from this textbook are available in WebAssign. The online questions are identical to the textbook questions except for minor wording changes necessary for Web use.

WebAssign - College Physics 5th edition Equation 24.14 assumes that the incident light is in air. If the light is incident from a medium of index  $n_1$  onto a medium of index  $n_2$ , follow the procedure used to derive Equation 24.14 to show that  $\tan \theta_2 = n_1 \sin \theta_1$ .
