The Save a Life Initiative
has just released its
newest course: Basic Life
Support. This manual is
based on the 2015-2020
Basic Life Support
guidelines published by
the American Heart
Association. The Basic Life
Support (BLS) Provider
Handbook is a
comprehensive resource

intended for health care
professionals currently
enrolled in a Basic Life
Support Certification or
Recertification Course. It
serves as the primary
training material for BLS
Certification and
Recertification courses.
Although it is primarily
intended for professionals
to use during their
courses, the handbook
was also created to serve
as daily resource material
for health care
professionals. Information
covered in the handbook
includes Basic Life
Support instruction for
adults and children, AED
usage, airway obstruction
and rescue breathing
techniques, and more.
Specific Algorithms for
BLS and more are also
included within the
handbook. All material
included in this handbook
is delivered in a manner

From minor cuts and burns, to heart attacks and strokes, this handy, take-anywhere guide gives you the knowledge and advice you need to recognize and respond to any medical emergency. Be prepared for any medical emergency and handle it safely and efficiently with *The Complete First Aid Pocket Guide*. Quickly identify signs and symptoms of a wide range of medical conditions and learn how to recognize the difference between a minor injury or illness, and those that are more serious with this essential handbook. Each section of *The Complete First Aid Pocket Guide* includes a quick list of signs and

symptoms to look for and step-by-step first aid instructions for dealing with each situation, all in user-friendly, simple language that's easy to understand. Medical issues covered include:
—First aid basics, including roles and responsibilities of a first aider, managing an incident, activating emergency services, and infection control
—Lifesaving skills including the recovery position, cardiopulmonary resuscitation (CPR), and use of an automated external defibrillator (AED) —Minor injuries and conditions, including soft tissue injuries, splinters, blisters, eye injuries, nosebleed, diarrhea, and vomiting —Traumatic injuries including severe bleeding, amputation, shock, fractures, crush injuries, burns, and head and neck injuries
—Medical emergencies including heart attack, stroke, asthma, anaphylaxis, hypoglycemia, meningitis, seizures, poisoning, and emergency childbirth
—Environmental conditions including hypothermia, frostbite, heat stroke, sunburn, and lightning strike —Pediatric emergencies and illnesses, including

assessing an unresponsive child or baby, pediatric cardiopulmonary resuscitation (CPR), choking, croup, and febrile seizures —First aid kit lists for home, vehicles, and outdoor use With an appendix featuring an A-to-Z list of every condition covered, it's easy for you to quickly find the exact information you need in any situation you may face. With its small trim and portable size, *The Complete First Aid Pocket Guide* is the perfect addition to a home first aid kit, car first aid kit, disaster-survival bag, as well as a pocket companion for EMTs and other first responders in the field.

[A Practical Approach to Adult Medical Emergencies](#) Prentice Hall Basic Life Support (BLS) Provider Manual - The content in this handbook is in compliance with the 2020 guidelines for CPR and ECC (Emergency Cardiac Care), recently released by the American Heart Association - therefore, all the protocols illustrated in this book are based on up-to-date evidence. These guidelines are updated every 5 years. The BLS Provider Manual is a complete guide and

reference tool that covers all the information students need to know in order to successfully complete the BLS course. For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are found at the very end of the book. Basic Life Support (BLS) refers to a set of procedures that can be learned to prolong survival in life-threatening situations until more professional help is available. Any individual can become certified in basic life support protocols. These protocols are frequently updated, based on the latest evidence available, and every individual who undergoes BLS certification may need to refresh their knowledge every two years. Medical professionals usually have a sound understanding of basic life support protocols. Even then, it is essential for them to frequently undergo certifications to update their knowledge regarding the latest evidence-based protocols. This handbook is designed for both medical professionals and non-healthcare individuals. It aims to establish a sound

understanding of the mechanisms underlying basic life support. The intended audience is healthcare students and personnel who need to learn how to perform CPR and other basic cardiovascular life support skills in a wide variety of both clinical and prehospital settings. Basic Life Support (BLS) Amer Heart Assoc Introduction Early bystander cardiopulmonary resuscitation (CPR) improves outcomes after cardiac arrest. (1-3) CPR quality might be improved by feeding back to rescuers during resuscitation efforts. (4) Brayden Illuminating CPR Manikin employs LED lights to offer real-time compression rate and depth feedback to candidates during CPR delivery. This study aimed to understand users' 2019 opinions toward the Brayden model compared with the industry leader. Materials & Methods This qualitative study was conducted during basic life support courses at The University of Birmingham, between October 2017 and April 2018). Feedback was collected from candidates

and instructors exploring usability (e.g. ability to correct speed of compressions) and reliability (e.g. incidence of manikin malfunction). A 10 point Likert scale was also used to record candidate enjoyment and confidence in CPR performance. Results Overall 188 candidate and 6 instructor responses were collected. Candidates reported finding the Brayden model more realistic (40% vs. 20%) and easier to use (53% vs. 46%), when compared to the Laederal model respectively. Approximately half of candidates using the Brayden model reported it u2018easieru2019 to achieve correct rate (47%) and depth (51%). 28% of candidates reported initial confusion regarding the significance of the illumination feedback, however 58% reported good understanding by the end of the course. 66% of instructors reported illumination useful when teaching. Students said: u201cThe lights were very useful- reinforced compression depth & rateu201d, u201cVery good ideau201d, u201cFeel the new manikin is helpful for

those doing it the first time but is not as helpful for those who have done a similar course before. Conclusion Overall some candidates found the Brayden Illuminating CPR Manikin useful and enjoyable to use. Initial confusion regarding the significance of the illumination feedback could be reduced with specific briefing prior to use, providing context to the illumination, ensuring students fully understand its significance and derive the most benefit. BLS Reference Card American Heart Assn Incorporated This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There

have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

 The Save a Life Initiative has just released its newest course: Advanced Cardiac Life Support (ACLS). This manual is based on the 2015-2020 Advanced Cardiac Life Support guidelines published by the American Heart Association. The Advanced Cardiac Life Support (ACLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in an Advanced Cardiac Life Support Certification or Recertification Course. It serves as the primary training material for ACLS Certification and Recertification courses. Although it is primarily intended for use during their courses, the handbook was also created to serve as daily reference material for health care professionals. Information covered in the handbook includes ACLS instruction for adults and

children through multiple case scenarios. Case scenarios include, but are not limited to, respiratory arrest, ventricular fibrillation and bradycardia. Specific ACLS Algorithms and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.
