Bakker's classic of ecological science now includes three new chapters on Southern California which make the book more useful than ever. Striking new photographs illustrate the diversity of life, climate, and geological formation.

Driven by the electronics industry, electrochemical technology has rapidly evolved, finding increasing applications in microelectronics, batteries, sensors, materials science, industrial fabrication, corrosion, microbiology, neurobiology and medicine. Electrochemical Microsystem Technologies provides an overview of the technological status; the dev

The theory underlying AP Statistics and Business Statistics courses is given with most formula derivations and proofs. The difficulty level gradually increases from graphical and numerical examples to full proofs supporting the one-way and two-way ANOVA. The material is carefully selected to provide statistical prerequisites to Econometrics taught at the University of London. The exposition is illustrated with more than 40 tables and more than 30 figures. The book has several innovative features: a) methodical recommendations to students, b) Monte Carlo simulations in Excel, c) the Markovitz portfolio theory, d) a separate chapter on links to Econometrics, and e) usage of statistical functions in Excel and Mathematica instead of statistical tables.

Pacific Fisherman Cambridge University Press

The technology of mining is the subject of this fascinating book, and two companion volumes, all of which were originally published in 1907. Mining: Haulage details the railways that operate in the underground world of the mine. This historic book has been reprinted in its entirety. It's a treat for anyone who ever worked underground, or for anyone who ever wondered, ¿How does that work?¿

An Ecological Introduction to Its Natural Communities Univ of California Press

The revolution of Catalonia in 1640 was a signal event in seventeenth-century Europe. Its causes and antecedents - essential for an understanding of the revolution itself - form the basis of Professor Elliott's study of the Spanish monarchy at this time. They throw remarkable light on the whole question of the decline of Spain in the seventeenth century from its position of pre-eminence in Europe. From the fierce suppression of Catalan bandits by their Castilian overlords during the second decade of the century, Professor Elliott traces the gradual deterioration of relations between the principality of Catalonia and the government in Madrid. He shows how Olivares, the favourite and chief minister of Philip IV, attempted to use Catalan resources to fight Spain's foreign wars, and how the growing tension led ultimately to a revolution, which he suggests played a crucial part in Spain's decline. Professor Elliott's story is almost entirely based on previously unknown documents found in the Spanish national and local archives. These sources enabled him to write the first full-scale treatment of Olivares and his policies. While exciting as a story in its own right, it also stands

as a case-history of the perennial struggle between regional liberties and the claims of central governments.

The Journal of Fourier Analysis and Applications is a journal of the mathematical sciences devoted to Fourier analysis and its applications. The subject of Fourier analysis has had a major impact on the development of mathematics, on the understanding of many engineering and scientific phenomena, and on the solution of some of the most important problems in mathematics and the sciences. At the end of June 1993, a large Conference in Harmonic Analysis was held at the University of Paris-Sud at Orsay to celebrate the prominent role played by Jean-Pierre Kahane and his numerous achievements in this field. The large variety of topics discussed in this meeting, ranging from classical Harmonic Analysis to Probability Theory, reflects the intense mathematical curiosity and the broad mathematical interest of Jean-Pierre Kahane. Indeed, all of them are connected to his work. The mornings were devoted to plenary addresses while up to four parallel sessions took place in the afternoons. Altogether, there were about eighty speakers. This wide range of subjects appears in these proceedings which include thirty six articles.
