Management in the Age of Digital Business
Complexity focuses on how the digital age is changing management and vastly speeding up complexity dynamics. The recent coevolution of technologies has dramatically changed in just a few years how people and firms learn, communicate, and behave. Consequently, the process of how firms coevolve and the speed at which they coevolve has been dramatically changed in the digital age, and managerial methods are lagging way behind. Combining his own expertise with that of a number of specialist and international co-authors, McKelvey conveys how companies that fall behind digitally can quickly be driven out of business. The book has been created for academics seeking to upgrade management thinking into the modern digital age

and vastly improve the change capabilities of firms facing digital-oriented competition. Academic Press

This book is addressed at decision makers, project teams, project managers, company's IT-managers, and staff of consulting companies, who are either

involved in complex standard software implementation, or release migration projects. The book stresses the shortcomings of many present standard software implementations which mainly pertain to insufficiently optimised business processes, thus standard software has caused a lot of dissatisfied companies. The authors analyse certain popular implementation approaches (life-cycle-models) of different Standard Software suppliers. It shows how a new semi-process oriented way of implementing modern standard software systems may contribute to a better business performance.

This research aims to extend the body of knowledge used to explain the adoption of innovations by businesses. In doing so, a model is developed to explain the adoption of electronic banking by businesses using a methodology suggested by motivational theory. The use of the motivational model to explain adoption behaviour overcomes many of the key limitations of current

adoption research, and provides a framework where the main factors motivating a business to adopt electronic banking may be analysed and therefore determine the conditions favouring a business' decision to adopt the innovation. Key moderating influences from the innovativeness of the business manager and the service quality perception the business has of their bank complete the model that is tested in this research. The model was tested using data collected from a probabilistic sample of Australian businesses that provided empirical evidence to support the predictive capabilities of the model. Further empirical support for the existence of the moderating influence of the innovativeness of the business manager and the perceived service quality of their bank was found to influence the business' ultimate adoption intensity of electronic banking. The model was also found to be useful in constructing adopter classifications for electronic banking based on an adoption paradigm that suggested very different marketing strategies to be applied by banks to the

businesses in each of the adopter classifications. *The Digital Banking Revolution* IGI Global Market research guide to e-commerce and internet business a tool for strategic planning, competitive intelligence, employment searches or financial research.
