This extensive
undertaking,
Accelerator Mass
Spectrometry,
conducts an elaborate

and comprehensive
summary of one of the
foremost catalysts of
progress in scientific
research. Accelerator
mass spectrometry
(AMS), an innovative
analytical technique,
measures rare atoms
at unprecedented
levels of sensitivity,
revolutionizing the
science of radiocarbon

dating and accessing new natural radioisotopes as environmental tracers and chronometers. This book demonstrates how AMS is applied in the studies of extraterrestrial materials, the earth sciences, the future of the global environment, and the history of mankind. This compendium also highlights the significant impact of AMS on several fields of scientific investigation, spurring remarkable studies in global climate change, ancient artifacts, pollution, nuclear safeguards, geochronology, and materials characterization. The myriad of sample types and variety of applications in this examination include:

Meteorites from Mars
Ancient air trapped in Antarctic ice
The Shroud of Turin
The dating of human bones
The colonization of the Americas and Australia
Ancient rock art
The crown of Charlemagne
Cancerogenic effects of cooked meat
The consequences of the Chernobyl accident
The role of aluminum in Alzheimer's Disease
This unique edition has compiled the diverse set of scientific literature into a single volume, suitable as a text or resource on the major AMS-related outcomes, issues, and methods.

[Austrian Studies Newsletter](#)
Routledge
Author Franz J. Vesely offers students an introductory text on computational physics, providing them with the important basic

numerical/computational techniques. His unique text sets itself apart from others by focusing on specific problems of computational physics. The author also provides a selection of modern fields of research. Students will benefit from the appendixes which offer a short description of some properties of computing and machines and outline the technique of 'Fast Fourier Transformation.'

The Mathematics of Arbitrage Springer

These Proceedings include the written version of papers presented at the IAG International Symposium on "Gravity, Geoid and Earth Observation 2008". The Symposium was held in Chania,

Crete, Greece, 23-27 June 2008 and organized by the Laboratory of Geodesy and Geomatics Engineering, Technical University of Crete, Greece. The meeting was arranged by the International Association of Geodesy and in particular by the IAG Commission 2: Gravity Field. The symposium aimed at bringing together geodesists and geophysicists working in the general areas of gravity, geoid, geodynamics and Earth observation. Besides covering the traditional research areas, special attention was paid to the use of geodetic methods for: Earth observation, environmental monitoring, Global Geodetic Observing System (GGOS), Earth

Gravity Models (e.g., EGM08), geodynamics studies, dedicated gravity satellite missions (i.e., GOCE), airborne gravity surveys, Geodesy and geodynamics in polar regions, and the integration of geodetic and geophysical information.

Wissenschaftler, Lehrer und Musiker Springer Science & Business Media

Using this book can help the busy architect/engineer/contractor to optimize online time by determining the key sites to visit before connecting to the Internet. Topics are conveniently arranged by subject showing where to find the "index sites" together with details of many specialist sites.

Academic Studies Press

A History of Medieval Art in Midwestern Museums Humana

This book investigates the cultural connections between Africa and the Caribbean, using the lens of Mobility Studies to tease out the shared experiences between these highly diverse parts of the world.

Despite their heterogeneity in terms of cultures, languages, and political and economic histories, the connections between the African continent and the Caribbean are manifold, stretching back to the trans-Atlantic slave trade.

The authors in this book look to the past

as well as to the present, focusing on the manifold mobile connections between the regions' subjects, objects, ideas, texts, images, sounds, and beliefs. In doing so, the book demonstrates that mobility extends beyond just the movement of people, and that we can also see mobility in objects and ideas, travelling either in a material sense or in imaginary terms, in physical as well as in virtual spaces. Bringing the transdisciplinary fields of African Studies, Caribbean Studies, and Mobility Studies into dialogue, this book will be of interest to students and scholars across the humanities and social sciences.

Plant Proteomics
Rowman & Littlefield
This volume invites

young scientists and doctoral students in the fields of capital market theory, informational economics, and management science to visualize the many different ways to arrive at a thorough understanding of risk and capital. Rather than focusing on one subject only, the sample of papers collected may be viewed as a representative choice of various aspects. Some contributions have more the character of surveys on the state of the art while others stress original research. We found it proper to group the papers under two main themes. Part I covers information, risk aversion, and capital market theory. Part II is devoted to

management, policy, and empirical evidence. Two contributions, we think, deserved to break this allocation and to be placed in a prologue. The ideas expressed by Jost B. Walther, although meant as opening address, draw interesting parallels for risk and capital in genetics and evolution. An old, fundamental problem was asked and solved by Martin J. Beckmann: how does risk affect saving? The wise answer (Martin's 60th birthday is in July 1984) is both smart and simple, although the proof requires sophisticated dynamic programming. As always, such a work must be the result of a special occasion.

Flexible Working Practices and Approaches Springer

Science & Business Media

Leopold Nowak war viele Jahrzehnte in der musikwissenschaftlichen Forschung und Lehre in Österreich tätig und als langjähriger Leiter der Musiksammlung der österreichischen Nationalbibliothek für deren Auf- und Ausbau nach dem Zweiten Weltkrieg verantwortlich. Als Bruckner-Forscher genoss er internationales Ansehen und war darüber hinaus ein wesentlicher Akteur im Wiener Kulturleben des 20. Jahrhunderts. Der vorliegende Band stellt seine vielfältigen Tätigkeiten erstmals dar und enthält neben Erinnerungen der Autorin, seiner Tochter, umfangreiches, bisher unveröffentlichtes Material aus

Privatbesitz sowie wertvolle Dokumentationen für weiterführende Fragestellungen. *Strange Journey* Routledge This Sourcebook contains a comprehensive collection of sources on the topic of the social history of the Roman world during the late Republic and the first two centuries AD. Designed to form the basis for courses in Roman social history, this excellent resource covers original translations from sources such as inscriptions, papyri, and legal texts. Topics include: social inequality and class games, gladiators and attitudes to violence the role of slaves in Roman society economy and taxation

the Roman legal system the Roman family and gender roles. Including extensive explanatory notes, maps and bibliographies, this Sourcebook is the ideal resource for all students and teachers embarking on a course in Roman social history.

The Economist

Cambridge Scholars Publishing

A holistic and comprehensive account of the nature of the transition from hunting to farming in prehistory. It addresses for the first time the main bioarchaeological aspects such as changes in mobility, behaviour, diet and population dynamics. This book is of major interest to the relevant audience since it offers for the first time a

global perspective on the bioarchaeology of the transition to agriculture. It includes contributions from world-class researchers, with a particular emphasis on advances in methods (e.g. ancient DNA of pathogens, stable isotope analysis, etc.). The book specifically addresses the following aspects associated with the transition to agriculture in various world regions: Changes in adult and subadult stature and subadult growth profiles Diachronic trends in the analysis of functional morphological structures (craniofacial, vault, lower limbs, etc.) and whether these are associated with change in overall sex-specific morphological

variability Changes in mobility Changes in behaviour which can be reconstructed from the study of the skeletal record. These include changes in activity patterns, sexual dimorphism, evidence of inter-personal trauma, and the like. Population dynamics and microevolution by examining intra and inter population variations in dental and cranial metric traits, as well as archaeogenetic studies of ancient DNA (e.g. mtDNA markers). **Cultural Mobilities Between Africa and the Caribbean** Springer Science & Business Media This edition contains completely updated facts on more than 3600 funding sources, including more than 200 programmes

identified for the first time. Some of the programmes listed include, funding for research, travel, internships, fellowships, dissertation support, conferences, exhibitions and performances, primarily in the USA and Canada, as well as other countries. Among the disciplines covered are: literature, language, history, anthropology, philosophy, ethics, religion, painting, dance, photography, sculpture, music, drama, crafts, and folklore.

From Edessa to Urfa: The Fortification of the Citadel CRC Press

This book presents results of an archaeological research project focused on a specific

monumental area, the citadel, in the city of Urfa (Turkey), known in ancient times as Edessa. Three seasons of fieldwork were carried out (2014-2016) in order to identify the building sequence of the citadel and establish an absolute chronology of events.

Logotherapy and Existential Analysis

John Wiley & Sons
Modern workplaces are following a strong trend of increasing flexible working practices and approaches, offering more flexibility in working times, working places, work organization, and work relations as the result of new information and communication technologies. This book brings together a group of internationally

recognized experts in the field of flexible work to examine the psychological and social implications of these practices, describing the current state of research and empirically-based practices in this field. It focuses on organizational, job, and individual factors related to the quality of working life, and identifies potential risk groups where the benefits of flexible work are suppressed or not realized. Ideal for organizations implementing or considering implementing flexible work, for professionals and researchers in work and organizational psychology, and for HR professionals, this volume is an invaluable overview of rapidly

changing work norms and their impact on working life.

Proceedings of the Viktor Frankl Institute Vienna, Volume 1 Springer Science & Business Media

This collection of essays, which derive from a symposium held at the Art Institute of Chicago in 2005, tells the story of how medieval art was collected by both individuals and institutions in the American Midwest. This book will appeal to both medievalists and scholars of nineteenth- and twentieth century American history. In addition, it will also appeal to scholars who are interested in museum studies and the history of collecting. The essays in the first section,

“Collecting and Displaying Medieval Art,” consider the formation of medieval art collections at influential cultural institutions in three of the most important centers of industry and culture in the Midwest: Chicago, Detroit and Cleveland. The second section, “Medieval Art as Inspiration and Education,” examines the motives of both private donors and museum professionals in forming collections and establishing period rooms and cloistered spaces at museums in Toledo, Kansas City, and St. Louis, among others. At the opposite end of the spectrum was a new trend in curatorial practice, beginning in the 1930s, that favored the dismantling of period rooms and espoused

displaying historical works of art in more distinctly modern settings, a theme that pervades section three, “Medieval Art and Modernism.” An essay on medieval art in Midwestern university art museums and another one that considers the impact of works from medieval collections in special exhibitions serve as a remarkable coda to the rest of the volume. Two appendices follow this, one that provides an overview of medieval art collections in Midwestern university museums and another which provides a biographical sketch of prominent dealers of medieval art from 1900-1950.

European Studies Newsletter Walter de Gruyter GmbH & Co KG
This book highlights

the diverse methods needed to study a complex media environment, and the nuance and richness of the understanding gained by doing so, by offering examples of political communication research considering multiple platforms simultaneously. Political communication research that considers multiple media platforms is difficult and expensive to perform, and therefore relatively rare. Yet studying media platforms in isolation ignores the realities of the varied and complicated contemporary media experience, where most individuals consume information from multiple media outlets. Media

platforms, from traditional outlets such as newspapers and television to newer online platforms such as social media, have proliferated in recent years. This makes the media environment itself more complex, as classic understandings of how the media function give way to a growing recognition of the hybrid media system, where divisions between content and producers are opaque, and where information is gleaned from increasingly diverse and numerous sources. Studying political communication across platforms allows better understanding of which types of experiences and effects are universal, and which are specific to particular platforms.

This book was originally published as a special issue of Political Communication.

To Inspire and Instruct
Stanford University Press

"This book covers all aspects of endocytosis in both lower and higher plants, including basic types of endocytosis, endocytic compartments, and molecules involved in endocytic internalization and recycling in diverse plant cell types. It provides a comparison with endocytosis in animals and yeast and discusses future prospects in this new and rapidly evolving plant research field." -- book cover.

An Introduction
Academic Studies Press
The U.S. debut of

internationally acclaimed poet and performance artist Shailja Patel, Migritude is a tour-de-force hybrid text that confounds categories and conventions. Part poetic memoir, part political history, Migritude weaves together family history, reportage and monologues to create an achingly beautiful portrait of women's lives and migrant journeys undertaken under the boot print of Empire. Patel, who was born in Kenya and educated in England and the U.S., honed her poetic skills in performances of this work that have received standing ovations throughout Europe, Africa and North America. She has been described by the Gulf Times as "the

poetic equivalent of Arundhati Roy" and by CNN as "the face of globalization as a people-centered phenomenon of migration and exchange." *Migritude* includes interviews with the author, as well as performance notes and essays.

Plants & People

Springer Science & Business Media
This biographical history follows the iconoclastic career of John R. Friedeberg Seeley, pre-eminent "Pop Sociologist" and Mental Health Activist of the 1950s. Seeley's "strange journey" began as a British Home Child, estranged from his cosmopolitan German-Jewish family. Seeley progressed through the ranks of the Canadian Army Medical Corps, and the

University of Chicago, to achieve prominence as the author of *Crestwood Heights*, a defining work of postwar social science. He led an ambitious mental health project in Canadian schools, and was a founding father of York University. However, Seeley's struggle with mental illness and Jewish identity brought him into conflict with the Canadian establishment. His career ended in academic exile, but his dream of a mental health revolution still resonates.

Migritude Archaeopress Publishing Ltd

In the last decade, enormous progress has been made on the physiology of plant roots, including on a wide range of molecular aspects.

Much of that progress has been captured in the chapters of this book. Breakthroughs have been made possible through integration of molecular and whole-plant aspects. The classical boundaries between physiology, biochemistry and molecular biology have vanished. There has been a strong focus on a limited number of model species, including *Arabidopsis thaliana*. That focus has allowed greater insight into the significance of specific genes for plant development and functioning. However, many species are very different from *A. thaliana*, in that they are mycorrhizal, develop a symbiosis with N₂-fixing microsymbionts, or

have other specialised root structures. Also, some have a much greater capacity to resist extreme environments, such as soil acidity, salinity, flooding or heavy-metal toxicities, due to specific adaptations. Research on species other than *A. thaliana* is therefore pivotal, to develop new knowledge in plant sciences in a comprehensive manner. This fundamental new knowledge can be the basis for important applications in, e.g., agriculture and plant conservation. Although significant progress has been made, much remains to be learnt. It is envisaged that discoveries made in the recent past will likely lead to major breakthroughs in the

next decade.

Leopold Nowak

Springer Science & Business Media
Time-frequency analysis is a modern branch of harmonic analysis. It comprises all those parts of mathematics and its applications that use the structure of translations and modulations (or time-frequency shifts) for the analysis of functions and operators. Time-frequency analysis is a form of local Fourier analysis that treats time and frequency simultaneously and symmetrically. My goal is a systematic exposition of the foundations of time-frequency analysis, whence the title of the book. The topics range from the elementary theory of the short-

time Fourier transform and classical results about the Wigner distribution via the recent theory of Gabor frames to quantitative methods in time-frequency analysis and the theory of pseudodifferential operators. This book is motivated by applications in signal analysis and quantum mechanics, but it is not about these applications. The motivation is toward the detailed mathematical investigation of the rich and elegant structures underlying time-frequency analysis. Time-frequency analysis originates in the early development of quantum mechanics by H. Weyl, E. Wigner, and J. von Neumann around 1930, and in the

theoretical foundation of information theory and signal analysis by D.
