The MHS in the Department of Biochemistry and Molecular Biology includes courses within a core curriculum focused around biochemistry, molecular biology, reproductive biology, and the biology of disease and public health. The remainder of the courses are electives - that can be

chosen based on interests and career goals. Biochemistry and Molecular Biology, MHS < Johns Hopkins ... Biochemistry, sometimes called biological chemistry, is the study of chemical processes within and relating to living organisms. Biochemical processes give rise to the complexity of life. For instance, in every living cell, there is a crucial biological process,

called respiration. This process is the conversion of glucose into a useful form of energy, which is ATP. The study of biochemistry uncovers the numerous chemical processes involved in converting glucose into carbon dioxide and water. Biochemistry - Wikipedia Biochemistry and molecular biology investigates the relationships of chemical structure to the function of biological

compounds. To achieve these goals, biochemistry uses a specific approach that combines basic principles of chemistry, biology, physics, and mathematics to dissect complex biological processes. About - Department of Biochemistry and Molecular Biology ...
