An object is an hermetic capsule. It contains its own data and is responsible for their consistency. In this context, we abolish the global variables. The goal is to avoid the separation of data and procedures: the procedures are responsible of data consistency. Object Oriented Programming - Design Patterns A pattern is a small collection of objects or object classes that co-operate to achieve some desired goal. Each design pattern concentrates on some aspect of a problem and most systems may incorporate many different patterns.
