Western Conservation Journal Yukon Placer Mining Industry, 1978-1982

A comprehensive review of earthmoving and construction equipment from the birth of primitive industrial tools to today's awe-inspiring machines! The biggest haulers, dozers, scrapers and unusual specialty equipment in the field are presented here in over 500 black-and-white photographs. The author's expertly written text details machine categories and discusses the

history, evolution, design and manufacture of these industry giants. Packed full of top-quality archival photographs, most taken from manufacturer archives.

Giant Earthmovers : An Illustrated History

Workers, Managers, and Technological Change: Emerging Patterns of Labor Relations contributes significantly to an important subject. Technological change is one of the most powerful forces transforming the American industrial relations. In fact, the synergistic relationships between technology and industrial relations are so complex that they are not well or completely understood. We know that the impact of technology, while not independent of social forces, already has been profound: it has transformed occupations, creating new skills and

destroying others; altered the power relationships between workers and managers; and changed the way workers learn and work. Technology also has made it possible to decentralize some economic activities out of large metropolitan areas and into small towns, rural areas, and other countries. Most important, information technology makes it possible for international corporations to operate on a global basis. Indeed, some international corporations, especially those based in the United States, are losing their national identities, detaching the welfare of corporations from that of particular workers and communities. Internationalization, facilitated by information technology, has transformed industrial relations systems. A major objective of the traditional American industrial relations system was to take labor out of competition.
