 SOC test design and its optimization is the topic of Introduction to Advanced System-on-Chip Test Design and Optimization. It gives an introduction to testing, describes the problems related to SOC testing, discusses the modeling granularity and the implementation into EDA (electronic design automation) tools. The book is divided into three sections: i) test concepts, ii) SOC design for test, and iii) SOC test applications. The first part covers an introduction into test problems including faults, fault types, design-flow, design-for-test techniques such as scan-testing and Boundary Scan. The second part of the book discusses SOC related problems such as system modeling, test conflicts, power consumption, test access mechanism design, test scheduling and defect-oriented scheduling. Finally, the third part focuses on SOC applications, such as integrated test scheduling and TAM design, defect-oriented scheduling, and integrating test design with the core selection process.

Marine Combustion Practice reviews developments in marine combustion practice and covers topics ranging from combustion equipment for boilers to diesel injection equipment, nuclear reactors, and the use of natural gas in marine boilers. Automatic control of oil-fired marine boilers is discussed, along with fundamental types of injection pumps and factors affecting combustion in marine boilers. This book is divided into four sections and opens with a discussion on solid fuel used for marine purposes, including coal, and properties of coal affecting combustion and combustion equipment design. The reader is then introduced to fuel storage and supply systems; types of fuel injectors and fuel pumps; physics and technology of nuclear power; and sea transport of liquid petroleum gases used in marine boilers. Subsequent chapters deal with factors affecting marine combustion; characteristics of boil-off; and safety aspects of the use of natural gas in

marine boilers. This monograph will be a valuable source of information for marine engineers and for practitioners and research workers in the field of marine combustion.
