You Can Grow Your Own Orchids, Yes You Can! You're probably already thinking to yourself If I have to read a book to grow a flower in a pot, why should I bother?!

Yeah, I know -but to be honest, there are a lot of excellent things that come with being able to master at least growing one successful pot of orchids. For one thing, they're gorgeous! Who wouldn't want to say, "Yeah, I grew those..."? Damn right you would! Being a badass indoor gardener is one thing, but tackling tropical plants like orchids is a feat unto itself. It's an artform. Think about it for a second.

Most of us do not live in the climate conducive to these beauties just thriving on their own in the wild. Anyone who already actively grows and nurtures any species of orchid knows that you've got to climate control that environment like you wouldn't believe. It's not just about that, but you also must watch other factors too. It's an extremely rewarding yet very challenging experience. In addition, there are so many different species of orchid out

there that you can safely assume that each plant you grow is going to be unique to itself. You can get some that you know will definitely be the same color, size or general shape, but we all know that there are so many things unique to each plant. How many flower spikes you end up with after the first blooms dissipate, how many leaves you have, how tall it grows and so many other things are all going to be different. The cool thing is that with the right know-how, you can nurture one potted orchid for years before you have to kiss it goodbye. In fact, you might keep them growing for almost a decade without even realizing it if you can take care them properly. It will also bolster your confidence when it comes to indoor gardening. You might have never planted anything outside, but you can throw these puppies in a pot and watch them go for forever if you follow a few key pointers and stay on top of their care. You just need to lovingly embrace the hobby and be patient with the process. Heck, you could have a whole atrium or sunroom full of tropical flowers by the time you're finished fooling around with different kinds -and there are a lot of them! Just imagine

the possibilities... In this book, you're going to learn all about how to start off on the right foot with one of the cantankerous ones: orchids. So get out your gloves, grab a bag of potting mix, start jotting down supplies on a notepad, and get growing!

A Hands-On Primer for Every Season

Martha Stone

242 PAGES ILLUSTRATED IN COLOR Many people who would like to dedicate themselves to this hobby ask themselves: - Will I have the chance to organize a large greenhouse? - Will I have enough time to look after such fragile plants? - Will I be able to support the necessary financial commitment? These questions are wrong. The main question you need to ask yourself, to see if you will be a good grower, is another: what feeling do I have with orchids? The orchid is a unique flower in its eccentric perfection, it does not know the banality. It does not grow in an

impersonal environment, it is elegant in all its aspects, aristocratic in its needs. It blooms only if it finds the right conditions around it. In the East the perfection of the orchid is a symbol of purity. In the West the orchid is related to love and sensuality, therefore it becomes the symbol of passionate love. In its almost black-flowered varieties the orchid is also associated with the dark mystery and witchcraft. People who are attracted to orchids are sensual and innocent, simple and sophisticated. They love luxury. The roots of the orchid can feed on air by filtering nourishment from nothing, they are intricate but light. Who loves the orchid is very selective in his choices, he accepts to let only a small circle of people enter his life. Therefore, if you wish to dedicate yourself to the cultivation of orchids you should not ask yourself how much it costs. The right questions are these: - Do I have an independent temperament? - Do I have my own class and my original elegance? - Am I capable of innocence and passion, dedication and betrayal? - I only ask for the best from my life and the people I surround myself with? If all the answers are "yes", you are the

ideal candidate for growing orchids. You don't need much else. In fact it is possible to grow orchids even in a small vase held on the windowsill, as you would do with basil. Some varieties may require temperature and humidity which is not difficult to recreate in an ordinary apartment or on a balcony. Other varieties can grow outdoors, in the garden. If you really want to dedicate yourself to the cultivation of orchids you will surely find the right compromise between the needs of the plants and those of your spaces and your wallet. This book will provide you with all the information you need to start the journey that will turn you into an expert grower, ready to participate in all "flowers contest"

This particular word has become synonymous with grace, class, and luxury. And they are not as rare as they are supposed to be, even if they come in the "expensive desirable item" category. There are 20,000+ species of orchids growing all over the world. Most of them have not been classified at all and many species are still being discovered in remote corners of the earth, and their classification being debated by botanists all over the world today! Ever since orchids became a rage in the 19th century, with horticulturists growing them in hothouses and experimenting with them, more than hundred thousand cultivars and hybrids have sprung up from the original 20,000 varieties and species. So that is how Vanda, Cattleya, Dendrobium, and other popular orchid specimens came into the

public eye and social usage. Apart from the colorful and fragrant flowers, the leaves of many varieties are also considered to be ornamental. These leaves are perennial and they are going to live for a number of years. On the other hand, there are other varieties which are going to develop new leafy outgrowths, after shedding the old leaves every year. The ornamental leaves of *Macodes sandersoniana*, which is a species which can be found clinging to rocks instead of growing on the branches of trees has thin veins of gold and silver on the green leafy background. This is quite an unusual natural phenomena, and other orchid varieties also have mottled leaves due to the uneven distribution of pigmentation and chlorophyll.
