Capstone Classroom  
Apache Longbow Helicopter: Fire Control  
Radar Not Ready for Multiyear  
Procurement

**The Iraq War** DIANE Publishing  
"In April of 2003, a stunned world looked  
on as the armed forces of the United  
States and Britain conducted a lightning-  
fast military campaign against Iraq.  
Confounding predictions of failure, the  
Anglo-American victory brought down  
not just the Iraqi regime, but also much  
of the conventional wisdom about  
modern war. But even as U.S. and British  
forces occupied Basra, Tikrit, and Mosul,  
the Iraqi nation slipped into anarchy -  
and new military and security challenges  
emerged." "In this book, respected  
military analyst Anthony Cordesman  
provides the first in-depth examination  
of the key issues swirling around the  
most significant U.S. war since Vietnam.  
Finding answers is essential if we are to  
understand the United States' awesome  
power and its place in a new age of  
international terror and regional conflict.

Finding answers is also essential if we  
are to draw the proper lessons and  
understand the new challenges of  
conflict termination, peacemaking, and  
nation building."--BOOK JACKET.  
[Alternative Technologies to Replace  
Antipersonnel Landmines](#) Apache  
Longbow Helicopter: Fire Control Radar  
Not Ready for Multiyear Procurement  
The Longbow is a modification of the Apache  
helicopter that consists of an upgraded  
airframe, a newly developed radar, and  
the Longbow Hellfire missile. The Apache  
Longbow is designed to conduct  
precision attacks in adverse weather  
conditions, automatically engage  
multiple targets, provide fire and forget  
missile capability, and operate on the  
digital battlefield of the future. The  
radar, the key component of the  
Longbow, is designed to provide the  
helicopter with the capability to  
automatically detect, classify, and  
prioritize targets. In 1991, the Army  
planned to develop and procure 227  
Longbow Apache helicopters. In May  
1993, the program was restructured to  
upgrade the entire fleet of 758  
helicopters to the Apache Longbow  
configuration but outfit only 227 with the  
fire control radar and a more powerful

701C engine. Full rate production of both the Apache Longbow airframe and fire control radar was authorized in October 1995. The first contract for 10 fire control radars was awarded in March 1993, and the second contract was finalized in January 1997 for an additional 11 radars. The Army plans to award a multiyear contract for the fire control radar in December 1997.

Apache Longbow Helicopter Fire Control Radar Not Ready for Multiyear Procurement : Report to the Secretary of Defense Department of Defense Appropriations for Fiscal Year 1992 Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, One Hundred Second Congress, First Session Department of Defense Appropriations for Fiscal Year 1992: Research, development, test and evaluation Army Department of Defense Appropriations for 1995 Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, One Hundred Third Congress, Second Session Department of Defense Appropriations for ... Department of Defense Appropriations for 1995: Defense reinvestment and conversion programs Department of Defense Appropriations for 1997: Army acquisition programs ... Ballistic Missile Defense Organization Department of Defense Appropriations for 1994: Research, development, test, and evaluation Army RD & A Bulletin Department of Defense Appropriations for 1997 Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, One Hundred Fourth Congress, Second Session Training Analysis and Feedback Aids (TAAF Aids) Study for Live Training Support "Maneuver Combat Training

Center (CTC) and home station requirements for exercise control and training feedback are intensive. With the advent of battlefield digitization; tactical decision aids; smart, intelligent, and brilliant munitions; advances in non-lethal weapons, and new reconnaissance, surveillance, and target acquisition (RSTA) systems, the workload for trainers continues to spiral. Force modernization is creating new control and feedback tasks that have the potential to rob trainers of time they would otherwise spend observing, coaching, and facilitating the learning of exercise players. This study: (1) Identifies the impact of force modernization on future exercise control and training feedback functions. (2) Identifies tasks involved in after-action review (AAR) preparation, observer/controller (OC) coordination and mentoring, and take-home package construction. (3) Provides strategies to reduce OC and Training Analysis Facility (TAF) workload. (4) Identifies payoffs in task reduction achieved by each strategy. (5) Does not provide technical solutions or analysis of task criticality, complexity, duration, or frequency for trainer tasks."--DTIC.

Handbook of Defence Electronics and Optronics Fundamentals, Technologies and Systems

DoD plans to spend more than \$200 billion on interdiction weapons over the next 15 to 20 years to add to their extensive capabilities to interdict an enemy. Modernizing U.S. forces is vital to preserving DoD's combat edge, but it also challenges DoD to make investments only "where there is clearly a substantial payoff." This report evaluates the military's current and future aggregate interdiction assets for striking enemy targets, and the effect of

the planned modernization programs on total interdiction capabilities and alternatives to those programs.

Handbook of Defence Electronics and Optronics Anil K. Maini, Former Director, Laser Science and Technology Centre, India First complete reference on defence electronics and optronics Fundamentals, Technologies and Systems This book provides a complete

account of defence electronics and optronics. The content is broadly divided into three categories: topics specific to defence electronics; topics relevant to defence optronics; and topics that have both electronics and optronics counterparts. The book covers each of the topics in their entirety from fundamentals to advanced concepts, military systems in use and related technologies, thereby leading the reader logically from the operational basics of military systems to involved technologies and battlefield deployment and applications. Key features: • Covers fundamentals, operational aspects, involved technologies and application potential of a large cross-section of military systems. Discusses emerging technology trends and development and deployment status of next generation military systems wherever applicable in each category of military systems. • Amply illustrated with approximately 1000 diagrams and photographs and around 30 tables. • Includes salient features, technologies and deployment aspects of hundreds of military systems, including: military radios; ground and surveillance radars; laser range finder and target designators; night visions devices; EW and EO jammers; laser guided munitions; and military communications equipment and satellites. Handbook of Defence Electronics and Optronics is an essential guide for graduate students, R&D scientists, engineers engaged in manufacturing defence equipment and professionals handling the operation and maintenance of these systems in the Armed Forces.

*Military Procurement Subcommittee Hearings on Title I--procurement : Hearings Held March 19, 21, 22, 29, 1996* ABC-CLIO

Provides an overview of the major weapons systems & support equipment the Army is currently developing or has fielded. Sections include: project and sustain; protect the force; win the information war; conduct precision strikes; & dominate the maneuver battle. Over 100 color photos & drawings. Each weapon system described in detail as to mission, characteristics, foreign counterpart, program status, projected activities, & prime contractor.

Appendices: contractors by system, contractors by state, points of contact & an index. Comprehensive!

**What Went Right, What Went Wrong, and Why** DIANE Publishing

Provides an analysis of the military actions taken by the forces of the United States and its coalition allies during the Iraq War.

**Appropriations for 1997** John Wiley & Sons

This book examines potential technologies for replacing antipersonnel landmines by 2006, the U.S. target date for signing an international treaty banning these weapons. Alternative Technologies to Replace Antipersonnel Landmines emphasizes the role that technology can play to allow certain weapons to be used more selectively, reducing the danger to uninvolved civilians while improving the effectiveness of the U.S. military.

Landmines are an important weapon in the U.S. military's arsenal but the persistent variety can cause unintended casualties, to both civilians and friendly forces. New technologies could replace some, but not all, of the U.S. military's antipersonnel landmines by 2006. In the period following 2006, emerging technologies might eliminate the landmine totally, while retaining the necessary functionalities that today's mines provide to the military.

Army RD & A Bulletin

The Apache Longbow helicopter is designed to conduct precision attacks in adverse weather and on battlefields obscured by smoke, automatically engage multiple targets, and provide fire-and-forget missile capability. The

Apache Longbow configuration consists of a modified airframe, a fire control radar, and a new Longbow (radio frequency) Hellfire missile. The Army plans to upgrade the entire fleet of 758 Apache helicopters to the Apache Longbow configuration but outfit only 227 with the radar and a more powerful 701C engine. The remaining 531 non-radar-equipped Apache Longbows will be equipped with the less powerful 701 engine, even though they will be reconfigured to accept the radar and upgraded 701C engine. In its fiscal year 2000-2005 program plan, the Army has proposed a reduction in the number of Apaches that will be converted to the Apache Longbow configuration. The April 1994 Apache Longbow's operational requirements document (ORD) prescribes performance capabilities required for the system's survivability and lethality. These capabilities include meeting the vertical flight requirement, carrying the Longbow Hellfire missile, and passing target data when in line of sight and not in the line of sight. For the Apache Longbow, the Army has identified performance objectives (desired capabilities) and performance thresholds (minimum capabilities). The Army designated selected thresholds as key performance parameters. The Apache Longbow program needs to be reassessed because the helicopter does not meet two key user requirements. The Army's 227 radar-equipped Apache Longbow helicopters will be too heavy to achieve the validated VROC requirement of 450 feet per minute in the combat mission configuration when carrying a full fuel load and 12 missiles.
