This collection brings together internationally-renowned experts to offer the broadest and most comprehensive review available regarding how politics shapes inclusive development in the global south. Each aspect of development is covered, namely social,

economic, environmental and cultural, with each substantive chapter offering a systematic review of the evidence in the relevant field. The collection also offers new easy of thinking about the politics of development, and a range of practical suggestions for development policy and practice. *Organising Care in a Time of Covid-19* Walter de Gruyter GmbH & Co KG
The health of

scientific enterprise has become a critical political and social issue as nation states tackle austerity, diversity, global challenges, whilst simultaneously supporting a competitive and innovative national economy. A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently. As

the information support system struggles with adapting from a print-based to a digital process, the dysfunctionality current within STEM publishing in particular becomes evident. New ways of supporting research are emerging which require a new approach to publishing, an approach which takes on board the many demographic, social, technical and administrative

changes taking place in both science itself and society. A radical strategic assessment is required and this book tracks key aspects required for any new future strategy. This book provides a catalogue of issues to which a future STEM information industry will need to adapt. They range from the effects of technology on the neurological processes of research to

the growing use of technology to speed up the exchange of information among groups and collaboratories ; from considerations about quality control yet maintaining intellectual ownership; from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal. There is the neglected non-academic market and its need to share in the results of the

research effort, often through partnership and being part of a 'hive mind'. This is the large world of the unaffiliated knowledge workers, of which academia is numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution

which takes on board the perfect storm of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically-focused industry within the next decade. The implications for the current STEM stakeholders are profound. **History of**

This open access book presents contemporary perspectives on the role of a learning society from the lens of leading practitioners, experts from universities, governments, and industry leaders. The think pieces argue for a learning society as a major driver of change with far-reaching influence on learning to serve the needs of economies and societies.

The book is a testimonial to the importance of learning communities. It highlights the pivotal role that can be played by non-traditional actors such as city and urban planners, citizens, transport professionals, and technology companies. This collection seeks to contribute to the discourse on strengthening the fabric of a learning society crucial for future economic and social

development, particularly in the aftermath of the coronavirus disease.

Not so long ago, it seemed the intellectual positions on globalization were clear, with advocates and opponents making their respective cases in decidedly contrasting terms. Recently, however, the fronts have

shifted dramatically. The aim of this publication is to contribute philosophical depth to the debates on globalization conducted within various academic fields – principally by working out its normative dimensions. The interdisciplinary nature of this book’s contributors also serves to scientifically ground the ethical-philosophical discourse on global responsibility. Though by no

means exhaustive, the expansive scope of the works herein encompasses such other topics as the altering consciousness of space and time, and the phenomenon of globalization as a discourse, as an ideology and as a symbolic form. **Balanced Scorecard Step-by-Step** University of California Press This book explores tried and tested strategies that support student and

faculty engagement and inclusion in the academy. These strategies are anchored by a brief exploration of the history and effect/s of exclusion and deprivelege in higher education. However, while many publications exploring academic inequality focus on the causes and impacts of structural, psychological and cultural exclusion based on racism, sexism,

classism and ableism, they rarely engage in interventions to expose and combat such de/privilege. Capturing examples of inclusive practices that are as diverse as student and faculty populations, these strategies can be easily translated and employed by organisations, collectives and individuals to recognise and combat social and academic exclusion within higher education environments.

 Infobase Publishing
 Over the past few decades, Austin, Texas, has made a concerted effort to develop into a “technopolis,” becoming home to companies such as Dell and numerous start-ups in the 1990s. It has been a model for other cities across the nation that wish to become high-tech centers while still retaining the

livability to attract residents. Nevertheless, this expansion and boom left poorer residents behind, many of them African American or Latino, despite local and federal efforts to increase lower-income and minority access to technology. This book was born of a ten-year longitudinal study of the digital divide in Austin—a study that gradually evolved into a broader inquiry into

<p>Austin’s history as a segregated city, its turn toward becoming a technopolis, what the city and various groups did to address the digital divide, and how the most disadvantaged groups and individuals were affected by those programs. The editors examine the impact of national and statewide digital inclusion programs created in the 1990s, as well as what happened</p>	<p>when those programs were gradually cut back by conservative administrations after 2000. They also examine how the city of Austin persisted in its own efforts for digital inclusion by working with its public libraries and a number of local nonprofits, and the positive impact those programs had. <i>Exhibiting War</i> BPS Books This Budget: i) increases the main rate of class 4</p>	<p>National Insurance Contributions from 9% to 10% in April 2018 and to 11% in April 2019; and ii) reduces the dividend allowance from £5,000 to £2,000 from April 2018. Personal allowance will also rise to £11,500 in April 2017. The Budget further announces polices to create sector specific routes to employment; fund maintenance loans for students</p>

Social Policy for Social Work, Social Care and the Caring Professions

Hodder Education

The COVID-19 pandemic has led to radical transformations in the organisation

and delivery of health and care services across the world. In many countries, policy makers have rushed to re-organise care services to meet the surge demand of COVID-19, from re-purposing existing services to creating new 'field' hospitals. Such strategies signal important and sweeping changes in the organisation of both 'COVID' and 'non-COVID' care, whilst asking more

fundamental questions about the long-term organisation of care 'after COVID'. In some contexts, the pandemic has exposed the fragilities and vulnerabilities of care systems, whilst in others, it has shown how services are organised to be more resilient and adaptive to unanticipated pressures. The COVID-19 pandemic presents a rare opportunity to examine empirically

and to develop new theoretical frameworks on how and why health systems adapt to such unusual and intense pressures. International contributors consider how responses to COVID-19 are transforming the organisation and governance of health and care services and explore questions around strategic leadership at local, regional, national and transnational level. The

book offers unique insight and analysis on the dynamics of policy-making, the organisation and governance of care organisations, the role of technologies in governing, the changing role of professionals and the possibilities for more resilient care systems. **Nature Inc.** Springer Nature The Media Book provides today's students with a comprehensive

foundation for the study of the modern media. It has been systematically compiled to map the field in a way which corresponds to the curricular organization of the field around the globe, providing a complete resource for students in their third year to graduate level courses in the U.S. Oxford University Press This book is about innovation, reflection and

inclusion. Cultural innovation is something real that tops up social and technological innovation by providing the reflective society with spaces of exchange in which citizens engage in the process of sharing their experiences while appropriating common goods content. We are talking of public spaces such as universities, academies, libraries, museums, science-centres, but

also of any place in which co-creation activities may occur. The argument starts with the need for new narratives in the history of philosophy, which can be established through co-creation, the motor of cultural innovation. The result is redefining the history of philosophy in terms of a dialogical civilization by ensuring continuous translations, individual processes of reflection and collective

processes of inclusion. Readers will grasp the effectiveness of the history of philosophy in societies that are inclusive, innovative and reflective. *Culture, Economy, and Colonial Legacies* Elsevier How will governments and courts protect civil liberties in this new era of hacktivism? *Ethical Hacking* discusses the attendant moral and legal issues. The first part of the 21st

century will likely go down in history as the era when ethical hackers opened governments and the line of transparency moved by force. One need only read the motto “we open governments” on the Twitter page for Wikileaks to gain a sense of the sea change that has occurred. Ethical hacking is the non-violent use of a technology in pursuit of a cause—political or

otherwise—which is often legally and morally ambiguous. Hacktivists believe in two general but spirited principles: respect for human rights and fundamental freedoms, including freedom of expression and personal privacy; and the responsibility of government to be open, transparent and fully accountable to the public. How courts and governments will deal with

hacking attempts which operate in a grey zone of the law and where different ethical views collide remains to be seen. What is undisputed is that Ethical Hacking presents a fundamental discussion of key societal questions. A fundamental discussion of key societal questions. This book is published in English. - La première moitié du XXIe siècle sera sans doute reconnue comme

l'époque où le piratage éthique a ouvert de force les gouvernements, déplaçant les limites de la transparence. La page twitter de Wikileaks enchâsse cet ethos à même sa devise, « we open governments », et sa volonté d'être omniprésent. En parallèle, les grandes sociétés de technologie comme Apple se font compétition pour produire des produits de plus en plus sécuritaires et à protéger les données de leurs clients, alors même que les gouvernements tentent de limiter et de décrypter ces nouvelles technologies d'encryption. Entre-temps, le marché des vulnérabilités en matière de sécurité augmente à mesure que les experts en sécurité informatique vendent des vulnérabilités de logiciels des grandes technologies, dont Apple et Google, contre des sommes allant de 10 000 à 1,5 million de dollars. L'activisme en sécurité est à la hausse. Le piratage éthique est l'utilisation non-violence d'une technologie quelconque en soutien d'une cause politique ou autre qui est souvent ambiguë d'un point de vue juridique et moral. Le hacking éthique peut désigner les actes de vérification de pénétration professionnelle ou d'experts en sécurité informatique,

<p>de même que d'autres formes d'actions émergentes, comme l'hacktivisme et la désobéissance civile en ligne. L'hacktivisme est une forme de piratage éthique, mais également une forme de militantisme des droits civils à l'ère numérique. En principe, les adeptes du hacktivism croient en deux grands principes : le respect des droits de la personne et les libertés fondamentale s, y compris la</p>	<p>liberté d'expression et à la vie privée, et la responsabilité des gouvernement s d'être ouverts, transparents et pleinement redevables au public. En pratique, toutefois, les antécédents comme les agendas des hacktivistes sont fort diversifiés. Il n'est pas clair de quelle façon les tribunaux et les gouvernement s traiteront des tentatives de piratage eu égard aux zones grises</p>	<p>juridiques, aux approches éthiques conflictuelles, et compte tenu du fait qu'il n'existe actuellement, dans le monde, presque aucune exception aux provisions, en matière de cybercrime et de crime informatique, liées à la recherche sur la sécurité ou l'intérêt public. Il sera également difficile de déterminer le lien entre hacktivism et droits civils. Ce livre est publié en anglais.</p>
