In December 1968, the crew of Apollo 8 captured images depicting Earth hanging like a lonely fruit in the vast darkness of space. The social and spiritual shock of that photograph—and those which followed—never fully diminished, even as Apollo missions followed at an incredible pace, including the first lunar landing on July 20, 1969. Moonshots is the definitive photographic chronicle of NASA space exploration—a giant slipcased book featuring more than 200 remarkable photographs from that eventful era created almost exclusively on large-format Hasselblad cameras. Though a number of these images have been reproduced in books and magazines over the years, one attribute of this incredible collection has seldom been exploited: the sheer size and

resolution of the photography. Aerospace author Piers Bizony scoured NASA's archives of Hasselblad film frames to assemble the space fan's ultimate must-have book—a gorgeous large-format hardcover presented in a heavy slipcase with die-cuts to represent the phases of the moon. This resulting volume extracts a stunning selection of photographs captured by astronauts using Hasselblad equipment, many of them seldom previously published, let alone in such a lavish package. The Apollo voyages form the centerpiece of this amazing collection, but equally fabulous images from precursor Gemini missions are also featured, along with later photographs chronicling Space Shuttle missions and even the construction of the International Space Station.

UNLEASHING THE PARTS is a memoir by a woman whose life never seemed quite right to her, from early childhood on. Her narrative shifts back and forth in time, somehow conveying, all at once, the voices of the small child, the troubled

adolescent, the recovered addict, the fierce mother of two-the parts the author has struggled to release.

Air Conditioning Service Manual

Haynes Manuals N. America, Incorporated
This popular guide focuses on common misconceptions in the application of the Wiring Regulations. It explains in clear language those parts of the Regs that most need simplifying, outlining the correct procedures to follow and those to avoid. Emphasis has been placed on areas where confusion and misinterpretation is common, such as earthing and bonding, circuit design and protection, and in particular the increased use of RCDs. It is an affordable reference for all electrical contractors and other workers involved in electrical installations. It will enable safe and efficient compliance and help answer queries quickly to ensure work complies with the latest version of the Wiring Regulations. With the coverage carefully matched to the syllabus of the City & Guilds Certificate in the Requirements for Electrical Installations (2382-10 and 2382-20) and containing sample exam questions and answers, it is also an ideal revision guide. Brian Scaddan, I Eng, MIET, is a consultant for and an Honorary Member of City & Guilds. He has over 35

years' experience in Further Education and training. He is Director of Brian Scaddan Associates Ltd, an approved City and Guilds and NICEIC training centre offering courses on all aspects of Electrical Installation Contracting including the C&G 2382 series. He is also a leading author of books on electrical installation.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles Routledge

Continuing the explorations begun in the first two Producing Theory volumes, this book investigates some of the tensions generated in the spaces enabled by the confluence of the formerly disparate activities of producing and consuming media. Multiple and varied theories--some still emerging--are invoked in attempts to illuminate the spaces between what

previously had been neatly-separated components of media systems. This book is useful in a number of courses such as media culture and theory, introduction to new media, the Internet and the audience, new media theory and research, mass communication theory, emerging media, critical analysis and new media, concepts of new media, new media participants, new media in a democratic society, critical studies in new media, new media and social media, digital media studies, participatory media, media audiences in a digital world, digital cultures and social media, Web culture and new media studies, introduction to new media, new media and society, and more.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade,

cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and

implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
