Examination Papers EduGorilla

Community Pvt. Ltd.

Exploring the roots of Canadian consumer culture, Purchasing Power uncovers the meanings that Canadians have attached to consumer goods.

Focusing on women during the early twentieth century, it reveals that for thousands of Canadians between the 1890s and World War II, consumption was about not only survival, but also civic expression. Offering a new perspective on the temperance, conservation, home economics, feminist, and co-operative movements, this book brings women's consumer interests to

the fore. Due to their exclusion from formal politics and paid employment, many Canadian women turned their consumer roles into personal and social opportunities. They sought solutions in the consumer sphere to isolation, upward mobility, personal expression, and family survival. They transformed consumer culture into an arena of political engagement. Yet if Canadian women viewed consumption as a tool of empowerment, so did they wield consumption as a tool of exclusion. As Purchasing Power reveals, Canadian women of privileged race and class status tended to disparage racialized and lower income women's consumer habits. In so doing, they constructed notions of taste that defined who – and who did not – belong in the modern

Canadian nation.

GATE Mechanical Engineering Exam Prep Book 2022 | 10 Full-length Mock Tests + 6 Previous Year Papers EduGorilla Community Pvt. Ltd.

This product covers the following: 10 Sample Papers-5 Solved & 5 Self-Assessment Papers strictly designed as per the latest Board Specimen Paper-2023 2022 Specimen Paper analysis On-Tips Notes & Revision Notes for Quick Revision Mind Maps & Mnemonics with 1000+concepts for better learning 200+MCQs & Objective Type Questions for practice

Bergen's Marine Engineer EduGorilla Community Pvt. Ltd.

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap

between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.
