User experience (UX) design has traditionally been a deliverables-based practice, with wireframes, site maps, flow diagrams, and mockups. But in today's web-driven reality, orchestrating the entire design from the get-go no longer works. This hands-on book demonstrates Lean UX, a deeply collaborative and cross-functional process that lets you strip away heavy deliverables in favor of building shared understanding with the rest of the product team. Lean UX is the evolution of product design; refined through the real-world experiences of companies large and small, these practices and principles help you maintain daily, continuous engagement with your teammates, rather than work in isolation. This book shows you how to use Lean UX on your own projects. Get a tactical understanding of Lean UX—and how it changes the way teams work together Frame a vision of the problem you're solving and focus your team on the right outcomes Bring the designer's tool kit to the rest of your product team Break down the silos created by job titles and learn to trust your teammates Improve the quality and productivity of your teams, and focus on validated experiences as opposed to deliverables/documents

Learn how Lean UX integrates with Agile UX

The acclaimed social psychologist and New York Times–bestselling author examines how to maintain hope and humanity in an increasingly technological society. Life often contains events that do not have the outcomes we desire. However, many situations offer the possibility of a better outcome later. We simply need hope. But what is hope? What happens if we choose it? And what happens if we give it up? In *The Revolution of Hope*, Erich Fromm contemplates the definition of hope and what it means to be human. When the book was first published in 1968, Fromm saw society heading towards complete mechanization, devoted to maximal material output and consumption, directed by computers. With this book, he poses to the reader the choice between becoming a helpless cog in the machine or embracing humanism and hope. “An uplifting exploration of the definition of hope, what it truly means to be human, and steps that should be taken to promote humanization in an increasingly disconnected and technology-driven society.” —Midwest Book Review

The Extreme Future National Geographic Books

In past twenty years or so, information technology has influenced and changed every aspect of our lives and our cultures. Without various IT-based applications, we would find it difficult to keep information stored securely, to process information and business efficiently, and to communicate information conveniently. In the future world, ITs and information engineering will play a very important role in convergence of computing, communication, business and all other computational sciences and application and it also will influence the future world's various areas, including science, engineering, industry, business, law, politics, culture and medicine. The International Conference on Information Engineering and Applications (IEA) 2011 is intended to foster the dissemination of state-of-the-art research in information and business areas, including their models, services, and novel applications associated with their utilization. International Conference on Information Engineering and Applications (IEA) 2011 is organized by Chongqing Normal University, Chongqing University, Shanghai Jiao Tong University, Nanyang Technological University, University of Michigan and the Chongqing University of Arts and Sciences, and is sponsored by National Natural Science Foundation of China (NSFC). The objective of IEA 2011 is to will provide a forum for engineers and scientists in academia, industry, and government to address the most innovative research and development . Information Engineering and

Applications provides a summary of this conference including contributions for key speakers on subjects such as technical challenges, social and economic issues, and ideas, results and current work on all aspects of advanced information and business intelligence.

his anthology compiled from volumes 3-10 of *Design Issues*, includes material from areas seldom discussed in existing surveys and will facilitate the general discourse within the design community on a wide range of conceptual and methodological issues of contemporary design history. Design history has emerged in recent years as a significant field of scholarly research and critical reflection. With their interest in the conceptualization, production, and consumption of objects (large and small, unique or multiple, anonymous or signed) and environments (ephemeral or enduring, public or private), design historians investigate the multiple ways in which intentionally produced objects, environments, and experiences both shape and reflect their historical moments. This anthology compiled from volumes 3-10 of *Design Issues*, includes material from areas seldom discussed in existing surveys and will facilitate the general discourse within the design community on a wide range of conceptual and methodological issues of contemporary design history. Individual essays investigate various aspects of design in the modern era. They provide fresh insights on familiar figures such as Harley Earl and Norman Bel Geddes and shed new light on neglected aspects of design history such as the history of women in early American graphic design or the history of modern design in China. The essays are grouped in three broad categories: Graphic Design, Design in the American Corporate Milieu, and Design in the Context of National Experiences. Contributors David Brett, Bradford R. Collins, Dennis P. Doordan, David Gartman, Gyorgy Haiman, Larry D. Luchmansingh, Roland Marchand, Enric Satué, Mitchell Schwarzer, Paul Shaw, Svetlana Sylvestrova, Ellen Mazur Thomson, Matthew Turner, John Turpin, Shou Zhi Wang. *A Design Issues Reader*

This informative volume provides new insights with scientific evidence on the uses of medicinal plants in the treatment of certain diseases. It reviews various therapies with herbal phytoconstituents for certain types of disorders, modes of action, and pharmacological screening. It focuses on potential benefits of herbal extracts and bioactive compounds for human health care, provides a comparative phytoconstituent analysis of selected medicinal plants using GCMS/FTIR techniques, and discusses the role of herbal medicines in female genital infections. It goes on to look at the health-boosting properties of cabbage and the functional properties of milk yam (*Ipomoea digitata* L.).

"Marzano concisely and effectively shows how his three domains of learning and the New Taxonomy can be operationalized for teachers and administrators. This book integrates objectives, instructional approaches, and assessment options so that these critical aspects of teaching are aligned to promote student learning." —James McMillan, Professor and Chair, Foundations of Education Virginia Commonwealth University A hands-on guide for applying the New Taxonomy to develop meaningful and targeted educational objectives and assessments. Translating mandated standards into concrete objectives and then creating appropriate tasks to assess student learning of those objectives can be a challenge for educators. This practical resource provides a step-by-step process that shows readers how to make designing educational objectives and creating appropriate assessment tasks a part of their day-to-day practice. Written as a stand-alone volume, *Designing and Assessing Educational Objectives* reviews the framework and basic principles of Marzano's New Taxonomy and illustrates how educators can utilize Marzano's model to assess student performance on a broad scale or for a specific unit of instruction or grading period. The book explores objectives and tasks for each of the six levels of mental processing—retrieval, comprehension, analysis, knowledge utilization, metacognition, and self-system thinking—and features: Benchmark statements that provide a starting point for the process Step-by-step models, helpful diagrams, and useful charts Numerous detailed examples from multiple subject areas and grade levels Application of the taxonomy's three domains of knowledge: information, mental procedures, and psychomotor procedures Comprehensive and profound, this resource is essential for teachers, school and district administrators, curriculum directors, and assessment specialists seeking to apply standards to curriculum and instruction for measurable results.

The increasing number of older people in the United States has served to focus attention upon the processes of aging and the

effectiveness of social programs for the elderly. In order to plan effective programs, accurate social measures are necessary. Now, more than ever before, researchers require conceptually explicit instruments designed to assess individual and social behaviors, attitudes, and traits in the elderly population. This is the first in a three-volume series designed to serve the needs of researchers, evaluators, and clinicians in assessing the instruments used in the field of aging. The measures review in Volume 1 focus on the cognitive reactions of older people to aging and on the assessments of aging made by people who are not yet old. This volume also contains the series introduction which explains the methods used for evaluating the instruments and assesses the status of gerontological measurement today. Each chapter is devoted to instruments in a particular subject area such as intellectual functioning, personality, self-esteem, and ethnic group identification. Most chapters are composed of three parts. First, there is a concise narrative review of the major theoretical concerns and measurement strategies within that particular research domain. The second part is a collection of abstracts, each of which presents a conceptual definition and a description of a specific instrument together with data about samples, reliability, validity, scaling properties, and correlations with age. Whenever possible the instruments themselves constitute the third part of the chapter.

Research Instruments in Social Gerontology Corwin Press

It's Little Red Riding Hood as you've never seen her before in this funny, feminist spin on the fairy tale, from award-winning author Ursula Vernon Most monsters know better than to mess with Princess Harriet Hamsterbone. She's a fearsome warrior, an accomplished jouster, and is so convincing that she once converted a beastly Ogrescat to vegetarianism. So why would a pack of weasel-wolf monsters come to her for help? Well, there's something downright spooky going on in the forest where they live, and it all centers around a mysterious girl in a red cape. No one knows better than Harriet that little girls aren't always sweet. Luckily there's no problem too big or bad for this princess to solve. In this sixth installment of her whip-smart Hamster Princess series, Ursula Vernon once again upends fairy tale tropes and subverts gender stereotypes to brilliant effect. This is a "Once Upon a Time" like you've never seen before.
