Pharmacognosy (the science of biogenic or nature-derived pharmaceuticals and poisons) has been an established basic pharmaceutical science taught in institutions of pharmacy education for over two centuries. Over the past 20 years though it has become increasingly important given the explosion of new drugs, phytomedicines (plant medicines), nutraceuticals and dietary supplements – all of which need to be fully understood, tested and regulated. From a review of the previous edition: ‘Drawing on their wealth of experience and knowledge in this field, the authors, who are without doubt among the finest minds in pharmacognosy today, provide useful and fascinating insights into the history, botany, chemistry, phytotherapy and importance of medicinal plants in some of today’s healthcare systems. This is a landmark textbook, which carefully brings together relevant data from numerous sources and provides, in an authoritative and exhaustive manner, cutting-edge information that is relevant to pharmacists, pharmacognocists, complementary practitioners, doctors and nurses alike.’ *The Pharmaceutical Journal* ‘This is an excellent text book which provides fascinating insights into the world of pharmacognosy and the authors masterfully integrated elements of orthodox pharmacognosy and phytotherapy. Both the science student and the non-scientific person interested in phytotherapy will greatly benefit from reading this publication. It is comprehensive, easy to follow and after having read this book, one is so much more aware of the uniqueness of phytomedicines. Does Echinacea fight the common cold? Does St. John's Wort (SJW) really counteract depression? What about chondroitin for joint health? Today's healthcare professionals are increasingly confronted with questions from patients who want to use herbal supplements to treat various conditions. A critical and scientific assessment of medicinal plant research by an internationally recognized researcher and writer in the field, Tyler's Herbs of Choice: The Therapeutic Use of Phytomedicinals, Third Edition combines the scientific aspects of herbal medicine, phytomedicine, and pharmacognosy with the modern clinical trials that support the rationale for using plant products in healthcare. A Decade's Worth of Updates The original edition of this volume was authored by the late Professor Varro E. Tyler, a true giant in the field of pharmacognosy and pharmacy education. Following in Tyler's footsteps, Dennis V.C. Awang, co-editor of the journal Phytomedicine, recognized the need for a revised third edition, in light of how quickly the clinical literature surrounding the dietary supplement market is growing. Millions of consumers are demanding natural treatment options from their doctors and pharmacies in a variety of forms, from herbal teas to tinctures and capsules. Tyler's Herbs of Choice: The Therapeutic Use of Phytomedicinals, Third Edition effectively fosters understanding in patients and practitioners of the role that herbs and phytomedicinal products can play in both self-care and healthcare.

Before the concept of history began, humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants (MAPs) that were food and medicine. Today, a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health. The international market is also quite welcoming for MAPs and essential oils. The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils. These consumer choices lead to growing preference for organic and herbal based products in the world market. As the benefits of medicinal and aromatic plants are recognized, these plants will have a special role for humans in the future. Until last century, the production of botanicals relies to a large degree on wild-collection. However, the increasing commercial collection, largely unmonitored trade, and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore, medicinal and aromatic plants are of high priority for conservation. Given the above, we bring forth a comprehensive volume, "Medicinal and Aromatic Plants: Healthcare and Industrial Applications", highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic.
