Clinical and Operational Applications

Springer Science & Business Media
Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes

and behavior. Yet attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that other people—say, rich people— favor something may be sufficient to make another person favor it. People’s own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People’s belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes of The Handbook of Attitudes provide authoritative, critical surveys of

theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. This second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations, aggression, migrations, advertising, accounting, education, and the environment.

Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience.
