Interactive Approaches to Second Language Reading Wiley
Winner of the SAGE/ILTA Book Award 2016 The Routledge Handbook of Language Testing will provide a comprehensive account of the area of language assessment and testing. Written by leading specialists from around the world, this volume brings together approximately 35 authoritative articles (around 8000 words each). The proposed outline for the Handbook (below) is divided into ten sections. The section titles reflect the contents of their Language Testing and Assessment –textbook in our RAL series and sketch a useful overview of the discipline. Each chapter has been carefully selected to relate to key issues raised in the respective topic, providing additional historical background, critical discussion, reviews of key research methods, and an assessment of what the future might hold.

Seven years ago Manfred Pienemann proposed a novel psycholinguistic theory of language development, Processability Theory (PT). This volume examines the typological plausibility of PT. Focusing on the acquisition of Arabic, Chinese and Japanese the authors demonstrate the capacity of PT to make detailed and verifiable predictions about the developmental schedule for each language. This cross-linguistic perspective is also applied to the study of L1 transfer by comparing the impact of processability and typological proximity. The typological perspective is extended by including a comparison of different types of language acquisition. The architecture of PT is expanded by the addition of a second set of principles that contributes to the formal modeling of levels of processability, namely the mapping of argument-structure onto functional structure in lexical mapping theory. This step yields the inclusion of a range of additional phenomena in the processability hierarchy thus widening the scope of PT.

Formulaic sequences (FS) are now recognized as an essential

element of language use. However, research on FS has generally been limited to a focus on description, or on the place of FS in L1 acquisition. This volume opens new directions in FS research, concentrating on how FS are acquired and processed by the mind, both in the L1 and L2. The ten original studies in the volume illustrate the L2 acquisition of FS, the relationship between L1 and L2 FS, the relationship between corpus recurrence of FS and their psycholinguistic reality, the processes involved in reading FS, and pedagogical issues in teaching FS. The studies use a wide range of methodologies, many of them innovative, and thus the volume serves as a model for future research in the area. The volume begins with three survey chapters offering a background on the characteristics and measurement of FS.

Man Booker International Prize finalist “Brave and ingenious.”
—The New York Times “Gripping, darkly humorous . . . profound.”
—Phil Klay, bestselling author and National Book Award winner for *Redeployment* “Extraordinary . . . A devastating but essential read.”
—Kevin Powers, bestselling author and National Book Award finalist for *The Yellow Birds* From the rubble-strewn streets of U.S.-occupied Baghdad, Hadi—a scavenger and an oddball fixture at a local café—collects human body parts and stitches them together to create a corpse. His goal, he claims, is for the government to recognize the parts as people and to give them proper burial. But when the corpse goes missing, a wave of eerie murders sweeps the city, and reports stream in of a horrendous-looking criminal who, though shot, cannot be killed. Hadi soon realizes he’s created a monster, one that needs human flesh to survive—first from the guilty, and then from anyone in its path. A prizewinning novel by “Baghdad’s new literary star” (The New York Times), *Frankenstein in Baghdad* captures with white-knuckle horror and black humor the surreal reality of contemporary Iraq.

New Interchange Resource Book Intro Springer Nature

English is increasingly becoming the world's lingua franca. If we are not native speakers of one of the many varieties of English, then we may be students of English, or use English regularly for academic or business purposes. The English Language series, which is international in focus, aims to synthesize the wealth of

existing linguistic research both on and in English. Each volume in the series is designed to present these findings in an accessible, enlightening and entertaining way not only to students of English linguistics but to learners and users of English across the globe. The English Writing System describes how writing is not simply ancillary to other aspects of language but vitally important to almost everything we do, from signing our wills to sending a text message. This book discusses the mechanics of the writing systems of English; the different ways people process words on a page and the mistakes they can make; how children and second language learners acquire these systems; the historical development of the language and the progress of writing technology: in short, the effectiveness of the writing systems of English. Combining an academic perspective from linguistics and psychology with insights into everyday spelling mistakes, *The English Writing System* will interest students and teachers of linguistics, literature, the English language, psychology and education.

This book provides a systematic and comprehensive overview of knowledge graph, covering all aspects including the theoretical foundations, key techniques and methodologies, and various typical applications. Special focus is given to the practical methods for knowledge graph construction and management, especially methods for constructing knowledge graphs from texts and from Encyclopedia, and methods for knowledge fusion and reasoning. It can serve as reference book for researchers and students new to knowledge graph. From this book, the readers will learn how to construct large-scale knowledge graphs from different sources, how to manage multiple knowledge graphs and do reasoning with a knowledge graph. Some basic knowledge on discrete mathematics, probability and statistics, data structure, and databases is required to understand the book content well. *ACTIVE Skills for Reading 4* Springer Science & Business Media
Introducing English for Specific Purposes presents the key concepts and practices of ESP in a modern, balanced, and comprehensive way. This book defines ESP and shows how the approach plays a crucial role in the world of English language

teaching. Explaining how needs analysis, language and learning objectives, materials and methods, and evaluation combine to form the four main pillars of ESP, the book includes: practical examples that illustrate how the core theories and practices of ESP can be applied in real-world academic and occupational settings; discussion of some of the most hotly debated issues in ESP; insights on how ESP courses can be organized and integrated to form a complete program; reflection boxes, practical tasks, extension research questions, and resources for further reading in each chapter. *Introducing English for Specific Purposes* serves as an ideal textbook for graduate and advanced undergraduate students studying courses on English for Specific Purposes or English for Academic Purposes, as part of degrees in English for Specific Purposes, Education, ELT, Applied Linguistics, TESOL or TEFL. This comprehensive publication is also an invaluable reference resource for pre-service and in-service teachers of ESP, and for English program managers and administrators.

This monograph is the first survey of neural approaches to conversational AI that targets Natural Language Processing and Information Retrieval audiences. It provides a comprehensive survey of the neural approaches to conversational AI that have been developed in the last few years, covering QA, task-oriented and social bots with a unified view of optimal decision making. The authors draw connections between modern neural approaches and traditional approaches, allowing readers to better understand why and how the research has evolved and to shed light on how they can move forward. They also present state-of-the-art approaches to training dialogue agents using both supervised and reinforcement learning. Finally, the authors sketch out the landscape of conversational systems developed in the research community and released in industry, demonstrating via case studies the progress that has been made and the challenges that are still being faced. *Neural Approaches to Conversational AI* is a valuable resource for students, researchers, and software developers. It provides a unified view, as well as a detailed presentation of the important ideas and insights needed to understand and create modern dialogue agents that will be instrumental to making world knowledge and services accessible

to millions of users in ways that seem natural and intuitive.

This book provides a comprehensive and self-contained introduction to federated learning, ranging from the basic knowledge and theories to various key applications. Privacy and incentive issues are the focus of this book. It is timely as federated learning is becoming popular after the release of the General Data Protection Regulation (GDPR). Since federated learning aims to enable a machine model to be collaboratively trained without each party exposing private data to others. This setting adheres to regulatory requirements of data privacy protection such as GDPR. This book contains three main parts. Firstly, it introduces different privacy-preserving methods for protecting a federated learning model against different types of attacks such as data leakage and/or data poisoning. Secondly, the book presents incentive mechanisms which aim to encourage individuals to participate in the federated learning ecosystems. Last but not least, this book also describes how federated learning can be applied in industry and business to address data silo and privacy-preserving problems. The book is intended for readers from both the academia and the industry, who would like to learn about federated learning, practice its implementation, and apply it in their own business. Readers are expected to have some basic understanding of linear algebra, calculus, and neural network. Additionally, domain knowledge in FinTech and marketing would be helpful."

An in-depth description of the state-of-the-art of 3D shape analysis techniques and their applications This book discusses the different topics that come under the title of "3D shape analysis". It covers the theoretical foundations and the major solutions that have been presented in the literature. It also establishes links between solutions proposed by different communities that studied 3D shape, such as mathematics and statistics, medical imaging,

computer vision, and computer graphics. The first part of *3D Shape Analysis: Fundamentals, Theory, and Applications* provides a review of the background concepts such as methods for the acquisition and representation of 3D geometries, and the fundamentals of geometry and topology. It specifically covers stereo matching, structured light, and intrinsic vs. extrinsic properties of shape. Parts 2 and 3 present a range of mathematical and algorithmic tools (which are used for e.g., global descriptors, keypoint detectors, local feature descriptors, and algorithms) that are commonly used for the detection, registration, recognition, classification, and retrieval of 3D objects. Both also place strong emphasis on recent techniques motivated by the spread of commodity devices for 3D acquisition. Part 4 demonstrates the use of these techniques in a selection of 3D shape analysis applications. It covers 3D face recognition, object recognition in 3D scenes, and 3D shape retrieval. It also discusses examples of semantic applications and cross domain 3D retrieval, i.e. how to retrieve 3D models using various types of modalities, e.g. sketches and/or images. The book concludes with a summary of the main ideas and discussions of the future trends. *3D Shape Analysis: Fundamentals, Theory, and Applications* is an excellent reference for graduate students, researchers, and professionals in different fields of mathematics, computer science, and engineering. It is also ideal for courses in computer vision and computer graphics, as well as for those seeking 3D industrial/commercial solutions.

The majority of natural language processing (NLP) is English language processing, and while there is good language technology support for (standard varieties of) English, support for Albanian, Burmese, or Cebuano—and most other languages—remains limited. Being able to bridge this digital divide is important for scientific and democratic reasons but also represents an enormous growth potential. A key challenge for this to happen is learning to align basic meaning-bearing units of different languages. In this book, the authors survey and discuss recent and historical work on supervised and unsupervised

learning of such alignments. Specifically, the book focuses on so-called cross-lingual word embeddings. The survey is intended to be systematic, using consistent notation and putting the available methods on comparable form, making it easy to compare wildly different approaches. In so doing, the authors establish previously unreported relations between these methods and are able to present a fast-growing literature in a very compact way.

Furthermore, the authors discuss how best to evaluate cross-lingual word embedding methods and survey the resources available for students and researchers interested in this topic.

A learner-centred teaching orientation begins with the premise that the learner is the central reference point in decision making because: - needs analysis and goal-setting can be more effective if students inform them with their own knowledge and experience; - learning is more successful if methodology and study mode take into account student preferences and characteristics. This book provides a framework of theory, discussion and practical guidelines to help teachers implement these principles in a sensitive and flexible manner in response to the specific features both of their students and of the wider context of learning. The book also examines the implications a learner-centred approach has in terms of the role and responsibilities of the teacher.

Document from the year 2016 in the subject English - Pedagogy, Didactics, Literature Studies, grade: 91.1, , language: English,

abstract: This study aims at investigating the potential differences in employing different linguistic knowledge sources by adult male Jordanian English speakers. To this end, a lexical inferring test was used to instigate any previously acquired knowledge in morphology, phonology, syntax and semantics by 16 Jordanians. Data was then analyzed statistically and categorized according to the employed linguistic knowledge sources. Results showed that participants generally tended to use a single linguistic knowledge source at a time. They relied more heavily and successfully on their previous knowledge in semantics followed by morphological analysis, whereas reliance on syntax was least used, followed by dependence on phonological relationships which was the most misleading. Differences appeared in terms of the frequency of using each linguistic knowledge source as well as the success of making use of each source. Differences can be ascribed to variance in length of individual's previous English learning experience and time given to formal instruction on applying their knowledge to reading-based lexical learning tasks. The study highlights the importance of knowledge in linguistics as a prerequisite to support cognitive processing, to overcome limited lexical knowledge and to facilitate lexical acquisition. The study has implications for lexical studies and second language acquisition.
