In this latest addition to the War & Conflict Through the Ages series, Brian Sandberg offers a truly global examination of the intersections between war, culture, and society in the early modern period. He traces the innovative military technologies and practices that emerged around 1500, exploring the different forms of warfare including dynastic war, religious warfare, raiding warfare, and peasant revolt that shaped conflicts during the sixteenth and seventeenth centuries. He explains how significant social, economic, and political developments transformed warfare on land and at sea at a time of global imperialism and growing mercantilism, forcing states and military systems to respond to rapidly changing situations. Engaging and insightful, *War and Conflict in the Early Modern World* will appeal to scholars and students of world history, the early modern period, and those interested in the broader relationship between war and society.

Scholars have long argued over whether the 1648 Peace of Westphalia, which ended more than a century of religious conflict arising from the Protestant Reformations, inaugurated the modern sovereign-state system. But they largely ignore a more fundamental question: why did the emergence of new forms of religious heterodoxy during the Reformations spark such violent upheaval and nearly topple the old political order? In this book, Daniel Nexon demonstrates that the answer lies in understanding how the mobilization of transnational religious movements intersects with—and can destabilize—imperial forms of rule. Taking a fresh look at the pivotal events of the sixteenth and seventeenth centuries—including the Schmalkaldic War, the Dutch Revolt, and the Thirty Years' War—Nexon argues that early modern "composite" political communities had more in common with empires than with modern states, and introduces a theory of imperial dynamics that explains how religious movements altered Europe's balance of power. He shows how the Reformations gave rise to crosscutting religious networks that undermined the ability of early modern European rulers to divide and contain local resistance to their authority. In doing so, the Reformations produced a series of crises in the European order and crippled the Habsburg bid for hegemony. Nexon's account of these processes provides a theoretical and analytic framework that not only challenges the way international relations scholars think about state formation and international change, but enables us to better understand global politics today.

Trade and Civilisation Routledge

"The sixteenth century in Europe was a period of vigorous economic expansion that led to social, political, religious, and cultural transformations and established the early modern age. This resource explores the emergence of monarchical nation-states and early Western capitalism during this period. Also examined in depth are the Protestant Reformation and the Counter-Reformation, which exacerbated tensions between states and contributed to the Thirty Years' War (1618-1648). Readers will come to understand how these events developed, how they led to the age of exploration, and how they inform modern European history."

From large-scale cattle farming to water pollution, meat— more than any other food—has had an

enormous impact on our environment. Historically, Americans have been among the most avid meat-eaters in the world, but long before that meat was not even considered a key ingredient in most civilizations' diets. Labor historian Wilson Warren, who has studied the meat industry for more than a decade, provides this global history of meat to help us understand how it entered the daily diet, and at what costs and benefits to society. Spanning from the nineteenth century to current and future trends, Warren walks us through the economic theory of food, the discovery of protein, the Japanese eugenics debate around meat, and the environmental impact of livestock, among other topics. Through his comprehensive, multifaceted research, he provides readers with the political, economic, social, and cultural factors behind meat consumption over the last two centuries. With a special focus on East Asia, *Meat Makes People Powerful* reveals how national governments regulated and oversaw meat production, helping transform virtually vegetarian cultures into major meat consumers at record speed. As more and more Americans pay attention to the sources of the meat they consume, Warren's compelling study will help them not only better understand the industry, but also make more informed personal choices. Providing an international perspective that will appeal to scholars and nutritionists alike, this timely examination will forever change the way you see the food on your plate.

Corruption, Empire and Colonialism in the Modern Era McGraw-Hill/Dushkin

This account of developments in the modern era begins with the European Renaissance, and traces developments across the centuries of empire, industrial innovation, revolutions and world wars, through to the emergence of a fast-changing, inter-connected and non-Eurocentric world beset with environmental concerns.

Economic Networks and Cultural Ties, from Prehistory to the Early Modern Era Springer Nature

A pioneering examination of the three-dimensionality of the earth from the perspective of history and the humanities. This book considers the variegated world of mountains and their development during the last 500 years. It takes as its starting point the United Nations environmental conference of 1992 in Rio de Janeiro, where the mountains were officially recognised as a topic of the world community. Important precedents for this new agenda were built in the early modern period and in the nineteenth century, as European societies began to exceed their traditional limitations. The book begins with an investigation of this long-term process with respect to science, culture and politics, each of which has transformed our attitudes toward mountainous regions. It then takes up historical problems that have been debated in the latest research, placing them in a comparative framework. At the book's heart stands the question of whether and in what way the 'three-dimensional history' of mountain people may reveal distinctive forms of development.

The Modern World McGraw-Hill/Glencoe

Every society throughout history has defined what counts as work and what doesn't. And more often than not, those lines of demarcation are inextricable from considerations of gender. *What Is Work?* offers a multi-disciplinary approach to understanding labor within the highly gendered realm of household economies. Drawing from scholarship on gender history, economic sociology, family history, civil law, and feminist economics, these essays explore the changing and often contested boundaries between what was and is considered work in different Euro-American contexts over several centuries, with an eye to the ambiguities and biases that have shaped mainstream conceptions of work across all social sectors.

The industrial revolution was the single most important development in human history over the past three centuries, and it continues to shape the contemporary world. With new methods and organizations for producing goods, industrialization altered where people live, how they play, and even how they define political issues. By exploring the ways the industrial revolution reshaped world history, this book offers a unique look into the international factors that started the industrial

revolution and its global spread and impact. In the fourth edition, noted historian Peter N. Stearns continues his global analysis of the industrial revolution with new discussions of industrialization outside of the West, including the study of India, the Middle East, and China. In addition, an expanded conclusion contains an examination of the changing contexts of industrialization. The Industrial Revolution in World History is essential for students of world history and economics, as well as for those seeking to know more about the global implications of what is arguably the defining socioeconomic event of modern times.

 Anticorruption in History is a timely and urgent book: corruption is widely seen today as a major problem we face as a global society, undermining trust in government and financial institutions, economic efficiency, the principle of equality before the law and human wellbeing in general. Corruption, in short, is a major hurdle on the "path to Denmark" a feted blueprint for stable and successful statebuilding. The resonance of this view explains why efforts to promote anticorruption policies have proliferated in recent years. But while the subject of corruption and anticorruption has captured the attention of politicians, scholars, NGOs and the global media, scant attention has been paid to the link between corruption and the change of anticorruption policies over time and place, with the attendant diversity in how to define, identify and address corruption. Economists, political scientists and policy-makers in particular have been generally content with tracing the differences between low-corruption and high-corruption countries in the present and enshrining them in all manner of rankings and indices. The long-term trends - social, political, economic, cultural - potentially undergirding the position of various countries plays a very small role. Such a historical approach could help explain major moments of change in the past as well as reasons for the success and failure of specific anticorruption policies and their relation to a country's image (of itself or as construed from outside) as being more or less corrupt. It is precisely this scholarly lacuna that the present volume intends to begin to fill. The book addresses a wide range of historical contexts: Ancient Greece and Rome, Medieval Eurasia, Italy, France, Great Britain and Portugal as well as studies on anticorruption in the Early Modern and Modern era in Romania, the Ottoman Empire, the Netherlands, Germany, Denmark, Sweden and the former German Democratic Republic.

This volume presents a global narrative of the origins of the modern world. Unlike most studies, which assume that the rise of the West is the story of the coming of the modern world, this history accords importance to the 'underdeveloped world'.

This is the second, amended and enlarged edition of a familiar standard work, first published in 1958. Like its predecessor, it describes the open conflicts of the Reformation from Luther's first challenge to the uneasy peace of the 1560s. Reforming movements in all the principal countries are discussed against the background of constitutional development and the political struggles of the ruling dynasties. Europe's relations with the outside world are given due prominence. The second edition incorporates the results of some thirty years of further research and fills some of the gaps, especially in the history of central Europe, which beset the first edition. All chapters that remain from 1958 have been revised, some very substantially, while other contributions are wholly new. The only other volume of *The New Cambridge History* planned to appear in a second edition is Volume I: *The Renaissance* scheduled for 1991.

War and Conflict in the Early Modern World Oxford University Press

This presents a major re-evaluation of the standard view of revolutionary armies, the range of attitudes towards the role of heroic individuals, the formation and leadership of armies, and the differences and similarities between such armies. Beginning with an exploration of the New Model Army of the 1640s, a force whose name itself seems to denote its revolutionary credentials, the author presents ten case studies from around the globe, including the American War of Independence, The French Revolution, The Zulu-Boer War, the Waffen SS and the Viet-Cong. Through a detailed analysis of source material, he examines the images connected with these armies, both historical and recent, and assesses these images in their socio-political and nationalist contexts.
