Fire-Resistant Geopolymers Role of Fibres and Fillers to Enhance Thermal Properties Fire-Resistant Geopolymers eBook by Les Vickers ... Most polymers decompose by either an unzipping or a random chain scission mechanism with an endothermic decomposition of 100- 900 J/g. Aromatic or heteroaromatic rings, conjugated double or triple bonds, and heteroatoms such as halogens, N, O, S, P, and Si, are the basic structural units for fire-

resistant polymers. DOT/FAA/AR-04/11 Fire-Safe Polymers and Polymer Composites Fire Resistance of OPC and Geopolymers. Abstract. Geopolymer based systems have inherently superior fire resistance compared to Portland cement based and organic polymer systems. Geopolymer systems are substantially inorganic based and are considered incombustible, emitting no toxic fumes when exposed to fire. Fire Resistance of OPC and Geopolymers | SpringerLink Fire-safe polymers are polymers that are resistant to degradation at high temperatures. There is need for fire-resistant polymers in the construction of small, enclosed spaces such as skyscrapers, boats, and airplane cabins. In these tight spaces, ability to escape in the event of a fire is compromised, increasing fire risk.
