How to Power Tune Mini on a Small Budget Motorbooks International

The automobile seems to be as popular now as it ever was. Posters of cars still adorn many a child's bedroom wall, and school exercise books are full of doodles of cars. This book takes those notebook sketches and teaches you how to develop them into the car designs you see in magazines. Using simple to follow step-by-step drawings it guides you from pencil sketch to marker rendering, from doodle to highly visual computer generated artwork. Adrian Dewey has worked on designs as diverse as small sports cars to double decker buses, modified motors to concept Formula 1 cars, using various techniques and styles. In this book, he uses his knowledge of the different styles to guide the reader in creating great artwork and designs of their own. The book shows in detail how to use different materials and how to get the most out of each one, whether it be a great pencil sketch or a photo realistic vector illustration. The book also features an easy to follow index for quick reference on different types of drawing.

From the 1940s to the 1960s, the microcar posed a challenge to the large companies that mass-produced cars to uniform designs. The microcar was the opposite, produced by small entrepreneurial start-ups using quirky design concepts that

offered motorists cheaper and more economical vehicles. This book is a beautifully illustrated history of the British microcar, from the early days of Bond and Reliant to the proliferation of micro marques during the 1950s and their demise during the 1960s. It explores many eccentric British concepts, comparing the cars to their influential European competitors, examining the social and economic reasons for the decline and disappearance of the microcar, but also saluting the signs of a microcar renaissance in the twenty-first century, this time from mainstream manufacturers.

Runways and Racers concentrates on the short transitional period, 1952-1954, for sports car racing in America following the ban on public road racing in many of the States. The ban left the rapidly expanding Sports Car Club of America with a problem: where to hold races. At precisely the same time, Curtis LeMay, head of Strategic Air Command, was having problems obtaining funds from Congress to improve conditions on the many air bases located around the country. The solution was a marriage of convenience, whereby the SCCA was allowed access to active SAC air bases to hold its race programmes. In return, the SAC base would receive the net profits from the event, which would be put into the Airmen's Living Improvement Fund. As a result of some initial financial success for the SAC bases, the scheme was also adopted by non-SAC bases together with regional clubs, with the same agreement in place. Complaints from airmen alerted Congressman Errett Scrivner to potential irregularities, and he ordered an audit to be conducted to ascertain precisely what it was costing the air bases to host the races. His findings led to the cessation of the races, ordered by Congress. The product of a long period of extensive research by the author, this book gives a fascinating insight into this two-year period, complemented by over 150 period pictures, many previously unpublished.

In 1965, Colin Chapman persuaded Ford to underwrite development of a V8 for the new 3000cc Grand Prix formula. Built by Cosworth, the new DFV engine won Lotus four World

Championship Grands Prix in 1967. A year later, and now available to other constructors, the engine began its domination of Grand Prix racing.

This text charts the production of the Leningrad L-1 of 1931/32 up to the final examples produced in 2003. Featuring full specifications translated from the relevant primary sources in Russian and Chinese literature, this is a meticulous and unique account of Soviet limousines from 1930 to 2003.

The A-Z of popular Scooters & Microcars Veloce Publishing Ltd

This book is a trip down memory lane, recalling the days when Formula 5000 cars roared around the race tracks in Britain and Europe, creating a lot of noise and, occasionally, dust. The wail of a 5-litre engine was often more spine-tingling than ANY other racing car! Nowadays, many of the same cars show modern day spectators just what Formula 5000 was, back in the day. Few, if any, of the drivers are prima-donnas and many want to know what their car did before it came into their possession. This book answers those questions and many more.

The unique points system will help you to place the car's value in relation to condition, while extensive photographs illustrate the problems to look out for. This is an important investment - don't buy a Mini without this book's help.

The Big Book of Tiny Cars Gale Cengage

After the Second World War, Japanese toy makers made tinplate replicas of many American and European cars, often reaching surprising heights of realism. Today, these tin cars are the most desirable of all vintage toys, fetching prices at auction in excess of diecast cars such as Dinky Toys. Seeking out the finest examples of these toys has been a lifelong passion for Bruce Sterling of New York, who has allowed his collection to be pictured in this volume. 150 of the rarest and best toys are shown, all of them in pristine condition with their original boxes. Cadillac, Chevrolet, Buick, Packard and many other famous American names are represented, in addition to a good selection of European vehicles. All the toys are described in detail, and background information is provided about the prototypes on which they are based. A guide to current values is also given. This

is a book that will be treasured, not only by specialist collectors, but by all who are passionate about vintage toys and classic vehicles.

Expert practical advice from an experienced race engine builder on how to build an ignition system that delivers maximum power reliably. A lot is talked about ignition systems and there is a bewildering choice of expensive aftermarket parts, which all claim to deliver more power. Des Hammill cuts through the myth and hyperbole and tells readers what really works, so that they can build an excellent system without wasting money on parts and systems that simply don't deliver. Ignition timing and advance curves for modified engines is another minefield for the inexperienced, but Des uses his expert knowledge to tell readers how to optimize the ignition timing of any high-performance engine.

This book focuses solely on the cars derived from the classic Mini.

Small GTs, sports cars, roadsters and fun cars: Mini-derivatives that changed the specialist motoring market completely in the early sixties, and new designs kept it busy for nearly four decades. From the well known Mini Marcos and Unipower GT that raced at Le Mans, to the very obscure but as exciting Coldwell GT or Sarcon Scarab, almost 60 cars are thoroughly researched, described and photographed in this book.

The Escort RS Cosworth, which started rallying in 1993, was one of the most ingenious designs of all time, and eventually became Ford's most successful since the legendary Escorts of the 1970s. Because it was smaller, lighter, and more nimble than any of the Sierras, the combination of Cosworth power, four-wheel-drive transmission, and an effective aerodynamic package made it a Rally Giant in all conditions. With five World victories in its first season, and success all around the world in later years, it was seen in every continent, in all conditions. To meet a change in regulations, the Escort World Rally Car took over in 1997, and also enjoyed years of success.

There has been nothing published outside of Russia concerning the activities of its motor industry, by 1937 the Soviets had become the largest producers of motor vehicles in Europe, albeit with the help of Henry Ford. The author decided to concentrate on the work of the pioneers in Czarist Russia, for their efforts were more diverse than those of their counterparts in the Soviet era. However, one Soviet motor car which was an indigenous product has been included to illustrate how the industry might have evolved if Henry Ford had not been approached. This is a comprehensive overview of all facets of vehicle production from the early days to the final demise of the Soviet Union. All the manufacturers of motor vehicles, certain accessories, military machines, and even aero engines are recorded in this unique book.
