The sports film has
become one of
commercial cinema's
most recognizable genres.
From classic boxing films

such as Raging Bull
(1980) to soccer-themed
box-office successes like
Bend it Like Beckham
(2002), the sports film
stands at the interface of
two of our most important
cultural forms. This book
examines the social,
historical and ideological
significance of
representations of sport in
film internationally, an
essential guide for all

students and enthusiasts
of sport, film, media and
culture. Sport and Film
traces the history of the
sports film, from the
beginnings of cinema in
the 1890s, its
consolidation as a distinct
fiction genre in the mid
1920s in Hollywood films
such as Harold Lloyd's
The Freshman (1925), to
its contemporary
manifestation in Oscar-

winning films such as *Million Dollar Baby* (2004) and *The Fighter* (2010). Drawing on an extensive range of films as source material, the book explores key issues in the study of sport, film and wider society, including race, social class, gender and the legacy of 9/11. It also offers an invaluable guide to 'reading' a film, to help students fully engage with their source material. Comprehensive, authoritative and accessible, this book is an important addition to the literature in both film and

media studies, sport studies and cultural studies more generally. *Statistics* Rowman & Littlefield
 A textbook treatment of the same psychological problems addressed by self-help books. Weiten (psychology, Santa Clara U.) and Lloyd (psychology, Georgia Southern U.) argue that accurate knowledge of the principles of psychology can help people with adjustment, which they define as the process by which one manages the stresses of everyday life.

The material is organized into sections on the dynamics of adjustment, the interpersonal realm, developmental transitions, and mental and physical health. Annotation copyrighted by Book News, Inc., Portland, OR

This Physical Geology textbook uses cutting edge research to guide the creation of carefully structured pages that cover topics commonly taught in introductory physical geology courses. The book is focused around images and emphasizes the key

concepts. Research (e.g. Mayer, 2003) indicates that students learn more deeply: - when extraneous material is excluded rather than included, - from words and pictures than from words alone, - when printed words are placed near rather than far from corresponding pictures, and - when words are presented in conversational rather than formal style. Most traditional geoscience textbooks do not address this research. Although geoscience textbooks are image-rich, the text is

often separate from figures, generally with a note in the text referring the student to look at the image. Research indicates that many students just glance at the images or ignore them altogether, resulting in a less productive learning experience than intended by the authors. Also, most textbooks, even "essentials" versions, tend to have more information than an introductory student can learn in a semester, and the students, therefore, have a difficult time distilling

the key concepts from the details. Images play an integral role in the textbook. There are no long blocks of text to read, but, instead, most information is presented incorporated in or around figures. Students therefore examine the images, integrating text and figures, which results in a deeper learning experience. Concepts are represented in multiple ways (photographs, written descriptions, detailed drawings, sketches, graphs, analogies, etc.) to

maximize student learning. Because research indicates that students have a difficult time pulling out the key points from images, many of the images in this book are simple, without too many realistic-but-distracting details. Many of the photographs are accompanied by a simplified sketch of the same area illustrating the important geological features shown. The process of comparing two images presenting the same information in different ways (e.g. a

photograph and a sketch) directs students to observe the important features and requires students to integrate those two images, strengthening their learning. Simple language is used when writing, and non-essential vocabulary words are omitted, so students will not focus on memorizing definitions without understanding the concepts. The book has a more conversational style than many current textbooks. This textbook presents the key concepts in geoscience without

additional distracting details. As a result, this book is shorter than other books currently on the market. The concise nature of the book encourages students to read it. Because it emphasizes the key concepts, students have a better understanding of the fundamentals and will come to class more prepared. Therefore, instructors will be able to cover additional information in class, because the fundamentals are already understood by the students. The themes

in the book are plate tectonics, water cycle, rock cycle and how geology and people affect each other. These are concepts that are key in understanding geology and learning why it is relevant in today's society. These three themes are emphasized, and individual topics are related back to the overarching themes. *Intermediate Algebra* Addison Wesley Rev. ed. of: Mathematics in our world / Allan G. Michael Sullivan's *Statistics: Informed Decisions Using Data*, Fourth Edition, connects statistical concepts to students' lives, helping them to think critically, become informed consumers, and make better decisions. Throughout the book,

"Putting It Together" features help students visualize the relationships among various statistical concepts. This feature extends to the exercises, providing a consistent vision of the bigger picture of statistics. This book follows the *Guidelines for Assessment and Instruction in Statistics Education (GAISE)*, as recommended by the American Statistical Association, and emphasizes statistical literacy, use of real data and technology, conceptual

understanding, and active learning.

Framed by historic developments--from the Open Admissions movement of the 1960s and 1970s to the attacks on remediation that intensified in the 1990s and beyond--BASIC WRITING traces the arc of these large social and cultural forces as they have shaped and reshaped the field. GEORGE OTTE and REBECCA WILLIAMS MLYNARCZYK balance fidelity to the past with present relevance, local concerns with

(presumptively) global knowledge, personal judgment with (apparent) objectivity. BASIC WRITING circles back on the same general story, looking for different themes or seeing the same themes from different perspectives. What emerges is a gestalt of Basic Writing that will give readers interested in its history, self-definition, pedagogy, or research a sense of the important trends and patterns. Otte and Mlynarczyk make research trajectories clear without oversimplifying

them or denying the undeniable blurring, dissensus, and differential development that characterizes the field. GEORGE OTTE is a member of the doctoral faculty at the CUNY Graduate Center in the PhD Programs in English, Urban Education, and Interactive Technology and Pedagogy. He served as coeditor of the JOURNAL OF BASIC WRITING from 1996 to 2002. He is the coauthor with Nondita Mason of WRITERS' ROLES: ENACTMENTS OF THE

PROCESS (Harcourt, 1994) and, with Linda Palumbo, of CASTS OF THOUGHT: WRITING IN AND AGAINST TRADITION (Macmillan, 1990). REBECCA WILLIAMS MLYNARCZYK has taught basic writing at the City University of New York since 1974. She is currently professor of English at the CUNY Graduate Center and Kingsborough Community College, where she codirects the ESL program. She is the author of CONVERSATIONS OF THE MIND: THE USES OF

JOURNAL WRITING FOR SECOND-LANGUAGE LEARNERS (Erlbaum) and the coauthor, with Steven Haber, of IN OUR OWN WORDS: STUDENT WRITERS AT WORK (Cambridge). It offers a smooth integration of Microvita (units of consciousness) into a well-grounded scientific scenario, consistent with the equations of Newton, Maxwell, Einstein, and

Schrödinger. It also provides a link between the worlds of perception and conception and implies that the distinct disciplines of physics, biology, psychology, and mathematics can be merged into one science of everything. So what has Dr. Rudolph done? To explain the mind-body problem, he has structured a universal grid, consisting of the cognitive and operative aspects of the supreme causal factor. Its lattice width is in the range of Planck length and can

release 2x2 matrices of primary matter as well as complex 4x4 matrices, which contain the key qualities of elementary particles. Then, by means of a modified positive or negative creation operator, particles can be produced, which contain imaginary representations of the opposite qualities, thereby modeling the phenomenon of quantum entanglement - an approach that provides the basis of our universal interconnectedness. Let us now enter the arena of human propensities and

self-realization, which is of prime concern to all of us: Dr. Rudolph postulates that neuronal assemblies are quantum objects, susceptible to a Quantum Zeno-like effect. Their electrical activities are transient and unstable, but can be stabilized by the production and annihilation of quasiparticles at defined frequencies (ν) and durations (t), which is, in turn, controlled by sets of synchronized Microvita. In this context, three levels of Microvita are to be distinguished: biological,

psychological, and spiritual. Energization of the chakras in meditation can stimulate Microvita to cause biological regeneration and disease curing as well as to attain higher consciousness attributes. Then, ideating on and illuminating the mind with cosmic consciousness can attract spiritual Microvita to help rejuvenate the mind by dissolving its embedded psychic impressions, leading to self-realization. Thus it can be seen that Microvita have a distinctive role in guiding

our life journey towards its cosmic abode. I greatly complement Dr. Rudolph for this book, which will hopefully invoke the interest of many independent minds to explore and discover the new science of Microvita. [Calculus with Applications](#)
