Judicial ethics is a surprisingly underexplored area and this volume marks an important point in this relatively new but commendably growing field of studies. The areas covered range from the metaethics of decision and how this impacts the judiciary to the ethical evaluation of the substance and procedure of a decision and codes of judicial conduct. Addressing each of these meanings and more, this collection brings together for the first time many, if not most, of the 'canons' (or soon-to-be 'canons') of modern judicial ethics scholarship. The previously published articles have created new interdisciplinary, historical, cultural and doctrinal understandings of judicial character, conduct, regulation and development, and bringing them together in one volume provides readers with the opportunity to review the field more readily and comprehensively.

This book focuses on value addition to various waste streams, which include industrial waste, agricultural waste, and municipal solid and liquid waste. It addresses the utilization of waste to generate valuable products such as electricity, fuel, fertilizers, and chemicals, while placing special emphasis on environmental concerns and presenting a multidisciplinary approach for handling waste. Including chapters authored by prominent national and international experts, the book will be of interest to researchers, professionals and policymakers alike.

Handbook of Materials Failure Analysis: With Case Studies from the Construction Industry provides a thorough understanding of the reasons materials fail in certain situations, covering important scenarios including material defects, mechanical failure due to various causes, and improper material selection and/or corrosive environment. The book begins with a general overview of materials failure analysis and its importance, and then logically proceeds from a discussion of the failure analysis process, types of failure analysis, and specific tools and techniques, to chapters on analysis of materials failure from various causes. Failure can occur for several reasons, including: materials defects-related failure, materials design-related failure, or corrosion-related failures. The

suitability of the materials to work in a definite environment is an important issue. The results of these failures can be catastrophic in the worst case scenarios, causing loss of life. This important reference covers the most common types of materials failure, and provides possible solutions.

Provides the most up-to-date and balanced coverage of failure analysis, combining foundational knowledge and current research on the latest developments and innovations in the field Offers an ideal accompaniment for those interested in materials forensic investigation, failure of materials, static failure analysis, dynamic failure analysis, and fatigue life prediction Presents compelling new case studies from key industries to demonstrate concepts and to assist users in avoiding costly errors that could result in catastrophic events

**Sustainable Cities, Human Mobility and International Migration** Springer

"It is clear that one of the most damaging global problems is hunger. There is still a high proportion of hungry people in the world, the number of human beings in this condition exceeding 690 million, according to the latest State of Food Security and Nutrition in the World Report (FAO 2020).

Consequently, its eradication is extremely urgent. Nevertheless, it does not appear that Sustainable Development Goal number two, i.e. Zero Hunger, will be achieved by 2030. The United Nations itself admits this, stating that "the world is not on track to achieve Zero Hunger by 2030. If recent trends continue, the number of people affected by hunger would surpass 840 million by 2030". The problems facing food in the world today have increased considerably, as well as various factors and phenomena that augment the complexity of the issues or situations that fall within the scope of food security, such as: climate change, land grabbing, use of chemical fertilizers, loss of agrodiversity and other agricultural sustainability issues, obesity problems resulting from unhealthy diets, the impact of the coronavirus pandemic, the lack of justiciability of the right to food, the use of biotechnology in food, etc. In short, this book is a diverse compilation of the new manifestations of global food security seen from several angles and areas. The book aims to let visualize the main global problems and challenges that have a negative impact on food security, with the underlying objective of highlighting the need for reinforcing its full application in all contexts and countries. To this end, we believe that it is necessary to make its concept operational, and take it into consideration when applying policies and standards, especially in those areas and matters that may undermine said food security. In this sense, it is essential to strengthen its legal protection through a coherent and operational interpretation of the human right to food, so as to broaden its content and make it consistent with its pillars and foundations"--

Everyone knows that you are supposed to "follow your dream." But where is the road map to help you discover what that dream is? You have just found it. In *Springboard*, award-winning author and

teacher G. Richard Shell helps you find your future. His advice: Take an honest look inside and then answer two questions: What, for me, is success? How will I achieve it? You will begin by assessing your current beliefs about success, including the hidden influences of family, media, and culture. These are where the pressures to live "someone else's life" come from. Once you gain perspective on these outside forces, you will be ready to look inside at your unique combination of passions and capabilities. The goal: to focus more on what gives meaning and excitement to your life and less on what you are "supposed" to want. Drawing on his decades of research, Shell offers personalized assessments to help you probe your past, imagine your future, and measure your strengths. He then combines these with the latest scientific insights on everything from self-confidence and happiness to relationships and careers. Throughout, he shares inspiring examples of people who found what they were meant to do by embracing their own true measure of success. Eric Adler: one of Shell's former students who walked away from a conventional business career to help launch a revolutionary new concept in public education that has placed hundreds of inner-city high school students in top colleges. Kurt Timken: a Harvard-educated son of a Fortune 500 CEO who found his true calling as a hard-charging police officer fighting drug lords in southern California. Cynthia Stafford: an office worker who became one of her community's leading promoters of theater and the arts. Get ready for the journey of a lifetime—one that will help you reevaluate your future and envision success on your own terms. Students and executives say that Richard Shell's courses have changed their lives. Let this book change yours.

This report reviews the current status of demographic evidence and its capacity to support monitoring of the Sustainable Development Goals (SDGs). It focuses on the core systems generating demographic data and describes how the "data revolution" has already improved their performance and the potential for accelerating such improvements. In addition, the report underscores that open access to anonymized microdata and routine use of geo-referencing in data collection are necessary to expand the use of demographic data. Geo-referencing makes possible the integration of diverse datasets and facilitates disaggregation and the incorporation of big data in analyses and modelling.

The therapeutic landscape concept, first introduced early in the 1990s, has been widely employed in health/medical geography and gaining momentum in various health-related disciplines. This is the first book published in several years, and provides an introduction to the concept and its applications. Written by health/medical geographers and anthropologists, it addresses contemporary applications in the natural and built environments; for special populations, such as substance abusers; and in health care sites, a new and evolving area - and provides an array of critiques or contestations of the concept and its various applications. The conclusion of the work provides a critical evaluation of the development and progress of the concept to date, signposting the likely avenues for future investigation.

This second edition of State of Implementation of the United Nations Convention against Corruption: Criminalization, Law Enforcement and International Cooperation, which was launched during the 7th session of the Conference of the States Parties (Vienna, 6-10 November 2017). The study is based on the findings and results emanating from the first cycle reviews of the implementation of the Convention by 156 States parties (2010-2015). It contains a comprehensive analysis of the

implementation of chapters III (Criminalization and law enforcement) and IV (International cooperation) of the Convention. More specifically, the study: (a) identifies and describes trends and patterns in the implementation of the above-mentioned chapters, focusing on systematic or, where possible, regional commonalities and variations; (b) highlights successes and good practices on the one hand, and challenges in implementation on the other; (c) provides an overview of the emerging understanding of the Convention and differences in the reviews, where they have been encountered.

Club Syndication How to Raise Money and Invest in Commercial Real Estate Like the Ultra-Wealthy There's a reason why ultra-wealthy have upwards of 25% of their net worth invested in cash flowing commercial real estate. Real estate is a durable, secure and tangible, hard asset. Professional commercial real estate investors dominate in three specific areas: they see the best properties first, they attract capital (both debt and equity) and they have experienced teams to manage and oversee the operations. For the average person looking to invest in commercial real estate, they quickly discover how capital-intensive it is. Then, they find it's difficult to find the quality assets to buy. Investing in commercial real estate is seldom taught to outsiders. It can take years working in the business to fully understand the moving parts and avoid the common pitfalls. Having expert local knowledge is key- but finding people you can trust for that information is not done on the internet or by calling a for sale or for lease sign. This is why the best commercial real estate is concentrated in the hands of a few ultra-wealthy investors or owned by large publicly traded companies. This is the reason I wrote this book. To help those who want to invest in commercial real estate, to do it like the ultra-wealthy. I help investors just like you find the best properties first. I give you to the tools and strategies needed to raise the money to purchase these assets, so you can start to invest like the wealthy. This is not a get rich quick gimmick. Investing in commercial real estate takes time, patience, money and a deep skill set. But, when done right, just one property can help set you up for financial independence. The biggest mistake I see most beginners in real estate make: they stay too small for too long because they think investing in commercial real estate is too risky. Or, they don't believe they have the knowledge to invest in commercial real estate. But when you see how the ultra-wealthy invest in what I call "Club Syndications" you'll see how it's possible for the average person to. Club Syndication: "is a small group of people that pool their money to purchase larger commercial real estate properties". Generally, one person in the group has commercial real estate experience and knowledge, finds the best properties and in exchange, is paid a fee and receives a % ownership in the property. This book will explain the skills needed to find the properties and raise the capital needed to set up your own Club Syndication and become a professional commercial real estate investor.
