As this book explains, the Japanese did not suddenly become proficient in the design and development of motorcycles when they first appeared in Europe at the end of the 1950s. Instead, the Japanese had been involved with motorcycles since the beginning of the 20th century. True, early Japanese motorcycles copied Western design - a trend that continued for several years after WWII. But soon they designed a succession of highly innovative machinery, not only to the Grand Prix world's benefit but to the paying 'over-the-counter' customer, too. Honda, Kawasaki, Suzuki, and Yamaha, plus Bridgestone and Tohatsu, have all built and sold racing motorcycles which the public could also buy and enjoy.

The early Hinckley Triumphs produced from 1991 to 2004 - Trophy, Daytona, Trident, Trident Sprint, Tiger, Speed Triple, Adventurer, Thunderbird - were designed and manufactured using a modular concept. This assists in the sharing of components across the range of bikes, which was useful with the restricted availability of spare parts. With over 725

colour photographs, this book provides helpful guidance on keeping your bike on the road, including a discussion of the models produced and their modular design; identifying common problems and how to address them. There is a comprehensive guide to maintenance, including the tools required and details of restoration, modification and upgrades, from changing the exhaust to fabricating swing arms. There is a useful list of suppliers for both new and reconditioned parts, as well as specialist service providers.
