Kerr examines St Thomas Aquinas's much-neglected proof for the existence of God in 'De Ente et Essentia', Chapter 4. He offers a contemporary presentation and interpretation of this proof as well as a defence. Beginning with the distinction between the key concepts of 'essence' and 'esse' in Aquinas's thought, the book moves from an account of these metaphysical principles to their use by Aquinas in establishing that there is a single unique primary cause from which all that is comes to be. Along the way, important themes in

metaphysics are examined from a Thomistic perspective.

SECTION I In 1972, Donald Davison and Gilbert Hannan wrote in the introduction to the volume Semantics of Natural Language: "The success of linguistics in treating natural languages as

formal syntactic systems has aroused the interest of a number of linguists in a parallel or related development of semantics. For the most part quite independently, many philosophers and logicians have recently been applying formal semantic methods to structures increasingly like natural languages. While differences in training, method and vocabulary tend to veil the fact, philosophers and linguists are converging, it seems, on a common set of interrelated problems. " Davidson and Harman called for an interdisciplinary dialogue of linguists, philosophers and logicians on the semantics of natural language, and during the last ten years such an enterprise has proved extremely fruitful. Thanks to the cooperative effort in these several fields, the last decade has brought about striking progress in our understanding of the semantics of natural language. This work on semantics has typically paid little attention to psychological aspects of meaning. Thus, psychologists or computer scientists working on artificial intelligence were not invited to join the forces in the influential

introduction of Semantics of Natural Language. No doubt it was felt that while psychological aspects of language are important in their own right, they are not relevant to our immediate semantic concerns. In the last few years, several linguists and logicians have come to question the fundamental anti-psychological assumptions underlying their theorizing.

Robert Smith's first book entitled *My Bunny Rabbit Adventures* features his father's repertoire of 1960s bedtime stories about the bunnies who lived in the woods next door. One of the bunnies from those original stories called Hector is featured in this subsequent book, which is a novel about Hector's life and times from the age of two when he first met Robert, the storyteller, to when his first child reaches this impressionable age. It therefore covers Hector's circle of life. You will discover how Hector grew up, what happened to him, what he became, how he coped with the good and bad things that came his way, what he learned from his experiences and from those of others, and finally, how he matured into a grown-up rabbit with a family of his own. The reader will learn about, and gain a better understanding of both their and other peoples'

feelings, challenges, and fears and how to deal with them and how to respect and treat others. The novel includes some interesting true stories and facts as part of the story line, which you may find interesting and useful and, hopefully, just utterly amazing too! This book is therefore an ideal first novel for children.

In almost all principled accounts of questions questions are related to the corresponding answers. Zellig Harris (Harris 1978:1), for example, maintains that" ... all interrogative sentences can be derived, by means of the independently established transformations of the language, from sentences which assert that someone is asking about a disjunction of statements which are the relevant possible answers to that interroga tive." This amounts to the claim that a yes-no question such as Will John stay? is derived from I ask you whether John will stay and a wh question such as Who came is derived from something like I ask you whether A came or B came or ... or X came .. Though in generative grammar interrogatives are not derived from the corresponding

declaratives, the semantic interpretation of questions is akin to the syntactic source of questions posited by Harris. Jerrold J. Katz and Paul M. Postal (Katz-Postal 1964:113-117) state a reading rule for Q, the interrogative constituent, which boils down to (1) in the case of yes-no questions and to (2) in the case of wh-questions. (1) Tell me which of the following is true: John will stay or John will not stay. (2) Tell me which of the following is true: A came or B came or ... or X came. Thus, the semantic interpretation of questions makes reference to the set of possible answers represented here by a disjunction of statements.
