Pamphlets on the Lumber Industry CRC Press

Even with today's mobile technology, most work is still undertaken in a physical workplace. Today's workplaces need to be healthy environments that minimize the risks of illnesses or injuries to occupants to compete in the marketplace. This necessitates the application of good ergonomics design principles to the creation of effective workplaces, and this is the focus of this book. This book will:

- Focus on ergonomic design for better health and ergonomic design for better productivity
- Presents environments that support new ways of working and alternative workplace strategies, as well as the impacts of new technologies
- Covers the role of ergonomics design in creating sustainable workplaces
- Includes ergonomics design for a wide variety of workplaces, from offices to hospitals, to hotels to vehicles, etc...
- Shows the design principles on how to design and create a healthy and productive workplace

The market lacks an ergonomics design book that covers the topics that this book will cover. This book summarizes design principles for practitioners, and applies them to the variety of workplace settings described in the book. No other book currently on the market does that.

Currently people deal with various entities (such as hardware, software, buildings, spaces, communities and other people), to meet specific goals while going about their everyday activities in work and leisure environments. These entities have become more and more complex and incorporate functions that hitherto had never been allocated such as automation, use in virtual environments, connectivity, personalization, mobility and friendliness. This book contributes to the analysis of human-system interactions from the perspective of ergonomics, regardless of how simple or complex they are, while incorporating the needs of users and workers in a healthy safe, efficient and enjoyable manner. This book provides a comprehensive review of the state of the art of current ergonomic in design methods and

techniques that are being applied to products, machinery, equipment, workstations and systems while taking new technologies and their applications into consideration. *Ergonomics in Design: Methods and Techniques* is organized into four sections and 30 chapters covering topics such as conceptual aspects of ergonomics in design, the knowledge of human characteristics applied to design, and the methodological aspects of design.

Examples are shown in several areas of design including, but not limited to, consumer products, games, transport, education, architecture, fashion, sustainability, biomechanics, intelligent systems, virtual reality, and neurodesign. This book will:

- Introduces the newest developments in social-cultural approaches
- Shows different ergonomics in design methodological approaches
- Divulges the ways that ergonomics can contribute to a successful design
- Applies different subjects to support the design including –ergonomics, engineering, architecture, urbanism, neuro, and product designs.

Presents recent technologies in ergonomic design, as applied to product design. With the contributions from a team of 75 researchers from 11 countries, the book covers the state-of-the-art of ergonomics in a way to produce better design.

Recent advancements in computer technology have allowed for designers to have direct control over the production process

through the help of computer-based tools, creating the possibility of a completely integrated design and manufacturing process. Over the last few decades, "artificial intelligence" (AI) techniques, such as machine learning and deep learning, have been topics of interest in computer-based design and manufacturing research fields. However, efforts to develop computer-based AI to handle big data in design and manufacturing have not yet been successful. This Special Issue aims to collect novel articles covering artificial intelligence-based design, manufacturing, and data-driven design. It will comprise academics, researchers, mechanical, manufacturing, production and industrial engineers and professionals related to engineering design and manufacturing.
