Those born since the digital revolution, seem to have the hardest time re-imagining the role of photography in the world today. Thinking of photography as a visual language is the approach this book adopts to address this challenge. Considering photography in this way develops the metaphor of 'learning a language' when attempting to explain what photography can be, and what it can give a student in transferable creative and life skills. This begins with challenging the pre-conception that successful photography is defined by the successful single image or 'the good photograph'. The book emphasises the central role of narrative and visual storytelling through a technique of 'photosketching' to develop the building blocks of visual creativity and ultimately to craft successful bodies of photographic work. New Ways of Seeing explains how to both learn and teach photography as a visual language, appropriate for both professionals and students working today.

The understanding of functional groups is the key to understanding organic chemistry. In the tradition of Patai's Chemistry of Functional Groups each volume treats all aspects of functional groups, touching on theoretical, analytical, biological, and industrial aspects. Hypervalent halogen compounds, in particular iodine compounds, are very efficient and selective oxidants which tolerate a wide range of functional groups. The electrophilic properties of these reagents can also be used to introduce other functionalizations. The present volume is the first in the series to survey the properties and chemical behaviour of hypervalent iodine and bromine, their use in organic synthesis, as well as their industrial application. As with all new volumes, the chapters are first published online in Patai's Chemistry of Functional Groups. Once a volume is completed online, it is then published in print format. The printed book offers the traditional quality of the Patai Book Series, complete with an extensive index.
