Painting and Publishing as Cultural Industries, 1580-1800 addresses how a small country like the Dutch Republic could become a major player in the creation of cultural goods during the Golden Age. On the basis of quantitative and qualitative sources from art history and book history, Claartje Rasterhoff traces the evolution of the painting and publishing industries from modest trades to booming industries. Informed by studies on cultural industries, she focuses on the role of industrial organization in shaping patterns of growth and innovation. Much like their present-day counterparts, early modern Dutch cultural industries were spatially concentrated, highly networked, and institutionally embedded. This distinct organizational structure helped to reduce uncertainty in the market and stimulated the commercial and creative potential of painters and publishers, for a century at least. Dutch painters and publishers had catered to their markets so rapidly and in such variety, that the exceptional levels of output, quality, and innovation accomplished during the first half of the seventeenth century could not be sustained. As producers came to face saturated domestic markets, they took to limiting risks and strengthening their distribution and marketing activities. By introducing the concepts of business cycles and spatial clusters, Rasterhoff offers a novel explanation

Written for teachers, trainers, and instructional designers -- anyone who is responsible for designing or preparing instruction -- this book begins with one basic premise: individual differences mediate learning at all levels and in all situations. That is, some learners find it easier or more difficult to learn some skills or to learn from certain forms of instruction because they vary in terms of aptitude, cognitive styles, personality, or learning styles. This volume describes most of the major differences in a readable and accessible way and demonstrates how to design various forms of instruction and predict the ease with which learners will acquire different skills. Most books that discuss any learner differences focus on those that characterize special education populations, whereas this book focuses on normal learners. Designed as a handbook, this volume is structured to provide easy and consistent access to information and answers, and prescriptions and hypotheses. When definitive answers are not possible because there is no research documentation, the authors suggest theories designed to stimulate future research.

This book identifies accumulated environmental, social and economic effects of oil and gas leasing, exploration, and production on Alaska's North Slope. Economic benefits to the region have been accompanied by effects of the roads, infrastructure and activities of oil and gas production on the terrain, plants, animals and peoples of the North Slope. While attempts by the oil industry and regulatory agencies have reduced many of the environmental effects, they have not been eliminated. The book makes recommendations for further environmental research related to environmental effects.

This book is an introduction-level text that reviews, discusses, and integrates both theoretical and practical corporate analysis and planning. The field can be divided into five parts: (1) Information and Methodology for Financial Analysis; (2) Alternative Finance Theories and Cost of Capital; (3) Capital Budgeting and Leasing Decisions; (4) Corporate Policies and their Interrelationships; (5) Financial Planning and Forecasting. The theories used and discussed in this book can be grouped into the following classical theoretical areas of corporate finance: (1) Pre-M&M Theory, (2) M&M Theory, (3) CAPM, and (4) Option Pricing Theory (OPT). The interrelationships among these theories are carefully analyzed. Real world examples are used to enrich the learning experience; and alternative planning and forecasting models are used to show how the interdisciplinary approach can be used to make meaningful financial-management decisions. In this third edition, we have extensively updated and expanded the topics of financial analysis, planning and forecasting. New chapters were added, and some chapters combined to present a holistic view of the subject and much of the data revised and updated.
