HARLEY CLARA

Fundamentals and Principles of
Ophthalmology, 1996-1997 Elsevier

Principles of Ophthalmology focuses on the anatomy, physiology, and diseases of the eyes. The book first offers information on the optical mechanism of the eyes, binocular vision, and examination of the eyes, including refractive errors, human binocular reflexes, and management of strabismus and heterophoria. The publication then examines the eyelids and lacrimal apparatus, exophthalmos and proptosis, and the conjunctiva. Topics include disorders of the lacrimal apparatus, abnormalities of the eyelids, lacrimal obstruction, orbital tumors, pseudotumor of the orbit, conjunctival involvement in skin diseases, and conjunctivitis. The text examines the cornea, sclera and episclera, lens, iris and ciliary body, and the vitreous body. Discussions focus on

vitreous opacities, cataract, anterior uveitis, sensitivity of organisms to antibiotics administrable by subconjunctival injection, and inflammatory lesions of the cornea. The publication is a valuable source of data for ophthalmologists and readers interested in ophthalmology. Amer Academy of Ophthalmology "Provides the essential scientific grounding for current ophthalmic practice. Discusses ocular anatomy, embryology, biochemistry and metabolism in the eye, and ocular pharmacology. Features genetics information, including an overview of appropriate uses for the latest genetic techniques. Includes an imaging chapter, Ophthalmic Radiology, which covers MRI and CT and ordering imaging studies."--

The "Veterinary Consult" version of this
title provides electronic access to the
complete content of this book.
"Veterinary Consult" allows you to
electronically search your entire book,
make notes, add highlights, and study
more efficiently. Purchasing additional
"Veterinary Consult" titles makes your
learning experience even more powerful.
All of the "Veterinary Consult" books will

work together on your electronic
'bookshelf', so that you can search
across your entire library of veterinary
books. "Veterinary Consult": It's the best
way to learn!

Academy of Ophthalmology
Ophthalmic Nursing provides an
overview for those just setting out in a
role within ophthalmic nursing. It

includes basic and comprehensible anatomy and physiology – the foundations for understanding how the eye functions and why and how problems occur – and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure guidelines and the inclusion of reflective activities in most chapters allows readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly and included new

colour images and diagrams. References, further reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the ‘go-to’ source for those caring for the ophthalmic patient.

2015-2016 Basic and Clinical Science Course, Section 02: Fundamentals and Principles of Ophthalmology Elsevier Health Sciences

Provides the essential scientific grounding for current ophthalmic practice. Discussions cover ocular anatomy, embryology, the biochemistry and metabolism of the eye and the latest developments in eye-related molecular and clinical genetics studies. Contains information about ocular

pharmacotherapeutics, updated drug information and a discussion of the legal aspects of medical therapy. CME Information The American Academy of Ophthalmology is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. The American Academy of Ophthalmology designates this enduring material for a maximum of 15 AMA PRA Category 1 Credits. Physicians should claim only the credit commensurate with the extent of their participation in the activity. Last major revision 2009-2010; 455 pages Section chair: K.V. Chalam, MD, PhD *Fundamentals and Principles of Ophthalmology, September-October, 1979* CRC Press Provides the essential scientific

grounding for current ophthalmic practice. It includes ocular anatomy, embryology, biochemistry, and pharmacology. Features substantive coverage of the latest advances in molecular genetics related to ophthalmology. Basic and Clinical Science Course, 2008-2009: Fundamentals and principles of ophthalmology Concise yet comprehensive, these texts serve as a convenient reference and as a primary education tool. Beginning with fundamental subjects and proceeding through the subspecialties, the BCSC emphasises the clinical applicability of scientific theory and principles. Includes high-quality illustrations and photographs, study questions and discussions in each text.

Fundamentals And Principles Of Ophthalmology

The texts in this series serve as a convenient reference and as a primary education tool. Beginning with fundamental subjects and proceeding through the sub-specialties, the BCSC emphasises the clinical applicability of scientific theory and principles.
