 An
 engagingly-
 written
 account of
 mathematical
 tools and
 ideas, this

book provides a graduate-level introduction to the mathematics used in research in physics. The first half of the book focuses on the traditional mathematical methods of physics – differential and integral equations, Fourier series and the calculus of variations. The second half contains an introduction to more advanced subjects, including differential geometry,

topology and complex variables. The authors' exposition avoids excess rigor whilst explaining subtle but important points often glossed over in more elementary texts. The topics are illustrated at every stage by carefully chosen examples, exercises and problems drawn from realistic physics settings. These make it useful both as a textbook in advanced courses and

for self-study. Password-protected solutions to the exercises are available to instructors at www.cambridge.org/9780521854030.

Advance pricing agreements or arrangements (APAs) are designed as a dispute prevention mechanism for transfer pricing related issues and provide certainty to taxpayers on taxation of cross-border transactions.

Since the APA procedure was introduced by tax authorities in the late 1980s, it has gradually taken hold worldwide and evolved along several dimensions with important characteristics . This book, the first exclusively dedicated to the global APA regime, provides a comprehensive, in-depth discussion of the APA concepts and procedures in twenty-five jurisdictions across Europe, Asia, Asia Pacific, North America, South America and Africa, noting the particular genesis, features, and progress made under each programme. The analysis covers such elements as the following: the types of APAs and their characteristics ; the main steps involved in an APA process; key advantages of APA programme and comparative study of the APA as a preferred dispute prevention mechanism over other dispute resolution mechanisms; key issues observed and in practice by various APA authorities worldwide inter alia involving, cost base of captive entities, resolution of transfer pricing issues involving intangibles, location savings, joint site visits, attribution of profits to PEs, APAs for small businesses, abbreviated procedure for renewal of APAs,

significance of economic nexus prior to the grant of APAs and other relevant issues; exchange of APA rulings equip tax authorities to quickly identify risk areas so as to curb Base Erosion and Profits Shifting (BEPS), which augurs well for the APA programme and is another milestone in its evolution process; APAs provide jurisdictions with an excellent platform to fostering a non-adversarial tax regime. The author includes an extended case study of India's APA programme, highlighting some of its conspicuous elements with equal focus on certain special characteristics of APAs in Australia, Canada, France, Germany, Ireland, Korea, The Netherlands, Poland, UK and the United States. Factors influencing speedier processing and suggestions on further improvement of APA programmes are also included. Numerous tables and figures illustrate all aspects associated with APAs. With more economies opening up and the worldwide implementation of the OECD/G20 BEPS Action Reports in an endeavour to combat BEPS, access and recourse to APAs is sure to grow. The Multilateral Convention to Implement Tax Treaty

Related Measures to Prevent Base Erosion and Profit Shifting (MLI) provides an innovative approach to enable countries to swiftly modify their bilateral tax treaties in order to implement measures developed in the course of the Base Erosion and Profit Shifting (BEPS) Project. MLI, the first successfully concluded multilateral tax treaty, provides jurisdictions with the tools they need to ensure that

profits are taxed where economic activities generating the profits are performed, while at the same time giving businesses greater certainty. MLI Made Easy makes it easier to get a complete grasp of this swift but complex modification process of tax treaties. This first and only self-contained book offers an unmatched article-by-article discussion of the MLI with an abundance

of practical examples, diagrams, and flowcharts to make the information easier to understand and apply. Focusing on measures to combat tax evasion and abuse of tax treaties arising due to artificial avoidance of a permanent establishment status, hybrid mismatch arrangements, and other aspects of taxation, the book includes an in-depth discussion of the following and more: how specific

gaps in existing bilateral tax treaties are addressed by the MLI; positions taken by selected jurisdictions and their impact on treaties; compatibility clauses, notification clauses, opting-in mechanisms, alternative provisions, and reservations; experiences in the course of implementation of the MLI; misconceptions and lingering doubts in respect of various

substantive and procedural provisions of the MLI; interaction between the principal purpose test and simplified limitation on benefits; improving dispute resolution; and meaning of the phrases 'on or after', 'other taxes', and interpretation of issues in entry into effect provisions. Adopted by a majority of jurisdictions worldwide, MLI preserves the tax sovereignty of

its Parties and has been successful in overcoming barriers to the conclusion of a worldwide multilateral tax treaty. Because this easy-to-use book immensely facilitates understanding and application of the treaty measures developed in the course of the BEPS Project, it will be of immeasurable use to practitioners and other professionals engaging in international taxation, as

well as to taxation authorities and interested academics in any part of the world.

The book has been designed for Science, Engineering, Mathematics and Statistics undergraduat

e students. A look at the contents of the book will give the reader a clear idea of the variety of numerical methods discussed and analysed. The book has been written in a concise and lucid style with proper explanation of Mathematics involved in each method. Each method is explained with solved examples, computer programs and their results as a screenshot of the graphic window and

console window. The careful organisation of figures, solved examples, codes, graphic window and console window help the students grasp quickly.
