### **Development of a Bridge Construction Live Load Analysis**

**Guide** McGraw-Hill Companies  
 Achieving greater energy security by reducing dependence on foreign petroleum is a goal of U.S. energy policy. The Energy Independence and Security Act calls for a Renewable Fuel Standard (RFS-2), which mandates that the U.S. increase the volume of biofuel that is blended into transportation fuel from 9 to 36 billion gallons from 2008 to 2022. This report examines how meeting the RFS-2 would affect various components of the U.S. economy. If biofuel production advances with cost-reducing technology, and petroleum prices continue to rise as projected, the RFS-2 could provide economywide benefits. However, the actual level of benefits depends on future oil prices and whether tax credits are retained. Illus. A print on

specifications and quality, and the second edition of the Automotive Lubricants Reference Book reflects the urgency of such matters by including updated and expanded detail. This second edition also considers the recent phenomenon of increased consolidation within the oil and petroleum additive arenas, which has resulted in fewer people for research, development, and implementation, along with fewer competing companies. After reviewing the first edition the authors have fully reviewed and updated the information to fit in with the changes in technology and markets.
