JACOB CABRERA

Focus on Neuropsychology Research Cambridge University Press

Neuropsychology is the study of brain-behaviour relationships and examines such domains of cognitive functioning as memory, attention, visual-perceptual abilities, language and intellectual function. It is strongly scientific in its approach and shares an information processing view of the mind with cognitive psychology and cognitive science. It is one of the most eclectic of the psychological disciplines, overlapping at times with areas such as neuroscience, philosophy (particularly philosophy of mind), neurology, psychiatry and computer science (particularly by making use of artificial neural networks).

To God Be the Glory BRILL

Looking at more than two hundred Italian medieval and Renaissance mural cycles, Lavin examines—with the aid of computer technology—the "rearranged" chronologies of familiar religious stories found therein. "Like many masterpieces, Lavin's book builds upon a simple idea . . . it is possible to do a computer analysis of . . . visual narratives. . . . This is the first computer-based study of the visual arts of which I am aware that illustrates how those technologies can utterly transform the study of old master art. An extremely important book, one likely to become the most influential recent study of art of this period, *The Place of Narrative* is also a beautiful artifact."—David Carrier, Leonardo "Covering over a millennium and dealing with the whole of Italy, Lavin makes pioneering use of new methodology employing a computer database . . . [and] novel terminology to describe the disposition of scenes of church and chapel walls. . . . We should recognize this as a book of high seriousness which reaches out into new areas and which will fruitfully stimulate much thought on a neglected subject of very considerable significance."—Julian Gardner, Burlington Magazine

In the past few years, interest in plug-in electric vehicles (PEVs) has grown. Advances in battery and other technologies, new federal standards for carbon-dioxide emissions and fuel economy, state zero-emission-vehicle requirements, and the current administration's goal of putting millions of alternative-fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles, such as lower operating costs, smoother operation, and better acceleration; the ability to fuel up at home; and zero tailpipe emissions when the vehicle operates solely on its battery. There are, however, barriers to PEV deployment, including the vehicle cost, the short all-electric driving range, the long battery charging time, uncertainties about battery life, the few choices of vehicle models, and the need for a charging infrastructure to support PEVs. What should industry do to improve the performance of PEVs and make them more attractive to consumers? At the request of Congress, *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers. This report examines the characteristics and capabilities of electric vehicle technologies, such as cost, performance, range, safety, and durability, and assesses how these factors might create barriers to widespread deployment. *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers. Through consideration of consumer behaviors, tax incentives, business models, incentive programs, and infrastructure needs, this book studies the state of the industry and makes recommendations to further its development and acceptance.

Environmental Health Perspectives Oxford University Press

New York's repertory movie houses specialized in presenting films ignored by mainstream and art

house audiences. Curating vintage and undistributed movies from various countries, they educated the public about the art of film at a time when the cinema had begun to be respected as an art form. Operating on shoestring budgets in funky settings, each repertory house had its own personality, reflecting the preferences of the (often eccentric) proprietor. While a few theaters existed in other cities, New York offered the greatest number and variety. Focusing on the active years from 1960 through 1994, this book documents the repertory movement in the context of economics and film culture.

Human Tissue Monitoring and Specimen Banking University of Chicago Press

Even before September 11, 2001, threat assessments suggested that the United States should prepare to respond to terrorist attacks inside its borders. This monograph examines the use of military medical assets to support civil authorities in the aftermath of a chemical, biological, radiological, nuclear, or conventional high explosives attack inside the United States. The authors focus on key questions, including under what circumstances military medical assets could be requested and what assets are likely to be requested.

Poole's Index to Periodical Literature: Fifth supplement, January 1, 1902-January 1, 1907 McFarland

One of the world's leading epistemologists provides a sophisticated, revisionist introduction to the subject In this concise book, one of the world's leading epistemologists provides a sophisticated, revisionist introduction to the problem of knowledge in Western philosophy. Modern and contemporary accounts of epistemology tend to focus on limited questions of knowledge and skepticism, such as how we can know the external world, other minds, the past through memory, the future through induction, or the world's depth and structure through inference. This book steps back for a better view of the more general issues posed by the ancient Greek Pyrrhonists. Returning to and illuminating this older, broader epistemological tradition, Ernest Sosa develops an original account of the subject, giving it substance not with Cartesian theology but with science and common sense. Descartes is a part of this ancient tradition, but he goes beyond it by considering not just whether knowledge is possible at all but also how we can properly attain it. In Cartesian epistemology, Sosa finds a virtue-theoretic account, one that he extends beyond the Cartesian context. Once epistemology is viewed in this light, many of its problems can be solved or fall away. The result is an important reevaluation of epistemology that will be essential reading for students and teachers.

Glorifies God in every aspect and situation of his life; From the cradle to the grave; Exemplifies the truth that God uses imperfect people to serve his purposes.

Focus On: 100 Most Popular 21st-century English Actresses Nova Publishers

Litigation and alleged cases of educational malpractice are on the rise. Headteachers and governors are more aware of legal requirements, but this new book addresses the needs of teachers. The book introduces a framework for safe practice, then the 'high risk' subjects of Science, ICT, Design and Technology, and PE and outdoor activities in separate chapters. The implications for classroom practice of recent legal developments are examined, and three more chapters look at what can be expected in the process of litigation. Sound advice for those wishing to make schools safer, and useful guidance for those having to deal with the aftermath of a safety problem.

Assessing the Power of HIV Self-testing in Unreachable Populations in Sub-Saharan Africa Balboa Press

This volume presents the proceedings of the International Conference on Medical and Biological Engineering held from 16 to 18 March 2017 in Sarajevo, Bosnia and Herzegovina. Focusing on the theme of 'Pursuing innovation. Shaping the future', it highlights the latest advancements in Biomedical Engineering and also presents the latest findings, innovative solutions and emerging challenges in this field. Topics include: - Biomedical Signal Processing - Biomedical Imaging and

Image Processing - Biosensors and Bioinstrumentation - Bio-Micro/Nano Technologies - Biomaterials - Biomechanics, Robotics and Minimally Invasive Surgery - Cardiovascular, Respiratory and Endocrine Systems Engineering - Neural and Rehabilitation Engineering - Molecular, Cellular and Tissue Engineering - Bioinformatics and Computational Biology - Clinical Engineering and Health Technology Assessment - Health Informatics, E-Health and Telemedicine - Biomedical Engineering Education - Pharmaceutical Engineering

The United Nations estimates that four billion people worldwide live outside the protection of the law. These people can be driven from their land, intimidated by violence, and excluded from society. This book is about community paralegals - sometimes called barefoot lawyers - who demystify law and empower people to advocate for themselves. These paralegals date back to 1950s South Africa and are active today in many countries, but their role has largely been ignored by researchers. Community Paralegals and the Pursuit of Justice is the first book on the subject. Focusing on paralegal movements in six countries, Vivek Maru, Varun Gauri, and their coauthors have collected rich, vivid stories of paralegals helping people to take on injustice, from domestic violence to unlawful mining to denial of wages. From these stories emerges evidence of what works and how. The insights in the book will be of immense value in the global fight for universal justice. This title is also available as Open Access.

Grupo Clarín DIANE Publishing

This book explains how things get organized and how routines emerge in businesses and business life. The chapters explore historical episodes in a wide variety of settings, and encourage a view of firm operations and development that is much more realistic, and much more practically helpful, than the standard economic perspective.

CMBEBIH 2017 Routledge

From its emergence as a modest newspaper to becoming the largest communication group in Argentina, and one of the main communications groups in Latin America, this book examines the media conglomerate Grupo Clarín. Guillermo Mastrini, Martín Becerra and Ana Bizberge analyze the group's corporate structure and the aspects that have contributed to its expansion throughout its history, mapping its stages of growth to the regulatory policies, cultural politics, economics and political history of Argentina over the last few decades. This book offers a compelling analysis of one of the key players in the Latin American communication and information market, highlighting how the conglomerate has continued to grow under various different governments - by achieving legal reforms and influencing policies - and continues to have great capacity to influence the policy and

regulation of the system, the market structure and cultural consumption in the region. This book is ideal for students, scholars and researchers of global media, political economy, and media and communication, especially those with an interest in Latin America.

Decisions and Orders of the National Labor Relations Board Routledge

The first decade of the 21st century witnessed an explosion in scholarly and public interest in women and Islamic cultures, globally. From misguided media representations, to politically motivated state manipulations, to agenda-driven Islamist movements, to feminist and international NGO projects - the subject and image of Muslim women has become iconic and riveting. This volume unpacks the representations, motivations, agendas, and projects by focusing on the advances in scholarly research on women and Islamic cultures in the first decade of the 21st century. The editors of the pioneering Encyclopedia of Women and Islamic Cultures bring together leading scholars, discipline by discipline, to critically analyze state of the art research on women and Islamic cultures from 2003-2013. Editors for this volume include Suad Joseph, Marilyn Booth, Bahar Davary, Hoda Elsadda, Sarah Gualtieri, Virginia Hooker, Amira Jarmakani, Therese Saliba, and Elora Shehabuddin. Contributors include Suad Joseph, Azza Basarudin, Heghnar Zeitlian Watenpaugh, Amira Jarmakani, Sajeda Amin, Kamran Rastegar, Robina Mohammad, Annika Rabo, Ahmed Ragab, Vanessa Hearman, Bahar Davary, Michelle Hartman, Hoda Elsadda, Nerina Rustomji, Amaney Jamal, Vickie Langohr, Hania Sholkamy, Zayn Kassam, Rachel Rinaldo, Samar Habib.

Photography and Focus R. R. Bowker

The first—and only—source to integrate the multiple disciplines and professions exploring the many ways people interact with the natural and designed environments in which we live. Comprising more than 250 informative entries, The Encyclopedia of Human Ecology examines the interdisciplinary and complex topic of human ecology. Knowledge gathered from disciplines that study individuals and groups is blended with information about the environment from the fields of family science, geography, anthropology, urban planning, and environmental science. At the same time, professions intended to enhance individual and family life—marriage and family therapy, clinical psychology, social work, dietetic and other health professions—are represented alongside those concerned with the preservation, conservation, and management of the environment and its resources. How rampant are eating disorders among our youth? Are AIDS educational programs effective? What problems do adolescents transitioning into adulthood encounter? Here, four leading scholars in the field have assembled a team of top-tier psychologists, sociologists, anthropologists, and other experts to explore these and hundreds of other timely issues.
