The events of your life, from local walks to exotic trips, can provide endless inspiration for textile art. This inspiring book shows you how to record your experiences, using sketchbooks, journals and photography, to create personal narratives that can form a starting point for more finished stitched-textile pieces. Acclaimed textile artist and teacher Cas Holmes, whose work is often inspired by

her life and the journeys she makes, helps you find inspiration through your own life and explains how to record what you see in sketchbooks and journals, which can often become beautiful objects in themselves. She explains how you can use photography, both as documentation and as inspiration, and sometimes incorporate it into the work itself, along with found objects and ephemera. Throughout the book are useful techniques that can be harnessed to add extra interest to your work, such as methods for making layered collages, how to 'sketch' with stitch, and advice on design and colour. If you want to create beautiful, unique work inspired by your life and travels, this is the perfect book for you.

From tissue-fitting pioneers Pati Palmer and Marta Alto comes a new book whose title says it all: *The Palmer/Pletsch Complete Guide to Fitting: Sew Great Clothes for Every Body! Fit Any Fashion Pattern*. It's been 20 years since their last book about fitting and altering sewing patterns, *Fit for Real People*. For Palmer and Alto, that means 20 more years of hands-on learning and experience from fitting more "real people" of all shapes and sizes from around the globe. Having long ago dispensed with tedious measuring or making a muslin to check the fit of a sewing pattern, the authors have mastered the process of tissue-fitting. This means simply "trying on" the pattern's tissue pieces to check systematically for where to alter the

pattern for a custom fit. The pattern pieces themselves become the "muslin." "Systematically" means following the tissue-fitting sequence they've developed and refined. It's a no-guess order of fitting that ensures success. The book reinforces this sequence since the alteration chapters themselves are ordered in the same sequence. Readers are instructed to start with length and width, move on to the back, check the neck and shoulders, all before even considering how the pattern fits in the bust. As they work through the pattern, sewers will alter the tissue and try on again until the tissue fits well. The book then instructs how to pin-fit the fabric for a final tweaking before sewing. The book explains all facets of pattern fitting and alteration to

give readers the background and guidance they need to achieve a custom fit on any pattern from any company. Instructions include: \* Take just one measurement to determine the right pattern size to buy. Find out what to do if you are between sizes or a different size top and bottom. \* Make a "body map" with a close-fitting dress pattern to see how you differ from the "standard" on which sewing patterns are based. \* Learn from "real people" examples of a variety of bodies and their individual alterations. \* Use the book's new "wrinkle dictionary" to identify a needed pattern alteration. "Wrinkles point to the problem," say the authors, and now you can look up the page reference for a solution. \* See how age can affect body shape, from preteen to octogenarian.\*

Take note of the latest sewing techniques for garment details that affect fit, such as darts, zippers and sleeves, for enhancing the look of a well-fitted garment.\* Learn basic skills for designing or redesigning for myriad variations using the same pattern. Throughout the book, step-by-step instructions are accompanied by full-color photography and a new style of technical art that is extremely clear. Short captions explain each illustration. As a bonus, the authors detail the evolution of ready-to-wear and pattern sizing over the past century, along with their own history in pioneering the art and practice of tissue-fitting.

Sewing with an Overlock Krause Publications

The CEO Handbook to cover the innovations and new developments in the textile machinery. This feature shall be a voice through which the machinery companies can narrate their story of innovations. They can present their innovative machineries and new development to the textile leaders through the medium of this print feature that will be circulated to CEOs and top decision makers of textile companies within India and South East Asia. This

feature will not only render visibility to their innovations but also act as a positive catalyst of success. In today's world, textile manufacturers need to keep upgrading their machineries to stay competitive. In fact, it is the latest machinery that drives the growth of the textile and garment industry by providing efficiency and optimisation in production. To meet customers' demands and needs, global leaders in textile machineries strive hard to come up with innovative and more efficient textile machines. The newer machines are intelligently designed to give maximum quality and optimum economic efficiency with outstanding features. The trends in shipments of machineries give an indication of which machineries are in demand. Shipments

of flat-knitting machines rose by 52 per cent, while deliveries of shuttle-less looms increased by 14 per cent year-on-year in 2015, according to the 38th annual International Textile Machinery Shipment Statistics (ITMSS) released by the International Textile Manufacturers Federation (ITMF). On the other hand, shipments in some textile machinery segments experienced declines in 2015. Deliveries of new short-staple spindles fell by nearly 8 per cent from 2014 to 2015. Shipped long-staple spindles and open-end rotors decreased by 61 per cent and 6 per cent, respectively. The number of shipped draw texturing spindles fell by 26 per cent and shipments for new circular knitting machines by 6 per cent year-on-year. However, 2015 was a very good year for

the segment of electronic flat knitting machines as global shipments grew by 52 per cent to 70,100 machines, the highest level since 2011. Not surprisingly, Asia received the highest share of shipments (93 per cent). China remained the world's largest investor for flat knitting machines in 2015. Thereby, Chinese investments increased from 19,000 units to 35,500 units. But, due to rising labour and production costs, textile and garment manufacturing is shifting, to a certain extent, from China. As a result, new plants are being set up in other countries, especially in Asia and Africa. This is where the new machineries would be in demand. 'Innovations in Machinery — The CEO Handbook' tries to explain the advantages of various machines that will

help technocrats in choosing the right machine. This volume is a collection of top most companies that inform readers about the latest innovations in textile machinery. It presents some of the leading machinery entrepreneurs from different textile verticals who have contributed to the textile industry with their innovations. New technologies and techniques in textile production are sure to draw the attention of top textile technocrats. Going beyond, this volume attempts to give a glimpse of the future of textile machinery and production. This handbook will reach the top technocrats in the textile and apparel organisations throughout the world. It will serve as an extensive source of information regarding upcoming technologies and innovations in the global textile

machinery industry.
