The ESP8266 is a System on a Chip (SoC), manufactured by the Chinese company Espressif. It consists of a Tensilica L106 32-bit micro controller unit (MCU) and a Wi-Fi transceiver. It has 11 GPIO pins \* (General Purpose Input/Output pins), and an analog input as well.

A Beginner's Guide to the ESP8266 - GitHub Pages

You can use all the APIs provided by Espressif in their SDK, just be sure to include corresponding header file (most of the time, you need "user\_interface.h").

Espressif has the SDK documentation on their BBS.API and Documentation - Everything ESP8266

The Espressif SDK is a bundle of utilities and device-level APIs for our ESP8266, ESP32 and ESP32-S2 series of wireless chipsets. Optimized precompiled libraries and ready-to-compile driver libraries reduce time to market, while ensuring freedom of customization. Our SDKs compile with the free-to-use Xtensa GCC toolchain.

ESP-SDK | Espressif Systems Overview ¶

A single ESP8266's flash can contain multiple apps, as well as many different kinds of data (calibration data, filesystems, parameter storage, etc). For this reason a partition table is flashed to offset

0x8000 in the flash. Partition table length is 0xC00 bytes (maximum 95 partition table entries). Partition Tables — ESP8266 RTOS SDK Programming Guide ...The ESP8266 Software Development Kit (SDK) is an Internet of Things (IoT) application development platform developed by Espressif for developers. It includes such examples of application development as Smart Lights and Smart Plugs. 2A-ESP8266-SDK Getting Started Guide ENESP8266-DevKitC is a small-sized ESP8266-based development board produced by Espressif. Most of the I/O pins are broken out to the pin headers on both sides for easy interfacing. Developers

can connect these pins to peripherals as needed. Standard headers also make development easy and convenient when using a breadboard.
