 The time was 1979. The place was Los Angeles, the city of angels. The new innovation was cable television and it was going to change everything. Carl and Clinton Galloway were young, black professionals, a doctor and an accountant, who realized that the power of cable television could transform lives. During the next ten years, the brothers' efforts to improve South Central involved such people as America's most famous black politician and the world's richest man. Cable Comes to South Central is the untold account of two brothers who tried to make a difference in Los Angeles's poorest community. From the back rooms of City Hall to the Supreme Court of the United States, here is the story of the Galloway Boys' struggle to bring the latest technology to the Los Angeles citizens who need it most. Along the way they learn that there are no angels in city hall unless you own a politician.

 Over the past twenty years more citizens in China and India have raised themselves out of poverty than anywhere else at any time in history. They accomplished this through the local business sector the leading source of prosperity for all rich countries. In most of Africa and other poor regions the business sector is weak, but foreign aid continues to fund government and NGOs. Switching aid to the local business sector in order to cultivate a middle class is the oldest, surest, and only way to eliminate poverty in poor countries. A bold fusion of ethics and smart

business, The Aid Trap shows how the same energy, goodwill, and money that we devote to charity can help local business thrive. R. Glenn Hubbard and William Duggan, two leading scholars in business and finance, demonstrate that by diverting a major share of charitable aid into the local business sector of poor countries, citizens can take the lead in the growth of their own economies. Although the aid system supports noble goals, a local well-digging company cannot compete with a foreign charity that digs wells for free. By investing in that local company a sustainable system of development can take root.

These events are sufficiently important to be incorporated into the body of the text rather than just added as boxed-off features. In particular, they stress the lesson policymakers recently learned the hard way: What happens in the ever-expanding part of the financial system that does not involve commercial banks is of vital importance to the entire economy. This exciting text presents students with the underlying economic explanations of why the financial system is organized as it is and how the financial system is connected to the broader economy. Due to the overwhelming success of their principles of economics textbook, Hubbard and O'Brien have employed a similar approach in this textbook: They provide students with a framework that allows them to apply the theory that they learn in the classroom to the practice of the real world. 0133148688 / 9780133148688 Money, Banking, and the Financial System Plus NEW MyEconLab with Pearson eText -- Access Card Package Package consists of: 0132994917 / 9780132994910 Money, Banking, and the Financial System 0133020002 / 9780133020007 NEW MyEconLab with Pearson eText -- Access Card -- for Money, Banking, and the Financial System

All students can relate to businesses they encounter in their everyday lives. Whether

they open an art studio, do social work, trade on Wall Street, work for the government, or bartend at the local pub, students will benefit from understanding the economic forces behind their work.

Essentials of Economics, Global Edition Amsterdam University Press

An informed argument for an economic policy based on bridges of preparation and adaptation rather than walls of protection and exclusion Free-market economists often have noted that there are winners and losers in a competitive capitalist world. The question of how to deal with the difficult real-life consequences faced by the losers, however, has largely been ignored. Populist politicians have tried repeatedly to address the issue by creating walls--of both the physical and economic kinds--to insulate communities and keep competition at bay. While recognizing the broad emotional appeal of walls, economist Glenn Hubbard argues that because they delay needed adaptations to the ever-changing world, walls are essentially backward-looking and ultimately destined to fail. Taking Adam Smith's logic to Youngstown, Ohio, as a case study in economic disruption, Hubbard promotes the benefits of an open economy and creating bridges to support people in turbulent times so that they remain engaged and prepared to participate in, and reap the rewards of, a new economic landscape.

"To change the way students see the world: this is my goal in teaching economics and in writing this book. Three facts about students are my guiding principles. First, they want to learn, but they are over-whelmed by the volume of claims on their time and energy. So, they must see the relevance to their lives and future careers of what they are being asked to learn. Second, students want to get it, and get it quickly. So, they must be presented with clear and succinct explanations. And third, students want to make sense of today's world and be better prepared for life after school. So, they must be shown how to apply the timeless principles of economics and its models to illuminate and provide a guide to understanding today's events and issues, and the future challenges they are likely to encounter. The organization of this text arises directly from these guiding principles"--
